## Picture News from C-I-L

**EXPLOSION IN MINIATURE!** It happens frequently these days in the Montreal plant where Sabre jets are made. Worker is using explosive rivets on a wing section. Developed by the chemical industry to speed up riveting operations, especially in hard-to-get-at places, they contain a tiny explosive charge which fastens the rivet when fired.

**SUPER-SOFTNESS** is a "must" in everything that touches baby's tender skin. For bath-time, mothers find that C-I-L Cellulose Sponges are just the thing — wonderfully soft and absorbent. Available in smart colours — blue, green, coral, yellow and natural.

**SWEETENING UP** the air under sinks is done differently today. The modern homemaker's helper is the aerosol — a new type of package that dispenses deodorants, fly-sprays, paints, shave-cream just by pressing a button. "Freon" is the chemical propellant that makes this handy method possible.

#### Did you know?

C-I-L products are making mighty contributions to Canada's air defence. In addition to explosive rivets for the F-86E Sabre, chemicals, nylon, "Cellophane", play a vital role.
