Inaugural Meetings

Municipal councils of the district will hold inaugural meetings next week, and as the newly elected representatives officially assume office, we extend to them our sincere best wishes for a successful year.

Municipal councils in this area will face many problems in 1961, and not the least of these will be the task of holding the tax line. Taxes in recent years have been increasing at a rate which to many property owners is alarming. New development and increased population make increased demands on the public treasury, and of course essential services must be maintained. However council members in 1961 must bear in mind that there is a limit to the load the home owner can carry in the way of municipal taxation.

We hope municipal councils early in 1961 will resolve that for this year anything in the way of "frills" will be eliminated from the municipal budget. In our private lives there are many luxuries everyone would like to have, but if we can't afford them, we just have to do without. It is exactly the same in our municipal business. There are many improvements we would like to have, but if at the present time it means raising the tax rate, we must stop and consider whether or not we can afford it.

This policy would mean that councils will have to say "No" to many requests and delegations in 1961. Richmond Hill tax rate increased by seven mills in 1959 and another seven mills in 1960. We do not want another seven mill increase this year.

If ratepayers are sincere in their demand for a holding of the tax line

they will have to co-operate with their elected representatives and refrain from making excessive demands. If they do not co-operate and persist in making demands for expenditures council members must have the courage to say "no". A good case can be made for many new projects in the coming year, but we believe next December the ratepayers will be inclined to endorse those members who this year say "no" to all but

the necessary expenditures. In Vaughan a new reeve takes office and with the newly elected council faces the problem of clearing the air of the disturbing rumors and charges which featured the recent municipal election. They should investigate all phases of township administration without fear or favor and make a clearcut statement to the ratepayers.

A new reeve takes over in Markham Township and in Whitchurch, and the veteran ex-Warden William Hodgson carries on in King. There are many new faces on the municipal councils and on the trustee boards of police villages. All will have difficult problems to meet in the coming year, and in their deliberations we hope they have the sympathetic understanding of the ratepayers. Too often all we give to our elected representatives is criticism and abuse. If we want the best in municipal government, and that's just what we do want in 1961, we must do better.

Let's give our elected representatives all the help and encouragement possible in the coming twelve months. They're doing a job for us, and one which many times to them must seem a thankless one.

Why Wait For Spring?

It is sometimes useful to remind ourselves that our community is not really made up of streets, houses and ousmess buildings - it is made up of people. You and I are the community. In our society, this is especially true in the economic sense. We all depend on one another to some extent economically, and all of our economic activity, such as the buying and selling of goods and services, has a direct bearing on the welfare of our community and of the people in it.

Each winter, partly because of the cold weather and partly because of habit, economic activity in this community slows down and some of our wage earners join the ranks of the unemployed and unable to make their normal economic contribution, the whole community suffers.

Now, what can you as an individual do about it?

As a householder you can arrange to have all types of inside work such as renovation, redecoration, repair, and other maintenance work around your home, including dry-cleaning, done during the winter months.

Roy C. Sharp, former chairman of the Toronto Board of Education, is credited with saying, "We have only now come to realize that what happens in the university depends largely on what happens in the elementary school."

And as a result of this 'realization' educators and interested onlookers see far-reaching changes taking place or getting started in Canadian schools during 1961.

Perhaps the greatest change will be felt in the high schools, where increased attention will be given to the needs of 15- to 18-year olds; present high school organization; its curriculum, and courses of study. The present, highly criticized Grade 13 will also come under close surveyance, since a move to shorten the present secondary schooling requirements for Grade 12 has already been bandied about, in order to offset the high percentage of failures in this "cram grade", which has been likened to a memory course rather than a study course.

Should Grade 13 be disposed of, the equivalent year of schooling would then be spent on higher-level studies thus dispensing with the present frantic pace this grade has experienced in the past.

In 1961 on every side, budgets for school costs will rise higher again this year - and for many years to come to meet the also rising debt charges for school construction and larger payrolls for increased teaching staffs and builtin-salary increments. This is unavoid-

Greater stress will be laid on providing more and better technical and vocational schools, for those students

As a member of a community organization you can urge your group to schedule any construction with which it may be concerned and any other type of work for the winter months and influence others to do likewise.

These are some of the things you can do and we think you will find that it is to your advantage to do them in the winter. Skilled tradesmen, not so rushed in the winter months, can often do better work. Discounts are often offered by firms to increase winter business. There are other advantages to increasing winter work, but I am sure that many of them will occur to you if you think about this problem. The main thing is that by giving your full support to the local Winter Employment Campaign, you are helping your community.

And, if you are in need of help to carry out a home improvement programme, call your nearest National Employment Office.

Home Improvements can be financed by Home Improvement Loans avail-

able through your local bank. Our Canadian Schools In 1961

who are not, nor ever will be, 'university material' - particularly at the level of the Ryerson Institute of Technology. Facilities for the re-training of workers will also be dealt with.

