**20,000 MORE HORSE POWER PROMISED NOW FOR CAMP**

Northern Canada Power to Build at Once from Des Quinze to Porcupine.

Last week the Northern Canada Power Co., through the bid put in on its behalf by Mr. Alex Fasken, of Toronto, won the Des Quinze power rights auctioned off by the Quebec Government. It is understood that it is planned to start at once on development of 20,000 horsepower. A transmission line will be built as straight as possible to Porcupine, which is 120 miles as a crow flies from the Quinze Rapids of the Upper Ottawa. Energy from the new development will be flowing into Porcupine by the late Summer or Fall of 1924, and Porcupine power worries will then be over. Twenty thousand horsepower will mine and mill about 9,000 tons of ore daily and facilitate an increase of approximately \$25,000,000 to Ontario's gold production.

It is hoped by the power interests that the developments now almost completed closer at hand will care for present increases planned by Porcupine mine operators and assure no repetition of this winter's power shortage next Winter. The Quinze power will be ready for Summer of next year to give further assurance of safety and to permit the gold mines to work up to an aggregate production of \$50,000,000 yearly or better, which seems the destined mark of 1925. The Quinze-Porcupine line will be fire-proof as steel towers will be built. Offshooting lines may be run into the Kirkland and Porcupine goldfields. The news that Quinze power is to be made available for Ontario goldfields is the biggest in a long time.

**DANCE ON MONDAY, MAY 14, IN AID OF NEW ORGAN**

A special dance is announced for the Masonic Hall, Timmins, on Monday evening, May 14th. The event is in aid of the New organ for the Anglican church. Schroeder's Orchestra will furnish the best of music for the occasion, and a very enjoyable evening is assured to all attending. Dancing at 9 p.m.

**HEARTS OF OAK**

London Daily Express: It has fallen to Italy not only to produce the finest of all the war memorials in the sublime Cross of Victory that overlooks the battlefield of the Carso, but, now, to devise the most perfect symbolism for a nation's cenotaph. Five hundred thousand trees are to be planted throughout Italy, and each is to have a tablet bearing the name of a soldier killed in the war. Trees throughout history have been the natural emblems of strength and courage, and it was a tree—the laurel—that twenty-five hundred years ago gave the wreath that crowned the victor in the Greek Olympic games.

As an indirect result of the epidemic of typhoid fever at Cochrane, North Bay has been ordered by the Provincial Board of Health to install a chlorinating plant for its water supply. A number of other municipalities, equally far removed from the epidemic, are understood to have received similar orders. Timmins can thank the Medical Health Officer, Dr. Moore, that neither such an order nor such an epidemic need be feared here. Some years ago Dr. Moore's foresight and interest resulted in a chlorinating plant being installed here. It may not add to the flavour, but it does add to the safety. In health matters, as in fire protection, Timmins has "luck," but that "luck" is founded on something other than chance.

Plans are under way for the building of a Masonic Temple in Haileybury on the site of the former Methodist Church. It is likely that the Oddfellows will combine with the Masons in the erection of the building and have it large enough for two lodge rooms and the two lodges. A building 40 x 90 is planned and it is hoped to complete the structure this summer.

The Gamble-Robinson wholesale firm in Timmins is now incorporated under the name, Gamble-Robinson, Timmins, Limited.

The annual banquet of the Timmins Citizen's Band will be held in the Queen's Hotel to-morrow (Thursday) evening, commencing at 9.30.

Sudbury claims to have nearly a hundred radio sets in operation at the present time.

Cobalt has made a grant of \$1000 to Cochrane to assist the northern town in fighting the fever epidemic.

No one yet has supplied a satisfactory explanation as to how the sap of a tree rises.

**FORESTRY vs. FARMING**

Canada spends about \$800,000 a year on agricultural research and not more than \$35,000 is devoted to forest research. The forests of Canada occupy about 50% of the inhabitable area and practically the whole population in that 50% of our country will have to be attracted by forest industries.

Lots of fellows who always are in a hurry are going in the wrong direction.

