FAST WORKERS, THESE ACIDS

In a matter of a few minutes after eating, food particles start to form the acids that cause tooth decay. These particles lodged in the crevices of the teeth, can be removed by a simple brushing — much more economical and less painful than having a filling. If it is not convenient to brush the teeth immediately after eating, the mouth should be rinsed with water. The important thing is to remove those destructive acids in time.

DISASTER AT SARNIA!

The devastating tornado struck suddenly, causing millions of dollars' damage in minutes — a fearful example of the power of nature.

Most fire insurance policies provide protection against windstorm damage for a nominal additional premium. Wind damage in Canada is not uncommon, and Fire and Casualty insurance companies pay many windstorm claims each year. Tornadoes such as at Sarnia are fortunately rare.

Claims paid resulting from the Sarnia tornado totalled approximately \$3,000,000 — an example of how the small contribution by the many who want protection provides full indemnity and compensation for those who do suffer loss.
