Yugoslavia Treats Children Against Mycosis

Mycosis, a highly contagious fungus infection of the scalp, reached near-epidemic proportions in certain areas under wartime conditions. In Yugoslavia, the World Health Organization and the United Nations International Children's Emergency Fund joined with the Government to strike at this disease which, unchecked, results in permanent loss of the hair. Trained technicians, working with UNICEF-supplied X-ray equipment to remove fungus-infected hair, are effecting rapid cures. Pictured above, hospital workers remove remaining hairs from children's heads after zinc-oxide treatment.