**ABITIBI MILL MAKES RECORD OF OVER 500 TONS**

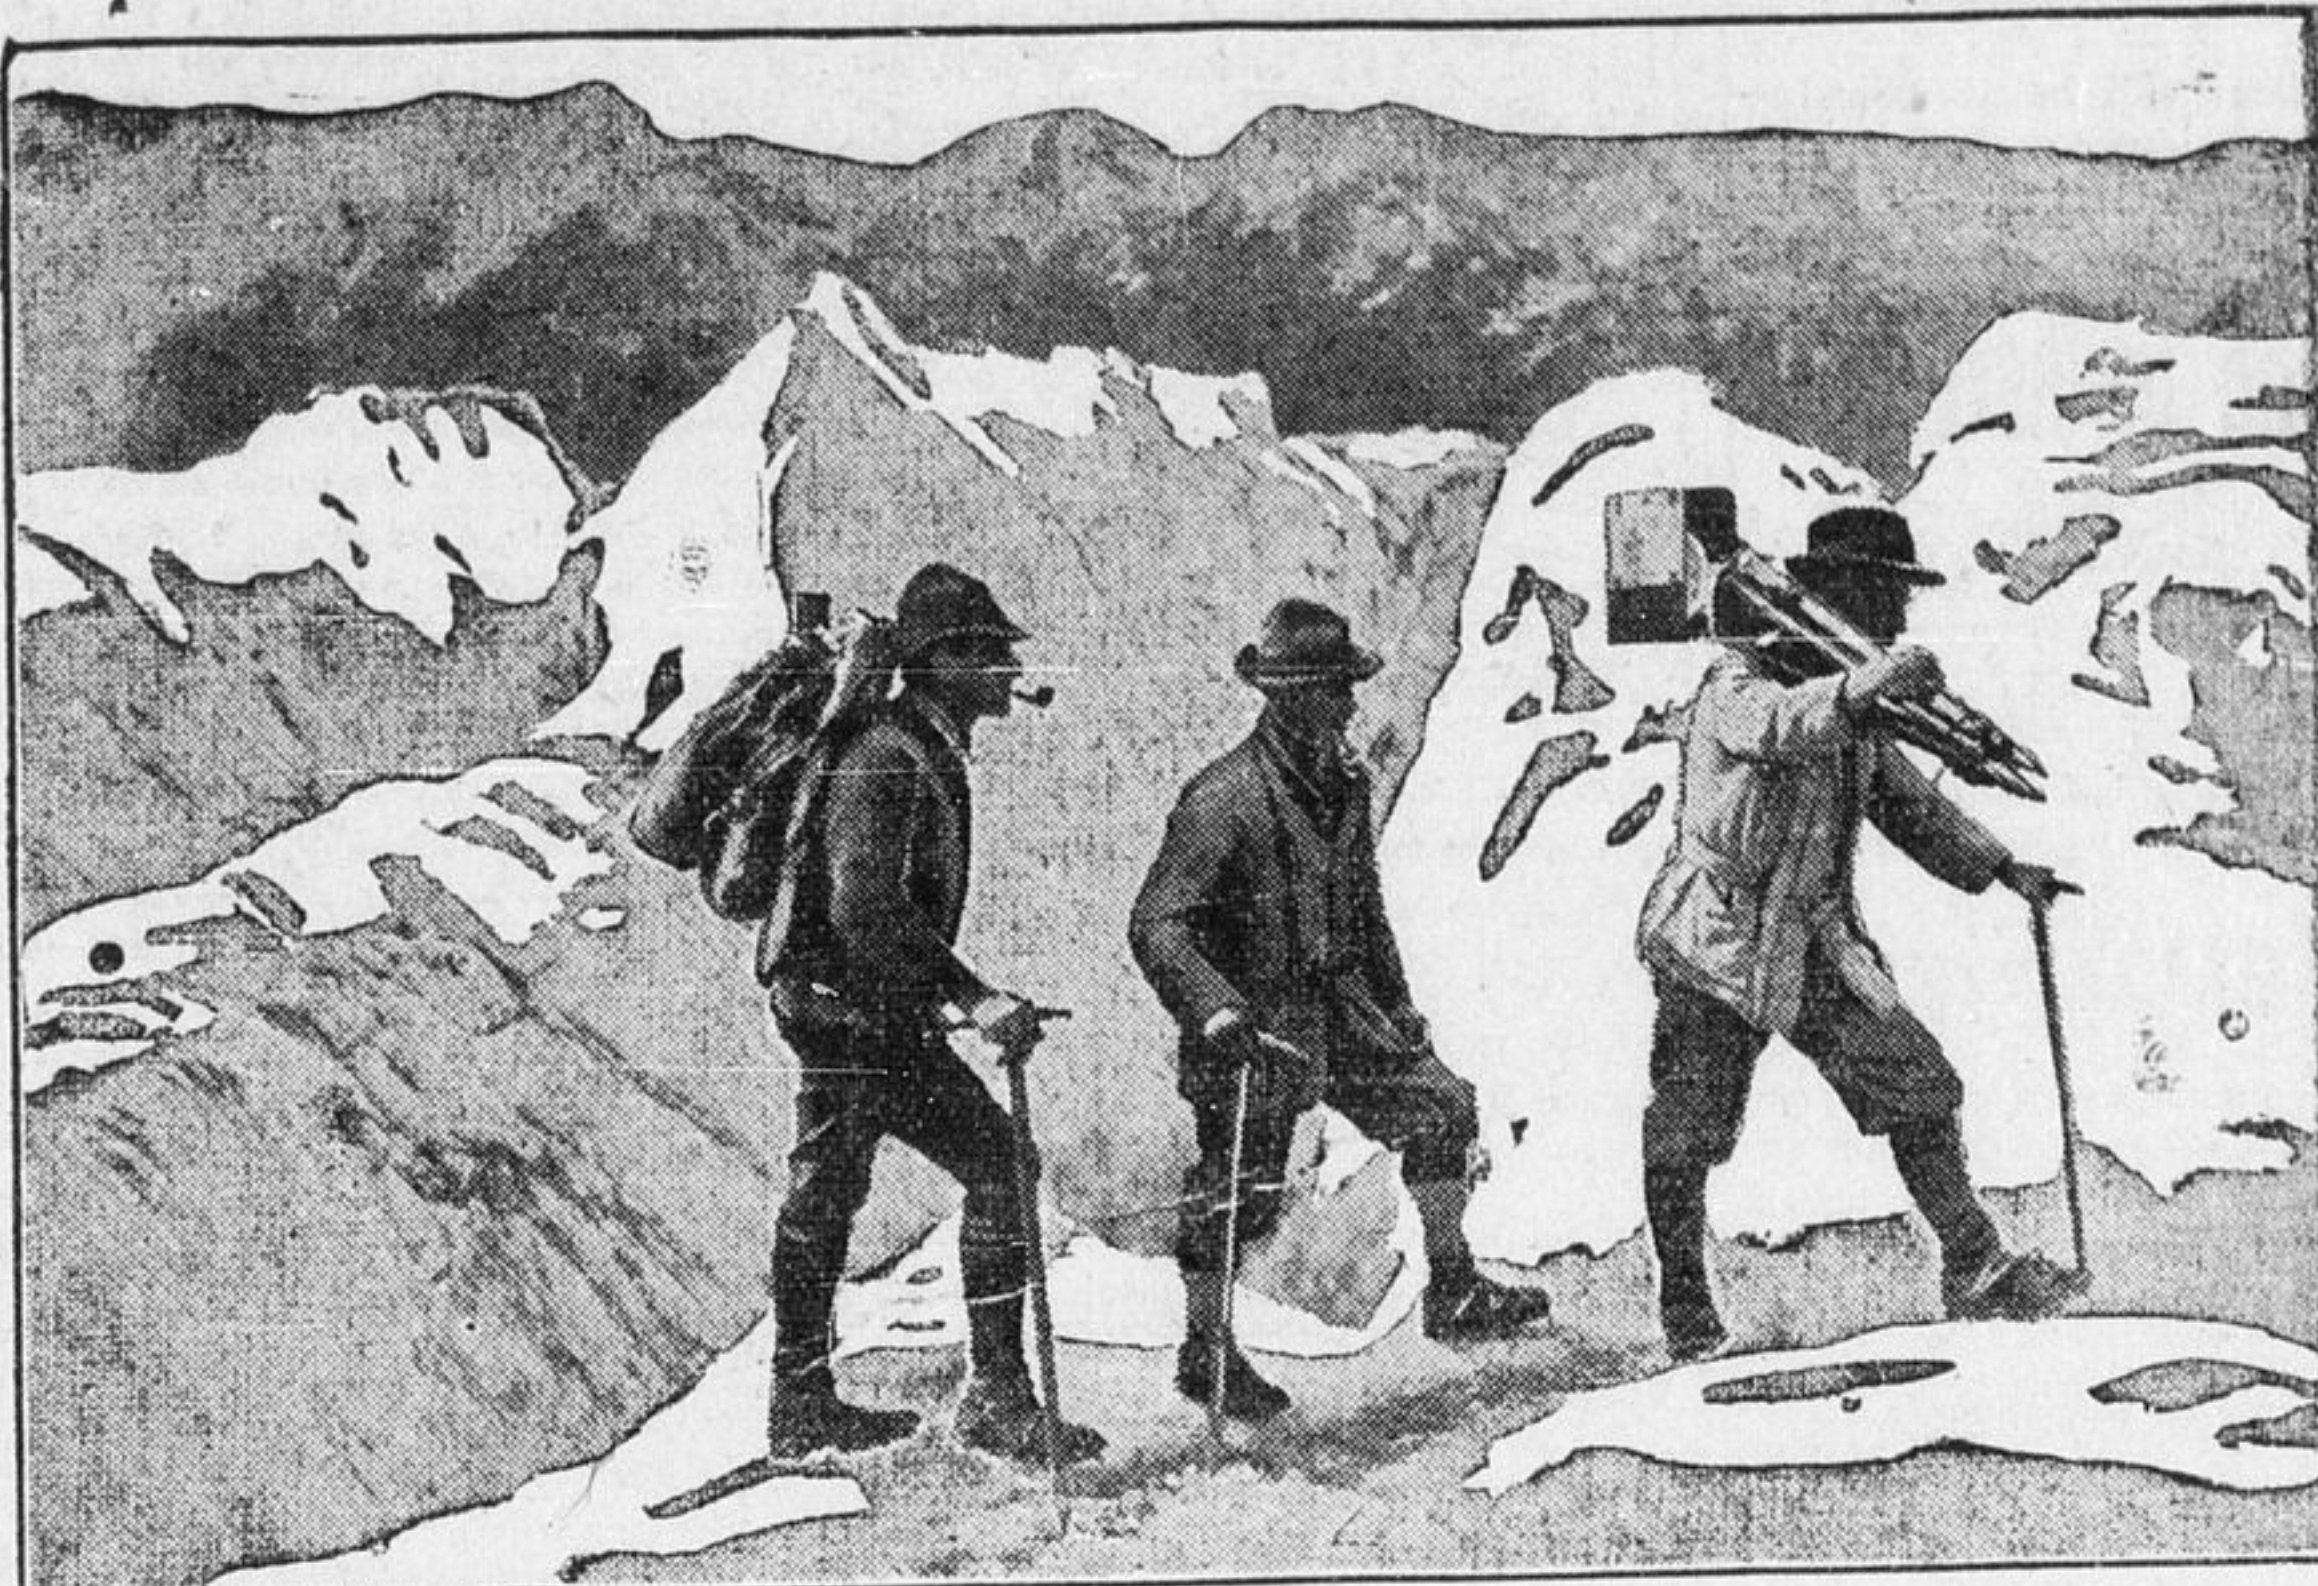

The paper mill at Iroquois Falls made the new high record of 500.57 tons on Thursday last. The record was made despite the fact that two of the machines ran into difficulties that necessitated long shut-downs on both of them.

Don't say it can't be done! There are no problems too big to solve, but there are a lot of people too small to solve them.

**ONE WAY TO MEASURE A TREE**

In parts of South America the natives use a curious method of measuring the height of a tower or tree. They turn their backs to the tree and walk away from it until they reach a spot where by stooping down and looking between their legs the top of the tree becomes just visible. Then they make a mark on the ground and the distance to the foot of the tree is the same as the height.

