CAN SPORTS AND SCHOOLWORK BE COMBINED?

One of the greatest problems facing those young athletes returning to school is the school versus sport problem. Parents, young athletes, teachers and coaches all appear to be vitally concerned with this important question: "Can enthusiastic sports activities be successfully combined with schoolwork?"

Most educators interviewed during a Sports College study on this problem were of the opinion that sports and schoolwork could and should be combined. They believed that it was not the attempt to combine these two activities that caused trouble but rather a lack of character, organization and proper attitude on the part of the student.

In investigating the role of sports activitiy in academic failure some 300 cases of actual failure was analyzed. Of these, sixty (20%) could be blamed on too great a concern with sports activities. Study shows that it is not so much the actual time spent practising or playing that causes the trouble but rather the time it takes the average student to reach a practise or game and to get home again. The usual procedure is to stand around afterwards and talk things over in the clubhouse with the other athletes.

The solution is obvious! The student-athlete must sharpen up and organize himself so that he will be able to have his cake and eat it too.

One of the factors in this problem of sufficient time for sports and schoolwork is the technique the student uses in his academic. Above all, he should avoid the common habit of coasting easily throughout the term and then cramming for exams.

The smart plan for the student active in sport is to get as much from every day's school work as possible, keeping up to his study obligations as they are handed out to him. Then he will be in a good position at exam time - the same as an athlete who has lots of "condition" to use when the going gets tough.

The student-athlete has another serious problem in some ways the most serious - that of "energy". This problem is created when the student takes part in a hard practice or game and then finds out he is too tired afterwards to study. To help your body recover from fatigue make sure you get enough sleep. Another essential aid in recovering from fatigue is maintaining a proper diet. The after-activity meal should be high in proteins (lean meat, whole grain bread, milk and cheese) and fresh fruit and vegetables should be included for the vitamin content and the alkaline ash they produce. Actual tests show that when proper technique is used school and sport can be effectively combined to the detriment of neither. Good examples of how this problem can be solved are Dr. Roger Bannister and John Landy the only two four minute milers in the world. Both are not only outstanding athletes but during their recently completed scholastic careers, were brilliant students.

WANTED SOMEONE WHO WANTS TO MAKE MONEY

The House of Stone, Canada's oldest and finest makers of custom tailored clothes, requires a representative in this area. The representative selected will be either an aggressive men's furnishing store, a salesman presently calling on the public in another line such as insurance, or a service store such as a dry cleaning establishment. There is no investment to make and handsome dividends await a full or part time representative. You have everything to gain and nothing to lose by inquiring for details. Write to: The House of Stone, 160 John Street, Toronto, Ontario.

AT ITS BEST!!

We're not very often asked idle questions. But we're often asked idling questions.

You'll see what I mean in a minute.

People who like to look after their cars are often in quite a quandary about how to warm them up, especially on cold winter mornings.

They've been told that idling a car engine brings large amounts of oil into the cylinders, fouls the spark plugs and puts carbon on cylinder heads. All this is quite true.

They've also been told that running the car before it is warmed up causes a great deal of wear because the oil hasn't had a chance to coat the moving parts and because the metal hasn't been warmed up to fit into place exactly right. All this is also quite true.

So what do you do? You get engine wear if you do and you get engine wear if you don't. And this is the real engine wear that can cut your car's life in half.

Well, there is an answer. I think the best way is to turn the engine over at first just a little faster than idling. This defeats most of the objections to idling, and the wait won't be

Then, if you can, try to move the car easily at first, avoiding any great loads and keeping the speed down until normal operating temperature is reached.

So the answer is not to idle and not to gun 'er. Warm it up with your foot softly on the pedal

Finding a car in the first place is the knottiest problem of all. But most of the problems are eliminated when you find an established lot with a good name it has to keep, and with factory-trained mechanics who've been over every inch of every car before it was ever put on display-our place, of course.

Take a demonstration drive in one of these and see what we mean when we say thoroughly recondition-
