Save Our Farms

A veteran grass roots Ontario agriculture expert sounded a note the other day which sure should be closely heeded from one extremity of our land to the other. And nowhere more than here in York Region is there more evidence of the destructive trend against which he sounds a warning.

Here we are in the midst of what has long been one of Canada's richest farm food producing areas. Yet how few and far apart are the real farms now, especially in this southern part of the regional municipality.

Our province is losing its best agricultural land at the rate of 40 acres an hour, says Ministry of Agriculture Middlesex County Representative Sandy Forsyth. He is particularly aware of what is going on after 16 former years at his job at one of the fastest growing Ontario urban districts, Waterloo County. He has since spent eight years in the area around London where urban expansion is more muted, but no less apparent.

Former King Township Reeve Gordon Cook, when in office and at a recent meeting, sounded the same kind of warning after township officials plotted on a map the frequency of land sales as speculation swept that York Region municipality. By then the waves of speculative buying generated from the Metro urban centre to the south of us had swept up almost all the farms in Markham, Richmond Hill and Vaughan.

Agricultural Representative Forsyth told last month's Waterloo Soil and Crop Improvement Association meeting that planners are now beginning to realize the preservation of good farm land must take precedence over everything else. He said only about 10,000,-000 acres or about 10 percent of our province's land can be consid-

ered good for agriculture and most of it is concentrated in southern areas like here where urban sprawl is exploding.

Forsyth said Waterloo County lost about 15,000 improved farm acres between 1966 and 1971, dropping from 225,000 to 210,000. There was a further 3,000 acres not in crops in 1971. Middlesex lost 67,000 improved acres in the same period, dropping from 550,-000 to 468,000, even though the actual number of acres in crops went up from 365,000 to 399,000.

The number of Waterloo commercial farms with annual sales of over \$5,000 dropped from 1,520 to 1,448 and in Middlesex from 2,673 to 2,588 during the same period. The loss figures certainly must be much worse here in York Region, the municipal remainder of old York County's prosperous farm country.

We agree with Forsyth that concern about this serious loss of farm land to residential-industrial development and highways should be impressed upon the public and government. As this thoughtful agriculture expert says, the farm land waste is likely to hit us in the not too far distant future just like the energy crisis is hitting

Forsyth feels we can't rely on imports from other countries and provinces to fill the food gap if we don't produce enough food for ourselves. We are finding out, as in the case of energy, that we can't depend on our neighbors or other countries.

In all this there is certainly plenty of food for thought about the terrible pace at which food producing farm land is being wasted. Time is fast passing by and government must act quickly if agricultural areas like our York Region are to be saved and urban pressures are to be transferred elsewhere.

Fledgling Racing Car Driver

Lives In Richmond Hill

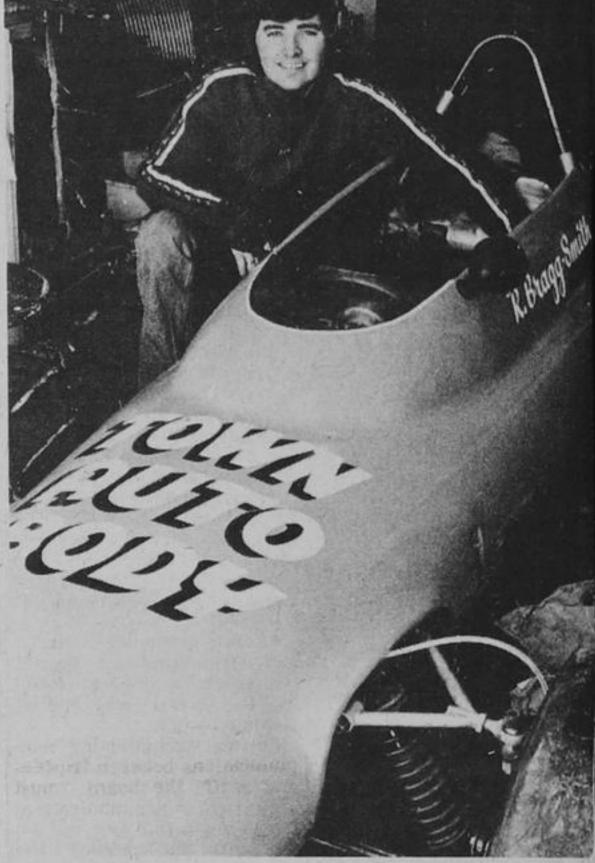

is quite a difficult proposition. To begin with,

the constant upkeep of a good car demands a

great deal of time. That in itself, however, is

Making a career out of racing car driving

In the Spotlight 9

RUPERT BRAGG-SMITH WITH HIS RACER

Rupert drives a \$6,800 Formula Ford, which is a scaled down Grand Prix car, powered by a Ford engine. Although the car can travel at over 140 miles per hour on the straights, the amount of danger involved, according to Rupert, is far less than imagined by the general public. "In a way it's safer than being on the road - you know that your fellow driver has had to pass certain safety regulations to get on the track."

A grade "A" mechanic who first became interested in sports cars through fixing up his brother's Austin Heeley, Rupert attended Gary Magwit's racing car school in Scarboro last summer. He graduated with the best lap time and lap consistency from a class of twelve. One of the most important things he learned there was how to take a corner. There are ten on the two and a half mile circuit at Mosport.

Contrary to the situations depicted in the movies, there is very little competitive animosity between drivers on the track. They all want to win, of course, but, "if anything you feel close

Gordon Sinclair's Views About Our Canada Today

I'm departing for the usual news formula, ere, to speak an editorial.

