- 22 Grab a bunch of chicks (6)
- 24 Magnificent drawing surrounds rapid treatment unit (9)

Computer Tips - Continued from page 9

and the drive will be limited to strict data storage. The choice is yours, but CDs still seem like the best alternative at this time.

Using your back up program and your removable media, you should be able to set up a routine for backing up your data. If your data is really crucial, back up everyday. Otherwise, once a week is fine. If you are a regular home user, once a month or every few months should be suitable. Think of it this way, if your data was lost, how far into the past is acceptable for you to lose? In other words, is the data you entered today crucial tomorrow? If so, back up every day.

Some companies will do all of this for you. We offer a complete maintenance and back up program for individuals and small businesses. If you have any questions, regarding backing up or any other computer issue, feel free to call us for details. And remember, backed up data is your security blanket. When working with data it is much smarter to be proactive rather than reactive. See you next month when we will talk about free things on the web and whether they are free or not. Until then, happy computing.
