Ken Watson On Curling

Golfing Curlers Face Difficult Transition

Relax the fingers in gripping the rock.
by Ken Watson
(Canada's "Mr. Curling", Ken Watson of Winnipeg, is covering the Canadian curling scene for "The Liberal". This is another in a series of 20 articles.)

Today there are many golfing curlers or curling golfers in Canada on the fairways in the summer and on the ice lanes in the winter. One problem that must confront most of them, and has certainly intrigued the writer, is how a scratch player in golf can make the necessary transition from the orthodox grip on his number one wood to that on the handle of a curling stone. The two are as opposite as David and Goliath.

Any aspiring Sam Snead on his local golf tees knows that a firm grip on the shaft is necessary to get that little rubber pellet well down the fairway; whereas in curling a loose almost feathery grip is necessary for broom and weight accuracy. I should know, for with my loose grip on the shaft of the driver my partner often asks me after one of my short drives, "why don't you remove that hot water bottle from the end of your club?"

The only resemblance between the grip of the right hand on the handle of a curling stone and that on a golf club is the evidence of three knuckles of the fingers and the position of the thumb on the left side of the shaft. From here on any similarity is purely coincidental. Note the relaxed digits of the player on the handle in the accompanying photo. There is no pressure evident here. The index finger is the dominant and guiding force because it is tucked in close to the turn of the goose-neck to counterbalance the weight of the stone during the swing. The thumb of the right hand presses slightly against the side of the handle; but it does not pinch hard against the shaft as in golf swing. The last three fingers are tucked gently together toward the end of the handle. To allow them to take over during the swing would be suicidal. They act simply as an extension of the finger cradle in which the handle rests. The palm of the hand is never in contact. The handle should rest on the second joint of the fingers to avoid any interference during the pendulum motion when the rock is pulled back then swung forward. Resist any temptation to tighten the
