Shareholders of Value and Possibilities of the Property

Gold Mines, Limited, have sent out details of the recent find at the property. They state that as a result of recent development work there has been encountered in a cross-cut on the four hundred foot level at a distance of two hundred and twentybody of quartz and mineralized schist eighteen feet in width. Assays across the entire eighteen feet of vein matter give an average value of thirty dollars per ton.

This cross-cut not only proves up Walter Taberner, the diamond hun- the result of the diamond drilling in ter, who with a party left last regard to this particular vein, but also is a practical assurance that

In this connection it is interesting to note that values were encountered at a depth of twelve hundred and eighteen feet by the diamond drill, which will undoubtedly prove a valuable to the mine as those en countered on the four hundred foot level. Plans are now prepared and work will be started at once on the erection on the property of a twenty stamp mill.

In view of present market conditions the management it due to the shareholders to give them this information in order that they deal with their stock with a full know ledge of the present value and future possibilities of the property.

CAPITALIZATION TO BE REDUCED

Pearl Lake Gold Mines Advise Dome Lake Development Work Continues Satisfactory---Mill Ready by first of Year

The Toronto World says that arrangements are pending for the re-The directors of the Pearl Lake organization of the Dome Lake Mina notice to the shareholders giving ing Co., Ltd., which holds three claims in the Porcupine camp in the Dome section. It is understood that the plan, which is to be submitted to the directors in the very near future, will call for the reduction of the capitalization from \$2,500,000 to four feet from the main shaft an ore \$500,000. Of the new capitalization of 500,000 shares, 100,000 shares will be left in the treasury for development purposes, and the balance, less a small amount to liquidate indebtedness, be divided pro rata among the shareholders. There should be about 375,000 shares available for this purpose.

Dome Lake was offered to the publie last year at 40 cents a share, but only 15,000 shares were taken up at that time. The offering was made by Merrill A. Teague, an American promoter, who attempted to introduce New York methods in disposing of the shares. The shareholders were given a chance to secure stock last spring at five cents a share in order to provide development funds.

A stamp mill is now being installed at the property, and will be ready to commence operations about the first of the year. Development work has proved highly satisfactory of late. Frank E. Plummer of Toronto is president of the company. The stock has recently gone up considerably in the market as a result of the formation of re-organization