Apropos of the latter - yet pointing up the new era we have entered -Nicholas Mendziuk recently complained in the House of Commons, "farming is so mechanized that farmers who can afford help can't get it - hired men are too inexperienced to handle the machines or themselves with safety." He compared the days when a 'green' hiredman could be shown how to milk a cow or cut down a tree, then left on his own to do so - "but with diesel and gasoline tractors, bulldozers, combines, milking machines and trucks, farming now requires re-education," he concluded.

In 1961 something will probably be done about the mounting agitation across Canada for a uniform course of study for elementary and secondary schools and particularly for primary grades, and, failing that, for uniform textbooks in Canadian schools in certain subjects - such as history.

Programmed learning will also come under study. Programmed learning is when the student reads a short question and fills in a blank answer space at the end of the question; he then turns to the answers given, to assess for himself if he or she is ready to

proceed to the next step in learning. And although many researchers have given up 'teaching machines' as fads and have turned their attention back to book learning, it is predicted the teaching machines will have renewed

interest in 1961. It all condenses into the question

- "What methods of teaching are best?"

"A Pipe Draws Wisdom from the Lips of a Philosopher . . and Shuts Up the Mouths of the Foolish". (Thackeray)

Among the Fearless Forecasts for 1961, is the unusual prediction: This is going to be a Great Pipe Smoking Year. The prognostication is supposed to indicate more than just Dad enjoying his Christmas Briar.

The students who delve into the undercurrents of human behaviour say it has real significance. It almost portends a peaceful year! Even though the ending of 1960 must have looked pretty shaky to them. But they have their reasons . . . pipe smoking rises and declines sharply in a ratio to world stress. Its last low was during World War Two. But as the Head of the Pipe and Tobacco Council pointed out:" Who can smoke a pipe in the tail turret of a B24 Bomber?" But he insists that pipe smoking follows the pattern of world tension and falls off sharply when men and countries are nervous. But now it is on the upsurge and the sale of pipes and pipe tobacco is expected to reach its highest peak in fifteen years, during 1961.

They predict, while men draw on their old seasoned pipes, they become mellow and friendly and at Peace with the World! So, Mr. Khruschev and Mr. Castro . . . put that in a pipe and smoke it!

And now we have the Image of the 1961 Man . . . rugged, masculine, his pipe clenched firmly between his teeth, attacking the world problems in an unhurried sort of way.

If pipe smoking is going to be the 'Thinking Man's' pastime this year, I decided I should know a little more about it and asked my brother-in-law, who has never been moved by the rise and fall of the tide of pipe smoking, but with constant respect has puffed away at the various seasoned companions of his leisure hours and as a result has a fair knowledge of their points of

And now I wish I could call in all the pipes I have so blithely given away for presents. They probably have done more to disenchant the neophyte pipe smoker than all the anti-smoking propaganda that could be thought up.

First of all, they just didn't come from the right tree. The Best Briars, so I am told, come from the craggy mountains along the Mediterranean and are hand hewn from the gnarled roots of the White Heath Tree . . . and all the time I thought 'Briar' was just another tobacco, that battled it out in big letters for top honours with 'Old Chum' on the side of a barn.

But no, this hardy old root, subsisting on almost nothing, seems able to take any amount of early hardship and finally emerge as a shining pipe bowl. A close relative to Corning ware, it can be heated, cooled, dampened and dried and still retains its original lustre. But after its tough start in life, it is given the tender treatment by people like the famous Dunhills. The roots are soaked for months in olive oil, dried and shined with the loving care of a French Polisher to bring out the grain in the knot of wood. If you like the burly look and rough finish on your pipe, you can have that too, from the Shell Briar.

But the outside finish has little to do with the Good Smoking Qualities of a pipe. Just so long as it is not varnished on the inside! But like a pony, it is how they are handled and brokenin from the initial stage, that makes them good. I am told this 'breaking in' is done with as much thought as the first mileage is run off on a car . . . and that it is a labor of love.

So don't whisk off your husband's new pipe to the "Speedy Pipe Breaking Service" . . (and there is such a service). He will want to save this ritual for himself.

The experts say a new pipe should be half filled and smoked for only a few minutes a day, then cleaned with a pipe cleaner and set aside. And at no time should there be more than an eighth of an inch of carbon formed on the inside. Some men rub honey on the inside of the bowl for a distinctive sweet taste.

They warn too it is an insidious hobby and will ensnare you and very soon you will learn that true enjoyment of pipe smoking comes from having a different pipe for each day of the week -Monday, meerschaum; Tuesday, corncob; Wednesday, briar until someday you may even find yourself exploring the mysteries of a Turkish water pipe.

You are not through with the choosing of a pipe. There is the great world of tobaccos to discover. Literally thousands of since her arrival in South Africa blends from all corners of the earth.

Some like it hot - some like it cool and because things are seldom what they seem, it seems, the mild mixtures amoke 'hob' and the strong mixtures are cool with 'less bite'.

If you want that personal 'Especially For You' blend, you had better not do it yourself - for the best results let the experienced tobacconist play around with the Burleys, the Virginias, the Latakias and the Periques. They will come up with something as personal to a pipe smoker as a perfume is to a

If the forecasters are right and smoking a pipe may really mean a trend toward peace - I'm on the 1961 Pipeline - besides, "I love a man who smokes a pipe"
