**SPECTACULAR FINDS AT BARRY-HOLLINGER MINE**

If the Ore Uncovered Last Week Continues it will mean a Very Large Addition to Ore Reserves

Through the kindness of Mr. H. C. Crow, President of the Barry-Hollinger Gold Mines at Boston Creek, The Advance is able to give its readers the text of the latest report of the mine manager of that property, Mr. L. B. Smith, who under date of Sept. 28th, writes as follows:—

"Mr. McQuarrie, our Mine Captain, has just brought into this office an amount of the most spectacular specimens I have seen on the property.

"He tells me that this has opened in 307 Section 2, to the West. I saw this place Monday morning and ordered them to drill farther to the West. This has opened up in the last round.

"McQuarrie tells me it is exposed for the entire height of the stope face, which is 10 ft.

"This is heading for 305 drift and on which no development has been done to date. If it continues it will mean a very large addition to our reserves.

"Will examine this myself and write you fully, but from the specimens and the ore as brought up, it is certainly spectacular."

**AFRAID NOW OF POSSIBLE RESULTS OF HIS SCHEME**

In the "Whiskereno" contest inaugurated in connection with the famous K. of C. Charity Turkey Stag, to be held on December 17th, "Lap" Laprairie is now afraid of the consequences of this scheme. He nearly wept last week explaining how frightened he was that an accident might occur at the aforesaid stag party. "It is awful," Lap says, "to think of what might happen if some of the contestants' whiskers should get caught in the wheels of the kiddie cars in the kiddie car race, and have their chins pulled off."

**PROMISE OF UNTOLD WEALTH IN COCHRANE COAL AREA**

There is a general opinion that if there is really coal north Cochrane, it will be a wonderful thing not only for the North Land but for all Ontario and for Canada. Of course, this is true, but if the Russian scientist, Dr. Dvorkovitz has actually invented the process he claims, then coal fields anywhere mean wealth untold. Dr. Dvorkovitz says that from 500 tons of coal he can extract by a new method which he has invented, and which is being seriously considered in Great Britain, the following products:—

- 2,000 gallons of gasoline.
- 6,500 gallons of kerosene.
- 3,000 gallons of lubricating oil.
- 12,000 pounds of paraffin wax.
- 20,000 pounds of phenol.
- 45,000 pounds of pitch.
- 12,000 pounds of sulphate of ammonia.
- 12,000 pounds of sulphur.

And even after that, according to The New York World, he would have left 374 tons of smokeless fuel that would give greater heat than coal. Dr. Paul Dvorkovitz, the inventor of this process, is said to have interested British financiers and engineers in the project.

If there is anything in all this, it would look as if the Dominion and Provincial governments should cooperate to find out at once whether or not there is coal in this North Land, and if there is have it developed as soon as possible and then investigate the Russian scientist's scheme. If that plan could be worked it would mean a benefit to nearly every industry in the country and the creation of a series of new industries.

**FREE DENTAL CLINIC ON OCTOBER 20 AT TIMMINS**

Local Dentists Give Very Generous Co-operation in Repaid to Ontario Dental Health Day

Wednesday, Oct. 20th, is Dental Health Day throughout Ontario, the event being under the auspices of the Ontario Department of Health. The Department of Health has asked for the co-operation of the dentists in each locality, and in Timmins and Schumacher this co-operation has been fully volunteered. The local dentists are holding a free dental clinic in King's Hall, on Oct. 20th, and there expert advice and examination will be available without charge. As has been pointed out before, the importance of this service cannot be over-estimated. There are many people who find great difficulty in appropriating and applying knowledge given in a general way; they get scant benefit from the public lecture or the printed page. They need individual advice and instruction. The personal free service to be given by the profession will prove of great benefit to all such people. The dentists are making this contribution at the request of the Department, and they are carrying it through in Timmins with special effectiveness and thoroughness.

The Department is organizing other activities for Ontario Dental Health Day, Oct. 20th. These other features include the showing of special health films in the theatres, the broadcasting of mouth health messages from the various stations, dental health plays and newspaper publicity. Addresses on mouth hygiene will be delivered before service clubs and other organizations and mass meetings of school children will be held.

