Parents' Night

An unusually large group of parents turned out for parents' night at the Jefferson school last Thursday evening. Miss Audrey Leary, the school principal, said it was the best attendance she had seen yet.

The classrooms were decorated in many colors with the various children's projects ranging from evergreen collections to surrealist paintings.

A display in the corridor featured the new electric Singer sewing machine which had been purchased and donated by the Community Club of Jefferson. Many sizes and colors of knitted mitts were also evidence of the successful new domestic class conducted for the senior girls by Miss Leary.

The older boys are also getting practical manual training and a dozen mothers will soon be getting new and beautifully made knick-knack shelves. These classes are under the supervision of Mr. Harry Hunt.

Mrs. Burns and Miss Dennis also have their classes well in hand and reported good progress for their pupils.

CARS ARE MY LINE
By Bud Lauria

I'll bet you don't know whether the gas you're using is 83 octane or 85 or 91 or what have you.

The octane rating number of gasoline isn't a figure you use every day—in fact most people never pay any attention to it—but when they do notice it, a lot of folks wonder why octane number in Canada always lags behind the United States.

We do, as a matter of fact, lag behind the U.S. in the octane rating of our gasoline. This has always been true, and there's a good reason for it.

In 1930, for instance, the national average in the States was 73 octane while it was 71 in Canada. In 1940 it was 83 in the States and 81 in Canada; in 1950 it was 90 and 88 and today it's about 94 and 93.

This higher octane has been needed as the horsepower of cars has climbed through the years. Horsepower is increased, usually, by increasing the compression in the cylinders, by making the pistons pack more air and gas into a smaller space.

The gasoline served at the pumps, however, must make all cars perform well, old ones, new ones, and in between ones, so the gas companies have to strike a happy medium that will suit all cars well. There is a larger proportion of high-compression cars in the U.S., so they get more high-octane gas.

Well, that's enough of my "gas" on gas. You need a good car to put the gas in, no matter how high its octane. And around here, we know, we have the highest rating for used cars that are dependable, economical and real values.