This is by a Toronto-born Canadian. It is not a warning because the time for warning is late. It is an appraisement of how the people who want to take over Canada have done it with a bloodless revolution.

The ever-increasing hatred of, and pressure against, business, the idea that the state tells us where to work — and where to live, and eat — rushes forward. It gets closer every minute. Business is to be hated.

Here in Canada the legally elected government bows to a gloating minority of Socialists who discover that, as the third most popular party, they can, and do, cause the majority party to dance to their tune.

GOVERNMENT EMPLOYED Our universities are filled with teachers who have never worked for any organization except government. They went from kindergarten (state supported) to grade school, to high school, to univer-

sity as staff. Always from birth to death, feeding out of the public trough and hurling insults at business which puts into the public trough.

Countless Canadians of this hour have been persuaded by those people that Bell Telephone, as a sample, should be nationalized. That would mean that the hundreds of millions of dollars now paid by Bell in taxes would cease. It would not mean one extra job — not one!

All dividends would cease. Hence income tax would drop. But it doesn't matter to these haters of business.

Bell's rates are all controlled and are comparable to any government-owned phone companies. But this is not enough. We must take it all over. They'll do this too. They'll take over Eaton's and Simpsons and Hudson Bay.

They'll take over Zellers. Remember what I'm telling you.

Woolworths and Kresge, seeing it coming, will get out of Canada. Then you'll fill out a form, line up and pay spot cash for what you buy as you now do at most liquor stores. Everything will be

controlled, no credit, no citizens above any other citizen. Cuba and China are the test patterns. You can see now what's coming to Canada.

CONTEMPTUOUS

Business is to be hated, free enterprise is contemptuous. It is being taught at each and all and every university in Ontario this day.

Fill out the form, live where you're told, do what you're told, eat what you are told to eat. It is people-power. To be rich is automatically to be corrupt and contemptible.

As a great treat, you may one day when your number comes up, attend a movie, like in Cuba.

You might even, but less often, dine out. The menu will be controlled portions of food, the waiter controlled, no tips.

It is here now. The Government of Canada has, through fear, become a sham government.

Prime Minister — in actuality — David Lewis has made it so!! am disgusted with Pierre Elliott Trudeau.

—Gordon Sinclair on CFRB

County Board May Change School Lunch Policy

school from points beyond the

limit set by board policy. These children and a few others take their lunch to school, Hincks reports. The school is an educational institution, not a social agency, he said, but exceptions are made for some, usually where there is an emergency situation in the family.

The teachers take their turn at supervising the lunch room, and do not consider this an imposition. The lunch "hour" in elementary schools is from 12 to 1:30 pm, and the children have usually finished eating by 12:30. They then go out to play, or if the weather is bad arrangements are made for indoor activities.

MAKE GOOD USE OF TIME At Oak Ridges School, where most of the children arrive by bus, Principal Ed Burlew and his staff make use of the time for extra-curricular activities which, in urban schools, would normally take place after 3:30

Principal Nathan Davidson of MacKillop School in Richmond Hill has one bus load of children who take their lunches to school. He also has a few who live within walking distance. Board policy is flexible, says

Davidson, allowing for cases of "undue hardship" and each case is different. If both parents are working they are expected to make their own arrangements for their children's welfare during the lunch period, he said, but the school's prime consideration is the welfare of the child. The lunch room is open from 12:40 to 1:15 pm, and the

school's vice-principal and a teacher share the responsibility of supervision. To compensate, these two are not required to take their turn at "yard duty". The school has had "surpris-

ingly few" requests for lunch privileges, Davidson reports, SPECIAL ED CLASSES

Walter Scott School, also in Richmond Hill, is in an area of fairly high density and has no children arriving by bus. There are, however, 18 students in either full-time or part-time special education programs. They come from all around the area and are transported by

Aside from this small group, says Principal William Kinsley, there are few requests for lunch privileges, and these are usually cases of dire emergency.

As at McKillop, the two teachers who supervise the lunchroom are relieved of yard duty. There is no pressure, said Kinsley. The teachers prefer indoor supervision to outdoor supervision of the schoolgrounds.

PARENTS NOT HOME

There are many families in the area where parents are not at home at noon, Kinsley said, but when contact is made with the parents, it is usually found that arrangements have been made for a neighbor to provide lunch, or for a high school student to be in the home when the elementary school child goes home for lunch. If there are children who go home to empty houses or apartments it has not been brought to the attention of the principals interviewed.

Jefferson School, where Kins-

ley served as principal for three years before moving to Walter Scott in September, follows the same procedures as Oak Ridges, Since almost all of its students arrive by bus, the lunch break is the time set for special pro-

jects and programs. The schools with the problems, says Kinsley, are those that have half the student body staying for lunch and the other half going home. In such cases it is very difficult to plan extra curricular activities that can involve the whole student body.

HALF AND HALF Thornhill School falls into this category, with from 50 to 60 percent of the pupils staying for lunch. Six buses come and go each school day-two of them bringing in 27 children for special education classes, the others transporting children who live beyond the limits set by board

policy. Last year, says Principal Ed Wells, for about four months, parents helped supervise the lunches, but the parents did not like the arrangement and now teachers take turns staying in the classrooms set aside as lunch rooms. Parents, however, still come into the school to listen to children read and help in other ways under supervision of the teachers.

All of the special education students, who come from all parts of the board's area 3, stay for lunch, and there are a few who could walk home to lunch, but there is no one at home to supervise them, so Wells makes some exceptions in these cases, allowing the children to take their lunch to school.
