

*Druella Acantha Malvina cont'd*

Scientists have found a switch in the body that turns off hormones and proteins that trigger diseases like cancer, heart disease, diabetes, multiple sclerosis. It sends the cease-fire order once the body has vanquished a foe such as a virus. One scientist put it this way. The attack system is a good thing when the body is invaded by disease but you need a way to call off the troops once the enemy has been defeated. Otherwise the immune system goes after healthy cells and results in one of the aforementioned diseases.

- Reader's Digest

A local couple went out to celebrate their 50th Wedding Anniversary. On the way home she was quite touched to see a tear in his eye and asked if he was getting sentimental because they were celebrating 50 wonderful years together.

He replied, "No, I was thinking about the time before we got married. Your father threatened me with a shotgun and said he'd have me thrown in jail for 50 years if I didn't marry you. Tomorrow I would've been a free man!"

There are no real difficulties in a home where the children hope to be like their parents one day.
