**A FASTER START
for little pigs
AT LOW COST!**
*Master Pig Starter gives a faster,
sounder start at Low Cost*

Your little pigs get off to a faster start because Master contains just the right ingredients in just the right proportion to start pigs right.

Your pigs get a sounder start because Master Pig Starter grows pigs naturally—does not force them. You'll never put weight on your little pigs at less cost than in the first 10-12 weeks. Master Pig Starter does the job and does it right — AT LOWEST POSSIBLE COST.

Put your next litter on Master Pig Starter. We will be glad to supply you from fresh stock. The cost per bag is very reasonable.

**WOODBIDGE COUNCILLORS
CHECK WATER INSTALLATION**

Woodbridge council Monday night ordered immediate action when Constable C. F. Lewis, Waterworks operator, reported one village waterworks subscriber had, without authority or extra charge, piped water from his own installation into 8 other houses and supplied water for 4 more. The revelation resulted from a probe ordered at council's last session. It was pointed out all the 12 houses are owned by the one subscriber who, the clerk asserted, had never received permission to pipe water into other houses.

Constable Lewis declared his investigation showed taps were installed right in the 8 houses. Urging action, Councillor John Watson pointed out local waterworks regulations forbid people giving even a pail full of water to a non-subscriber neighbour. In making his report Mr. Lewis declared the 8 houses enjoying a free "sub-service" are now tenanted the year round. Council agreed full responsibility for payment rests on the owner who made the installations, and they instructed Constable Lewis to so notify him immediately. It was stated the 8 will be subject to the \$15.00 yearly rate each, and 4 to the part year \$7.50 rate, totalling \$150.00 annually, less 20% off for prompt payment.

Responding to a Dept. of Municipal Affairs communication council decided to notify the department they see no reason for any change in the municipal election act.

Discussing the approaching annual road oil application to village gravel side streets, councillor W. R. Scott won support of council when he urged consideration of a new system whereby the roads would be given a tar and stone treatment annually. He argued the change might cost slightly more for a year or two but would result in eventual saving when a surface had been built up. Agreed on the "desperate condition" of some streets, council agreed to consider the change. The fact that the budget had already been passed, prevented adoption of a change this year, it was pointed out.

Council passed a by-law authorizing the borrowing of \$8000.00 for current expenditures if necessary. Complete satisfaction was expressed with the recent clean-out of the waterworks system.

Village accounts totalling \$172.96 were ordered paid, as were relief accounts amounting to \$10.41 and waterworks accounts amounting to \$95.09.

Completion of the annual planting of thousands of flowering plants has again made Knox Church Presbyterian cemetery, Elders Mills, one of the district's most beautifully cared for burial grounds.

**Wet Weather Brings
Changes In Seeding**

Ont. Dept. of Agriculture suggests grain mixtures for late seeding.

The continued wet weather of the past few weeks has delayed seeding of spring grains, particularly the low lying areas throughout the Province, and many farmers are now confronted with the problem of producing sufficient grain for their requirements. The growing of home grown grains is an important factor in profitable livestock production, therefore, this problem is a vital one at the present time, states John D. MacLeod, Crops, Seeds and Weeds Branch, Ont. Dept. of Agriculture, Toronto.

Mr. MacLeod suggests seeding the following grains and mixtures at earliest possible date, pointing out that only early oats should be sown in the oat varieties. He advises consultation with Agricultural Representatives who are familiar with local conditions.

ALASKA OATS: an early maturing variety with a thin hull, excellent quality, average number of days to maturity 100, sown at the rate of 2½ to 3 bushels per acre, does not stool to the same extent as other varieties, therefore heavier rate of seeding is recommended.

CARTIER OATS: matures about same time as Alaska, 10 to 14 days earlier than Victory and Banner, large, well filled kernels, sown at the rate of 2½ to 3 bushels per acre.

BARLEY: O.A.C. 21, rough awned, matures in approximately 100 days, rate of seeding 1½ to 2 bushels per acre. Velvet and Nobarb — are also good feed barleys. Nobarb matures about 5 days later than O.A.C. 21, which is one objection to sowing it at the present time.

OATS AND BARLEY MIXTURE: 1 bushel of Alaska, Cartier or O.A.C. No. 3 and 1 bushel of O.A.C. No. 21 Barley, sown at the rate of 2 bushels per acre is recommended. In this connection the following O.A.C. experiment is interesting. In a 6 year period 1 bushel of barley and 1 bushel of early oats by weight (82 lbs.) gave an average yield of 2047 pounds per acre. Oats and barley should be cleaned separately and then mixed. In a pamphlet published by the Agricultural Supplies Board, the rate of seeding of this oat and barley mixture is 50 pounds of each per acre.

BUCKWHEAT: may be sown up to the middle of July in many sections of the Province and is entitled to a place of considerable importance among coarse grains. It is an excellent feed for livestock and is usually sown at the rate of 1 to 1½ bushels per acre.

BARLEY AND BUCKWHEAT MIXTURE: is sown by many farmers, good yields are obtained and the barley helps reduce the difficulty often experienced in harvesting a crop of buckwheat when sown alone. The following rate of seeding is recommended: Barley 1½ bushels, buckwheat 1 bushel.

**The Weed of the Week,
Small Seeded False Flax**

Small Seeded False Flax, a winter annual weed, may now be observed in fall wheat fields throughout the Province, states John D. MacLeod, Crops, Seeds and Weeds Branch, Ont. Dept. of Agriculture, Toronto. The life history of this weed is similar to fall wheat which is also a winter annual. Plants start growth the previous fall, live over the winter and produce flower and seed early the following year.

This weed has a branching stem and the lower leaves are long on short stems, whereas the upper leaves clasp the stem with arrow shaped bases. The flowers are pale yellow and very numerous, small reddish brown seeds with a small whitish spot at the small end and may be found in pear-shaped pods each on a slender stalk.

An average plant of Small Seeded False Flax may produce 40,000 seeds. These may be easily removed from fall wheat, but in clover and grass seed they are difficult to remove.

This weed does not give serious trouble where a short rotation of crops and thorough cultivation is practised. Sow spring grain instead of fall wheat and seed down with a good hay mixture.

If the field is very badly over run, plow lightly as soon as the crop is harvested. Harrow and cultivate frequently throughout the autumn to destroy young seedlings. This autumn cultivation must be thorough. Spring grains may be sown the following year, seeded down or a hoed crop might be planted and cultivated thoroughly.

At the Gardhouse reunion at Thistleton on Saturday, Deputy Reeve David J. Lammy of Toronto township was appointed president succeeding John Speirs of St. John's, Que.

Anniversary services at Lasky United Church last Sunday were conducted by the Rev. Dr. William MacTaggart of Toronto and the Rev. W. A. Wescott of Temperanceville.
