QUINZE POWER READY BY FIRST OF SEPTEMBER

Reports Given at Annual Meeting of Canada Power, Ltd., Last Week.

The annual statement of the Northern Canada Power, Limited, for the year ending Dec. 31st, 1923, was presented at the annual meeting held in Toronto last week. Reports of the meeting in Toronto newspapers say that the company shows net earnings available for bond interest of \$591,787.68, against bond interest for the year amounting to \$89,065.05. These earnings are considered very satisfactory, in view of the fact that the Lower Sturgeon Falls plant of 9,000 h.p. did not come into operation until September, and that the company experienced in February, March and April of last year the greatest scarcity of water in its history.

The new development on the Quinze River is expected to come into operation by the 1st of September at the latest; the company's reservoirs, which have been extensively added to, are full, owing to the heavy rainfall in the latter part of last year, consequently there will be no shortage of water and from now on the company is assured of being able to take care of all demands for power.

The net earnings for January, 1924, amounted to \$94,168. The gross earnings for February are very satisfactory, and it is expected that the net will show about the same as January. This monthly rate of net earnings has been maintained practically since September last when the Lower Sturgeon Falls development came into operation. The company's net earnings are now on a basis of over \$750,000 per annum available for annual bond interest of \$292,500, and this is without any earnings from the Quinze development, which will deliver an additional 20,000 h.p. Upon the completion of this plant the capacity of the company will be as follows:

	Horsepower
Wawatit Falls	15,000
Sandy Falls	9,000
Lower Sturgeon Falls	9,000
Quinze River	20,000
Total	49,000

The Quinze development is capable of developing 60,000 h.p., and the additional 40,000 h.p. can be installed at a low cost owing to the fact that a great amount of the dead work necessary for the total installation is being done at the present time.

EX-POSTMASTER, KIRKLAND LAKE, GIVEN FIVE YEARS

Thos. P. Carr, former postmaster at Kirkland Lake, was sentenced last week by Magistrate Atkinson to five years in Kingston when he pleaded guilty to a charge of misappropriating post office funds. The amount involved was over \$7,000.00. This amount is said to have been taken in the course of a few months. The counsel for the defence, Messrs. H. L. Slaght and W. A. Gordon, made eloquent pleas for leniency, referring to the excellent character of the prisoner previously and his fine reputation for honesty and good citizenship. Prominent citizens of the district also testified to the previous good character of the accused man. Gambling is understood to have been the cause of the trouble, money being taken to cover losses until there was no chance for adjustment, the amounts involved reaching too large proportions. Crown Attorney Smiley agreed with much that the defence emphasized, but pointed out that the offence was a very serious one and the public had to be protected. He also mentioned the fact that no restitution had been made.

Before being taken to Kingston, Carr is being held at North Bay as an important witness in some gambling charges that have been laid against some Kirkland Lake men. It is said that the charge of using marked cards will figure in this case.

MR. J. H. BLACK VICE-PRES. NORTHERN CANADA POWER

Some Toronto newspapers recently gave currency to a rumour that Mr. J. H. Black was severing his connection with the Northern Canada Power, Limited. Mr. Black has been connected with the Northern Canada Power since its inception, and there is a general belief that his talent and ability have been largely responsible for the progress of this pioneer power company of this part of the North. As no reason was given for the suggested withdrawal of Mr. Black, the report was given little notice in the North Land. Last week the strongest sort of a contradiction of the rumour was given when at the annual meeting of the company Mr. Black was elected Vice-President of the Northern Canada Power, Limited.

ENLARGED LAKE SHORE MILL READY EARLY IN MAY

According to an interview given last week by Mr. R. C. Coffey, manager of the Lake Shore Mine, at Kirkland Lake, the new and enlarged mill equipment will be in general operation early in May. The new crusher was placed in operation some days ago for a trial run, while the tube and ball mills are all in position and will be tuned up at an early date. Asked as to the probable capacity of the enlarged mill, Mr. Coffey remarked that the plant would treat 300 tons of ore daily. As to this, however, it is obvious that the official announcement is extremely conservative. For instance, the two new 7x6 ball mills are capable of handling at least 175 tons each per day. In addition to these is the small 70-ton unit already in operation. A visit to the plant shows the ball mills to be about the smallest link in the process through which the ore is crushed and treated, and this makes it reasonable to believe that while a capacity of 300 tons daily is the aim of the management, yet there are good indications of this being exceeded by an additional 50 or 100 tons daily in due time. The mill building on the Lake Shore has been enlarged sufficiently to accommodate one more ball and tube mill at such time as such an enlargement may be required. This will enable the management to increase the capacity to around 500 tons daily without any additional building other than for the accommodation of tanks. With the completion of construction work around the end of the coming month, the Lake Shore mill will be the fourth largest in the precious metal mining fields of Northern Ontario, ranking next to Hollinger, Dome and McIntyre-Porcupine. It is particularly important that since commencing milling operations over six years ago, the Lake Shore has produced an average of over \$24 from each ton of ore treated. This is two and a half times richer than the average from the other leading gold mines of Northern

Ontario. When treating larger tonnage, it is planned to reduce the grade of the ore somewhat, but the average will still be maintained at a point which will show a much larger profit than is usually the case from a plant the size of that now on the Lake Shore.

Wonderful Guarantee!

Of Over a Million Bottles of Carnol Sold, Only Four Have Been Returned

If you will read the second to last paragraph of the circular which accompanies every bottle of Carnol, you will notice the following guarantee: "If, after taking your first bottle of Carnol, according to directions, you find that it has not helped you, that its action is not already recognizable, and you can say so sincerely, take back the empty (or partly empty) bottle, and get your money back. Remember we refund the druggist the purchase price—he loses nothing."

Do you think the manufacturers would make this guarantee if they did not know that Carnol possessed properties of unusual merit?

But, would it be fair to say that Carnol does not possess merit when, out of a million bottles sold, only four were returned?

If the other bottles sold had not proved beneficial, they also would have been returned.

These four bottles were returned and the money refunded without question, the only explanation being that Carnol had not given relief.

As disease is of slow growth it naturally takes time for any medicine to eradicate it.

To get the full benefit of Carnol it is clearly stated in the circular that you should take a "Course of Carnol," although many people have been greatly benefited after taking one or two bottles.

Perhaps the reason why these people didn't benefit by taking Carnol was because they did not take enough of it—besides it is not claimed for Carnol that it will do the impossible.

Carnol is sold by all good druggists everywhere.

The Mining Market

The recent re-action in the Mining Share Market appears to have ran its course and stocks are now in a position for an upward move.

Why Ford Predominates

Simplicity of Operation

The Ford is remarkably easy to operate. Gear shifting is done automatically by the feet. The driver's hands are always on the wheel. His eyes are always on the road. He can watch traffic constantly.

There is no possibility of failure to accomplish a gear shift. Ford gears being of the planetary type are always in mesh and every shift is positive and unailing.

The Ford is very easy to steer and responds to the slightest movement of the wheel. It will turn in a circle with a radius of nineteen feet three inches.

The short Ford wheelbase is a boon in congested traffic. It gives easy manipulation everywhere, and enables you to park in crowded sections where a big car is handicapped.