**Taking the Roof of Canada.**

The glacial Rockies as a movie location.

"AND just then," said Otto Paul Schwarz, of Switzerland, in describing a trip in the Canadian Pacific Rockies, "we saw a huge Bergschrund."

"And did it bark at you?" he was asked. "Or do they bleat?"

"Ach, no. A bergschrund is not a bird. It is a huge crevasse where the ice has slipped down the rock wall and cracked. The next stumbling block we came to was a chimney. This is a hard business. It means bracing your back against one wall and your feet against the other and doing what you call on this side 'the shimmy' till you get to the top. Icicles fifteen feet long hung above us."

It is a great life, this one of mountain climbing, especially higher up where the glaciers are. Imagine a river of ice with a depth of something like 1,000 feet. Great crevasses reach down, it seems,

to the bowels of the earth, peaks and minarets rise from its uneven surface and glisten in the sun which can never warm them; a giant green-white force, irresistible, stupendous, with an alluring fascination which the lovers of the outdoors cannot deny.

The picture above was taken on the "roof of Canada" near Banff, and the huge glacier which the party is traversing will, in years, perhaps, help to make fertile the prairie plains. Travelling at the rate of about four inches each day, nothing can withhold it, but another generation of sightseers will have come and gone before the ice on which the climbers stand will have found its way down to the warmer valleys where it will melt; and in the meantime, snow from the even higher peaks will press and pack and so, so far as the present day world is concerned, the life of this wonderful natural force is without end.