The purpose of the undertaking is to inform the general public in regard to the danger of allowing dental infection to remain in the mouth and to give instruction in connection with the prevention of dental diseases. That many systemic diseases are caused by infection at root ends and pyorrhea pockets cannot be denied, and it is just as true that many of these conditions can be prevented by sufficient care at the proper time. It has been well established that regular inspection and proper treatment, a balanced diet and sufficient mastication of the food will do much to prevent decay and pyorrhea.

The application of this programme to the daily routine of life will be a lesson to be taught on the Ontario Dental Health Day.

**STAKING FOR COPPER NOW IN KIRKLAND DISTRICT**

A report was received last week of the discovery of a noteworthy copper find in Clifford Township, northeast of Kirkland Lake. The find is near Verna Lake, being about twenty miles from the Quebec border and about fifteen miles north of the railway from Cheminis to Rouyn. The area where the copper find was made has been repeatedly prospected and has been the scene of more than one rush. In the past, however, the prospectors have been after gold. This time, it is copper that has actually been found. There is a staking rush on as a consequence of the find. The prospector who found the copper ore is Dave Oliver, of Kirkland Lake. The find is reported to be a remarkable one. Many are going in from Larder Lake to stake, that being the best route, and the trip being made by canoe.

**MR. F. L. CULVER MAKES APPEAL TO SHAREHOLDERS**

F. L. Culver, president of Beaver Consolidated, in a circular to shareholders dated September 30th, comes out with a personal appeal for support in the fight for control of Beaver to be staged at the annual meeting today (Oct. 14th). He asks for this support on what he cites as his record during 19 1/2 years in which he has been head of the company. "I want your support," says Mr. Culver. "I want to protect you. I want to distribute 1,000,000 of the common shares of Kirkland Lake stock among you shareholders in the way of a dividend." He then proceeds with a statement of his record as mine operator and concludes by telling shareholders "If you think they (D. B. Hanna, J. B. Tyrell and Mr. Brown) will handle your asset which I have created better than I can, give them your proxy. If you feel that my record as above entitles me to your confidence and support send me your proxy."

**BEAVER COLONY MAKES HOME NEAR HAILEYBURY**

It is remarkable the comparative lack of knowledge of the habits of native animals. The late Neh Faulkenham had a very wide knowledge of the birds and beasts of this North Land, and among the prospectors and other old-timers there are men who can tell you about the beavers and bears and the wolves and all the other beasts and the birds. But people generally are not much acquainted with these matters. In most cases they would like to know, but opportunity is denied them. So many people can not see a wild animal without trying to use a gun upon them or otherwise taking a quarrelsome attitude that the wild things soon learn to vanish at the approach of anything in the shape of human kind. Because of this the point made by The Haileyburian in its hope that a colony of beavers established near Haileybury may be allowed to continue at their present address without disturbance appears to be well taken. The Haileyburian appears to have the right idea in the matter in urging for such action and such lack of action as will assure an opportunity for real nature study. The Haileyburian last week says:—

"During the past summer a small beaver colony has become well established within a few miles of Haileybury in Dickson Creek. The colony consists, according to those who have watched their progress, of one full grown beaver and two smaller ones. They have been seen often during the past two months in the pond which they have built by the aid of a dam across the creek. The writer had the pleasure of a fairly good view of one them yesterday evening.

"These industrious little animals have done considerable work on their home. The dam is apparently well built and the result has been the raising of the water until a respectable pond has been formed. From a somewhat distant view, it did not ap-

pear that a house had been completed, but it is probably under way.

"We are informed that game wardens of the district are aware of the presence of the beaver and have some thought of endeavoring to remove them to a more suitable location, as they fear that the creek will freeze to the bottom. Whether this will be done could not be learned, but it appears unlikely that the animals, with their great senses of the fitness of things, would establish themselves there if they could not protect throughout the year. One would like to see them left undisturbed as there is a good deal to be learned from their habits and the opportunities of nature study are never too great for the average person."

**TO SPEND THE WINTER AT BATTLE CREEK, MICHIGAN**

Mrs. Harry J. Cain, convalescing from a recent severe attack of pleuropneumonia, left on Sunday, accompanied by Nurse Lytle, for Battle Creek, Michigan.

Mrs. Cain will spend the winter at the Battle Creek Sanitarium. After leaving Battle Creek she will take up residence in California.

Mrs. Lytle will visit friends in Detroit and Montreal before returning to her professional duties in the North.
