Character In Handwriting (9)

Caution Is Recognized

By Alex Sjöberg (CGA-IGAS)

According to the dictionary, caution implies the promptings of fear for oneself or others and the exercise of forthright so that risks may be avoided or minimized. It embodies normal suspiciousness. Don't confuse caution with circumspection, which suggests less fear and stresses judgement. There is a difference between being cautious and wary, because wariness emphasizes suspicion and cunning. And remember that you can be cautious without being chary, which implies excessive caution which has about it a neurotic overtone.

ran, ran
y y y
g h

In this week's handwriting specimens, look at the words "he ran, ran," and then note the long dash following the final "ran." If you use such straight dashes at the end of a line to fill out the margin of a page, you know that caution is an element in your nature.

Whether caution is good or bad depends on evaluation. And while we're at it, let's have another example of evaluation. A person's writing may show judgment, philosophy, some conservatism and practicalness. While there will be no caution strokes in the writing, when we evaluate these above mentioned traits we can assume that he will be cautious nevertheless.

There is no caution in the writing of this columnist, and yet he is cautious. He has had to learn to control his emotions, to allow for a cooling off period, to remember that he often thinks too rapidly and deceives himself. He has developed caution, but again his writing would have to be evaluated to find it.

Caution combined with lack of generosity can be a distinct liability, because such a trait-combination will prevent the writer taking advantage of opportunities. In the writing of the highly emotional, devil-may-care person, caution as seen in this specimen can be the needed stabilizer without which the writer could lay himself open to risks with probable painful consequences.

We know a man who uses many caution strokes. Consistently. He is emotional, easily hurt, and used to talk too much too soon. To avoid being hurt he developed caution. Life is less painful for him.

A businessman who had inherited a thriving concern from his father once interviewed us... cautiously asking about our... He was far from stupid but felt he was "missing the boat." His writing revealed strong cautiousness which, acting on his practicalness, made him far too practical. A long talk elicited the information that for the first 25 years of his life he had been overshadowed by a domineering, rather reckless parent. He was enabled to see clearly what it was that had happened to him. He analyzed the situation. A year later his handwriting had undergone a startling change. He was much less cautious, less self-conscious. His self-reliance strokes in the signature were a joy to behold. He was moving ahead business-wise at a brisk pace. When he interviewed us the second time he did not bother to ask about the fee.

G.A. Question Box

T.T. You must distinguish between ability and capacity. Ability is a developed power. Capacity is a potential or inherent power. Ability means the power to perform. It represents faculties. Now, aptitude is the ability to use a faculty, such as the hands, for example. While you may have the ability to read rapidly, you can have the capacity to learn. There is a marked difference between ability and talent. It is said we all have ability in one or more direction but few of us are endowed with a talent. A person has talent when he has a surplus development in a specific field of endeavour.

A typed, confidential 350-word character analysis can be had for the nominal sum of \$2. Submit a one-page letter, in ink if possible, to the G.A. Department, "The Liberal," Richmond Hill, Ontario. Allow one week for the analysis. (Copyright)
