The Road Ahead...

Canadian Agriculture, giving as it has such abundant evidence in these days of prodigious war needs, of its ability to furnish ever-increasing quotas, is yet going to be faced with greater production programmes in the days following the liberation of the occupied territories of war-torn Europe. There is perhaps no other single factor that has so greatly assisted the Canadian farmer to accomplish such record achievements as that of modern machinery. United with the farmer, in the job of continuously improving and increasing the

efficiency of his methods of production, is the Massey-Harris combine.

Massey-Harris, always a leader in the introduction of time and labor saving equipment, has made another notable advance with its self-propelled combine which has revolutionized harvesting methods.

The self-propelled principle introduced in the Massey-Harris Combine opens up a world of possibilities in the future trend of farm machines for the road ahead.
