DEPARTMENT OF HEALTH TOWNSHIP OF NORTH YORK

GOOD NEWS

In 1899 the mortality rate from infectious diseases was approximately 20% while in 1949 the rate has dropped to less than 2%. Examination of the statistics of each separate disease shows that this decline began in 1920 and was coincident with the marvelous improvement in general health and nutrition of children, through the discovery of the importance of vitamins in nutrition.

Immunization against many communicable diseases, more and earlier attention to initial sickness and discovery of many new valuable drugs have all contributed to the happy result of reducing the mortality rate from 20% to 2%. CARL E. HILL, M.D., M.O.H.
