

Natural Gas heats cheaper than oil. That's why 8 out of 10 new homes in the York Region area use it.

That's right—at present price levels, Natural Gas provides equal heat to fuel oil at a saving of over 12 per cent.* That represents over \$70.00 if you use 1000 gallons of oil per year. Not bad. No wonder Natural Gas is the first choice heating fuel in 8 out of 10 new homes in the York Region area.

Most oil furnaces can be converted by installing a Power Gas Burner on a rental basis for as little as \$3.75 per month.

Special Offer! No rental charge for a full year.

As a special incentive to new heating customers, we are prepared to install a Natural Gas Burner on any suitable oil furnace with no rental charge for the first year. That's right—no rental for the first 12 months from date of installation, plus service or any maintenance required on rental equipment. Furthermore, we will install up to 100 feet of service line from the gas main into your home at no charge.

If you are not completely satisfied after a one-year trial period, we will remove the Gas Burner at our expense. How's that for confidence?

If you require a completely new compact gas furnace, you can spread the payments over 10 years—with no down payment and no payments to make until April 1979.

Either way you save money. That's one promise you can bank on.
