NEWS AND INFORMATION FOR THE BUSY FARMER

Alsike Production
 Alsike has been a dependable seed crop in Ontario for generations but its production has declined sharply in recent years due to abnormal weather conditions. It would seem opportune to revive the production of this seed crop as market prospects for the future are good. Alsike has brought profitable prices for many years in the United Kingdom and the United States. Other European countries and New Zealand also buy Canadian alsike seed. It is reasonable to expect that good prices will continue for well-grown alsike seed reasonably free of weed seeds. This clover usually produces from 4 to 10 bushels per acre, and prices paid growers seldom have been lower than \$5 per bushel for average seed in the rough. The price in 1938 to the grower is about \$12.

Fertilizer Recommendations
 An Ontario Department of Agriculture publication, "Fertilizer Recommendations" looked upon by many progressive farmers as the most valuable of all booklets published by the Department from year to year, is just off the press for 1938 and ready for distribution free to every farmer. This important pamphlet of 20 pages can be obtained, Mr. Farmer, from either your Agricultural Representative, the Chemistry Department, O.A.C., or by writing Publications Branch, Ontario Department of Agriculture, Parliament Buildings, Toronto. Obey that impulse and write for it now. It will mean money to you this year in the opinion of prominent agriculturists.

The booklet does not contain any "hit or miss" information. It is the result of much careful work by the Advisory Board in conjunction with farmer users, government officials and manufacturers. It is considered the most reliable information on fertilizers in the province. Every single recommendation is backed by experimental data, in some cases gathered over a long period of years. It is checked and double checked by the Board, every member of which having been chosen for outstanding ability. One of the board's functions is "to examine experimental data from all reliable sources having to do with the use of fertilizers and methods of application, and to make recommendations justified by such data or by approved farm practices."

Space will not permit outlining the contents of the booklet in detail. The two pages on soil management and conservation of barnyard manure are distinctly worth while. You grow general crops? Well, you will find general fertilizer recommendations for barley, beans, buckwheat, corn, fall wheat, mangels, mixed grain, oats, peas, late potatoes, spring wheat, sugar beets and turnips.

Dairy farmers and beef men will eral pages are devoted to fertilizers to be placed on dairy and beef pastures as well as for hay crops. Several pages are devoted to fertilizers for market garden crops, while four pages are given to best fertilizer mixtures for grapes, raspberries, strawberries and tree fruits.

There is information for the tobacco farmer too, whether he grows flue-cured, burley or dark tobacco.

There is also valuable data on the home mixing of fertilizers; methods of application, and soil testing service. This latter service can be obtained at O.A.C., Guelph; Kemptville Agricultural School, Kemptville; Western Ontario Experimental Farm, Ridgetown; Horticultural Experimental Station, Vineland; Dominion Experimental Station, Harrow.

Ontario Potatoes in Ontario Markets

(By J. T. Cassin, Potato Fieldman)
 Why are Ontario Potatoes being discriminated against to the extent of 25c to 35c per bag on Ontario markets? Is it because potatoes of good cooking quality cannot be produced in Ontario? No.

But too many Ontario potatoes are poorly graded and have not good cooking quality, resulting from immaturity, frost injury and diseases. Many of the consuming public have been so dissatisfied with Ontario potatoes that they refuse to buy them. In Toronto some chain stores and many independents do not handle Ontario at all, others report that 75 per cent of their potato trade is with Maritime stock.

It appears that in October and November many potatoes affected with field frost, Fusarium Wilt and Fusarium Eumartii and poorly graded were rushed to market. They were unsatisfactory to the consumers and many of them turned to Maritime potatoes. The demand for Ontario potatoes has fallen off and many growers are receiving only 35c to 40c per bag while Prince Edward Islands are selling at 90c per bag in carloads on tract Toronto. Even

well graded Ontarios of good quality move slowly at 15c below P.E.I.'s because so many are afraid to buy Ontario potatoes. Confidence once lost is difficult to regain. At the present time some well graded potatoes are being offered with 75 per cent Fusarium Wilt and Fusarium Eumartii and some hollow heart and frost injury to make conditions worse.

There is very little that can be done this season to correct or improve conditions, but efforts should be made to make preparations for the 1938 crop.

Where seed potatoes infected with these diseases are planted in the soil these fields will become infected and another crop of diseased potatoes produced with results similar to those existing at present. The importance of using seed that is free from disease cannot be too strongly impressed upon potato growers. Farmers who have potatoes bearing these diseases should cook them when feeding them to livestock. If fed uncooked infection will be carried to the soil in the manure and succeeding potato crops will be infected.

The amount of certified seed potatoes in Ontario is very limited. There were less than 1,300 acres of potatoes that received and passed inspection in Ontario last year. This is less than 1 per cent of the Ontario crop. There were very few fields of uncertified stock that did not have these diseases in them. Much of the certified crop has been marketed for table use. Growers who need a change of seed should not delay in arranging for their supplies, while it is yet possible to get them.

District Representatives will be furnished with the names of certified seed growers and the varieties grown.

Ontario potato growers are losing many thousands of dollars by using seed that is disease infected. They are also encouraging Maritime growers to increase their acreage, when there is such a demand in Ontario markets for their potatoes. Forty per cent of the P.E.I. crop was planted from certified seed and less than 1 per cent of Ontario's crop. This very well explains the difference in price in Ontario markets. Diseased seed cannot produce good potatoes.

During 1937, the number of pure bred livestock registered with the Canadian National Live Stock Records, approved by the Dominion Minister of Agriculture, was 79,303.

MORTGAGE SALE

UNDER AND BY VIRTUE of the Powers of Sale contained in a certain Mortgage which will be produced at the time of sale, there will be offered for sale by

G. PHILLIPS, Auctioneer,
 at
PUBLIC AUCTION
 on
FRIDAY, THE 11TH DAY OF MARCH, 1938

at the hour of one-thirty o'clock in the afternoon at the farm of **JOHN A. LEEK**, three miles from Richmond Hill, Ontario, the following property; namely:

ALL AND SINGULAR that certain parcel or tract of land and premises, situate, lying and being in the Township of Markham, in the County of York, being composed of the East half of Lot 16, in the Second Concession of the said Township of Markham, containing 100 acres more or less.
