Keep Away From Disaster Areas

One of the several lessons that can be learned from the Maple holocaust is that the public should refrain from flocking to a disaster area. Following the devastating explosions Saturday evening people from a wide area beseiged Maple from every direction. Police reported they were from as far away as Lake Simcoe and Oshawa to say nothing of the large number from Metro itself.

The large number of parked cars on the Maple Sideroad made it impassable and the Richmond Hill Fire Brigade had to lose valuable time trying to reach the disaster area via an alternative route. When disaster strikes trained personnel are needed

without delay. Jamming the highways with people and cars can only result in greater human suffering and property damage. The police have to throw up roadblocks around an area in order to keep the curious from hampering rescue operations. Regardless of how many times they are warned a great many of our citizens seem intent on rushing to the scene of a tragedy. Actually the matter of life and death are involved and people should remain put and let those specially trained to handle disasters move quickly and easily to the area. People who impede the efforts of police and firemen should be dealt with firmly in the courts.

No Comparison

Police ghost cars will now patrol our highways in search of traffic violators. The decision to use such a means of curbing speeding violations was made recently by the Ontario Police Commission.

Presently, because of insufficient staff, the Ontario Provincial Police have been forced to provide service selectively and have not been able to patrol all accident prone areas. Thus, the commission under the chairmanship of Judge Bruce J. S. MacDonald have chosen an alternative to additional staff - the use of unmarked cruisers.

Our traffic officers will now assume the role of spies in disguise, furtively waiting for highway criminals to break the law.

In his monthly report, OPP Commissioner W. H. Clark stated that an effective patrol system was the surest way to reduce accidents. We are inclined to agree.

But the police commission say such a system would prove too costly. The last special traffic squad operating within the OPP was disbanded in 1940 for this reason. Yet today in 1962, with our traffic volume mounting by leaps and bounds, it

would seem obvious, that such a squad was essential.

A comparison of property damage caused by accidents on our highways and that of the entire budget of the OPP, shows the latter greater by several times. It is impossible to compare the loss of life that occurs almost daily, with the necessary funds for the operation of a special traffic patrol. In view of these facts it seems inconceivable to term the operation "costly".

The only effective deterrent to traffic violations is the use of regular patrols in marked cruisers manning all our highways. The familiar sight of the black and white patrol cars is in itself, reassuring to motorists. It's a welcome sight indeed to the stranded driver miles from the nearest service station. Lastly, the familiar police car patrolling the highway has a sobering effect on the driver with the heavy foot.

The solution to slaughter on our expressways must be found regardless of the price we must pay for such measures. It is doubtful that the return to a system once discarded is the answer. The problem still remains.

The Need Is Great

A sad but logical conclusion was reached recently by the Ontario Committee on Children at a Toronto conference. Child creativity is contrary to the modern world's materialistic outlook, said Dr. Keith S. Armstrong, director of the Canadian Council for Crippled Children and Adults.

The 50 child development experts present at the conference agreed the stress today is placed on the monetary value of work. We as a whole tend to look upon the remuneration as the chief end to man's existence.

This trend toward emphasis on monetary values is being reflected in the present legislation governing funds for vocational training and placement of displaced persons. In his address. Dr. Armstrong stated that the federal government argued time and money spent in this kind of training would be repaid by the trainee many times through income +ax once he was employed.

A desperate social need exists for creative individuals in our world of commercialism. What place in our modern society with its emphasis on crass materialism would the great artists of the Renaissance have; the sculptors; the artists and the poets whose work today after centuries graces our galleries. It is difficult to conceive greats

such as Michelangelo, the Italian sculptor, the culminating genius of the Renaissance, or Rembrandt, the renowned Dutch painter, being produced in our world with its modern ideology.

Where would our best loved poets, Shakespeare, Bacon, or Milton fit into our society. Possibly we could financially utilize their great talents in the writing of soapbox commer-

A return to creativity, possibly another Renaissance must be, if we are to survive culturally.

DUST! DUST! - THE HOUSEWIFE'S SCOURGE

I dislike talking about trouble but since everyone an old discarded aquarium is that this new hobby will not be is worried to death about nuclear war and the threat of annihilation, I feel rather ashamed to confess that I'm upset by such a mundane thing as plain, ordinary dust. I object to it on the grounds that dust is one of the worst scourges that an ordinary housewife domestic squabbles, the price of meat, and the kids total lack of understanding the previous generation. terrariums grow best in an eas-retain moisture.

In books on the art of housekeeping, I read such things like if you keep your walk swept and wiped off the silt and grim from your window sills that you'll keep most of the dust out of the house. Well, I tried that . . . and it just doesn't work. The only thing that was improved was the appearance of the walk and window sills. The dust kept coming in, just the same. Exactly the same amount of dust appeared on the piano, the end tables, and under the chesterfield, and in the radiators. The same thing with the bedrooms. You can turn the mattress and air the blankets every day of your life, but exactly the same amount of dust meets your discouraged eyes. If you leave the dust for one day it is bad, but if you leave it for two days, you're in danger of blocking the nozzle of the vacuum cleaner.

Now I ask you with such a formidable enemy as that, why hasn't society tried to do something about that problem. Instead they seem to be helping Old Mother Nature add to this inevitable, sneaking nemesis that dogs the poor housewife at every turn. Not only the housewife, but industrial workers have big problems with dust. Thousands of workers are exposed to dust particles seeping into their lungs, blurring their eyes, stopping up their ears and blunting their senses in general. Air pollution is one of the most serious problems of industrial centres. Public Health officials are constantly alarmed about how these pollutions will affect the human body. Of course scientists are working on this problem but so far . . . like the problem of saving the world there seems to be no effective solution. It just looks as if all of us, housewife included, must learn to live with the dust nuisance, even while fighting its inroads. At least we can be philosophical about dust!

THE ROBBER BARON OF BIRDLAND ---THE STARLING

Only 20 years ago there were no starlings in Ontario and 40 years ago there were none in the United States. Apparently someone in New York thought it would be a good idea to see European Starlings in Central Park. It was a disastrous success and they have been such successful immigrants that they have become the most abundant species in all Ontario. We see them in towns and cities, about buildings and lawns. As we drive along roads we find them settled and feeding in flocks or sitting in rows along fences. Starlings have a habit of roosting in enormous numbers in shade trees and making the evenwashroom on each corridor, dis-sipates traffic and lessens the ing hideous by their chattering. Everywhere and at 120 birds imported to one city in 1870. The starling cheerful.
