## "WELL BEGUN IS HALF DONE"

Little pigs, calves or baby chicks — the way they live and grow during their first few weeks goes a long way toward determining just how well they do later and how much money they make for you. Get them off to a good start and they will pay you both pride and profit — let them run into a setback and a slow start, and they will be a constant trouble and expense.

For the right kind of start, give them the right kind of starting feed — the particular Purina Startena built especially for their special needs at this critical time.

**PURINA PIG STARTENA** — Fills in the weak places in the sow's milk... gets your little pigs away to a "flying start". Gets them used to eating solid food before they are weaned—carries them through the weaning period and the first month after weaning without upsets or setbacks. Feed it dry, in a creep. If the little fellows don't take to it readily at first moisten the checkers with skim milk for a day or two, until they get the taste.

**PURINA CALF STARTENA** — The complete calf feed. Saves milk, saves work, saves time, trouble and temper. Helps cut down scours and other digestive troubles. Very little milk at any time — none at all (and no pails to wash) after the first 4 weeks. No mixing, no heating, no sloppy gruels. And it raises surprisingly good calves at surprisingly low cost... cheaper than you can raise them on milk, at present prices.

**PURINA CHICK STARTENA** — A completely balanced chick feed, the result of more than 20 years of experiment and experience with baby chicks. Famous in the past for greater livability, extra growth, heavier bone development, added strength and vigor — and tests on the "1940 Model" show 10% faster growth than ever before. Remember — there are many starting feeds, but ONLY ONE STARTENA!
