### FLOWER OF THE MONTH

#### HINTS ON ROSE GROWING

**Location:** The ideal location for a rose garden is where there is a gentle slope to the South or West. The site should be sunny and protected from strong winds. Areas close to trees or hedges should be avoided so that roots do not encroach on the rose beds and rob the soil of its moisture. Light shade may prevent the blooms from fading rapidly. Beds wide enough to contain two or three rows of bushes, planted alternately, are generally most convenient.

**Soil:** Roses thrive best in fairly rich clay loam, but it must be well drained. Remember that the planting is of a more or less permanent nature. The soil should be dug deeply because roses have long deep roots.

For horticultural convenience, roses have been divided into a number of classes such as Hybrid Tea (H.T.), Hybrid Perpetual (P.T.), Floribunda, Grandiflora and Climbers.

The Hybrid Tea is the most popular of all the rose types grown in gardens large or small. It provides bloom throughout the season, and depending on the variety, lends itself to both cut flowers and garden decoration.

Roses of the Hybrid Tea type require pruning each spring before the bushes leaf out. This is most important, and should be done very carefully. For winter protection, such material as straw, strawy manure or leaves are adequate.

Always buy from reliable nurseries; they will guarantee their products.

Mrs. Bertha Smith

People everywhere in life from every walk and station,  
From every town and city and every state and nation  
Have given me so many things intangible and dear,  
I couldn't begin to count them all or even make them clear...  
I only know I owe so much to people everywhere  
And when I put my thoughts in verse it's just a way to share  
The musings of a thankful heart, a heart much like your own,  
For nothing that I think or write is mine and mine alone...  
So if you found some beauty in any word or line,  
It's just "Your Soul's Reflection" in "Proximity with Mine".  
-Helen Steiner Rice
