90% of all oil company product research in Canada is done by Imperial

The fuels your car will use in the future are being designed today. In Imperial's ultra-modern research laboratories at Sarnia, scientists and technicians are working to ensure that gasolines for today's cars—and tomorrow's—are tailored for top performance. In the last ten years alone, Imperial has spent more than \$50 million to build the equipment needed to bring you top gasoline quality.

At Imperial Oil's laboratories at Sarnia, Ontario, more than 200 scientists and technicians are working to improve present petroleum products—and to develop new ones. Their research covers many fields, from gasolines to household detergents. Another 130 scientists and technicians are working at Imperial's Calgary laboratories on ways to find and produce more Canadian crude oil and natural gas. Imperial does more research than all other oil companies in Canada combined.
