Attending Conventions

The attendance of mayors, reeves and councillors and school trustees at conventions has been the subject of considerable discussion throughout the province this year. The departure of a delegation from York County on a fact finding trip to Europe has inspired more than usual interest in the question and it would be well if all municipal representatives would tell the taxpayers the whole story of convention expenses and benefits to the municipality.

There is some merit in conventions. Hard-headed business executives think it worthwhile to spend money to have staff members attend conventions and it is hardly likely they would continue doing it year after year if it did not pay dividends. It is quite conceivable that meetings of municipal officials and municipal representatives could be beneficial. It is also quite possible the practice has been carried to the extreme and that too many municipal officials and elected representatives are spending taxpayers' hard-earned money on jaunts and outings which bring little in real value to their municipalities. This at least is the opinion of a growing number of people throughout Ontario judging by reports in newspapers which reach our desk.

A Sudbury alderman recently charged that Ontario Municipal Association conventions are nothing but

a big party and a waste of taxpayers' money. He was opposing the addition of the mayor's name to a list of six councillors going to a convention at Niagara Falls. Councillors did not support his demand that one of the councillors stay home if the mayor went.

Members of local municipal councils can reassure questioning taxpayers by making a frank statement of convention expense so far this year. Taxpayers would welcome a statement from Richmond Hill and district municipal councils and from York County Council on the number of conventions attended this year by mayor, reeves, councillors and officials, and the amount of money expended. The statement might well be accompanied by an outline of the benefits which would be resulting to the taxpayers as a result of the convention visits.

Pending a statement of municipal expenditure for conventions it is reasonable to assume it has been steadily increasing in recent years. During the same years taxes have continued to increase so it can hardly be argued that great knowledge gained at conventions held from Halifax to Vancouver and now overseas have had a favorable influence on the tax rate. It may be that economy is not one of the items on the agenda of these con-

Efficient Local Government

The Glassco report has focussed attention on the inefficiency of the Federal Government. The mammoth operations of our senior government are being swamped in a sea of paper. The Glassco report has suggested that a complete overhaul of the machinery of government and the introduction of modern business methods would mean a saving of many millions to the Canadian taxpayer.

This newspaper suggests comparable savings could result from a streamlining of municipal government throughout this province. This is especially true in the suburban municipalities which have experienced such tremendous growth since the end of World War 2. Municipal governments have added many new departments and services that were unheard of a few years ago. Mushrooming subdivisions have meant a corresponding rapid expansion in the size but not necessarily the efficiency of local government.

Town government in Richmond Hill has grown to the point where it has become big business involving the expenditure of many thousands of dollars in public funds each year. The major share of this growth took place in a relatively short time in the fifties. The town now employs a staff of over 60 and has eight separate departments.

Governments can save the public money in other ways besides cutting taxes. A reduction in government spending and a streamlining of departmental operations can result in real savings to the taxpayers.

The Glassco report has shown that our Federal Government is faltering under massive incompetence. Before similar charges can be levelled against the municipalities they should begin to study the efficiency of their operations. The fat that accumulated during the lush years of the fifties should be ruthlessly cut away. Municipal councillors should make an agonizing reappraisal of their operations, department by department. Councils have been adept at adding more and more departments and high priced department heads. Very few councils have been able to find a way to save on the cost of government. In addition to the basic services during the past decade many councils have added industrial commissioners, planning directors, engineers and massive office staffs.

During the trying days this nation is passing through every effort must be made to alter the basic management of government.

Regional Planning

We heartily approve a recent announcement by Hon. Fred M. Cass, Minister of Municipal Affairs, that the province is to be divided into planning regions. Establishment of regional provincial offices could "provide municipalities with the assistance they need more swiftly," according to Lorne Cumming, deputy-minister. We hope it will also give them the opportunity to plan for the good of the whole region.

We also hope that the plan may light the way for a fundamental reorganization of local government in the province — government whose framework was set up 113 years ago and has long been creaking. Regional provincial offices could promote co-operative effort and legislation on the part of municipalities. The offices could also act as co-ordinators of economic planning and development directly with local councils.

The need for effective planning on a regional basis is evident in this area where thousands of acres of the best agricultural land has been lost to production to provide space for mushrooming subdivision growth. Other large tracts have been bought up by land speculators and are lying fallow awaiting development. Agriculture is still of major importance to the economy of this nation. Indiscriminate use of good agricultural

land for suburban development may be bitterly regretted in years to come. There is no clearer proof of the

need for effective planning on a regional basis than in the Niagara fruit belt, which is relentlessly being eaten up by industry and housing. This land is ideally suited for the growing of fruit, because of climatic and soil conditions. It cannot be replaced easily, if at all.

Another instance is the way the Lake Ontario shoreline from Oshawa to St. Catherines has been virtually sealed off from public use and preempted by factories, private estates and developers.

Many municipal problems flow far beyond one municipality's boundaries, yet cities, towns or townships are severely hampered in trying to cope with them because of these boundaries. No one community can - or will - by itself save the Niagara fruit lands. No single one has responsibility for ensuring that the lakefront is preserved and appropriately developed. Even in the matter of pollution, how can one city's bylaw be effective if the neighboring

municipality does not have one? Yes, regional planning is most urgently needed, and we sincerely hope that the new plan will do much to arrest and prevent the ravages of uncontrolled development.

A HOBBY TODAY SEEMS TO BE A NECESSITY

It wasn't so very long ago when the majority of men and women had no time left in their working day for the pursuits of hobbies as we know it. Moreover they would have been too exhausted at the end of a day's work to indulge in a hobby. In the time of our grandfathers and grandmothers nearly all the creative work was performed daily in the home and this was necessary because it could be done no other way. Their need for self-expression was satisfied although they may not have been aware of it.

In this day and age the scene has changed for most of us . . . mechanized industry, good transporta- this is so then this column ed about the controversy which not attract development unless tion, the mediums of radio and television, and the should already have at least is going on in Vaughan Town- the basic essential services are huge chain stores that are strung across the country half a dozen readers to start ship regarding the development there.
