FIRST GOLD BRICK AT THE BARRY-HOLLINGER MINE

Mill Now Treating 110 to 120 Tons. Production Will Reach \$35,000 to \$40,000 This Month, It is Said.

A correspondent writing from Boston Creek last week to some of the outside newspapers, referred to the pouring of the first gold brick at the Barry-Hollinger on Tuesday, November 2nd, a date to be noted. The balance of the first full month's run of the mill was put through the refinery last week in the presence of a party of officials and shareholders, who, with President H. C. Crow, were on a visit to the property.

According to the correspondent production for the month of October will amount to \$25,000. The ore has been drawn chiefly from a surface dump which had to be removed before the arrival of winter, and was augmented by inclusion of some of the table concentrates recovered prior to the installation of the cyanide milling process. There was about 150 tons of this material on hand, running between \$40 and \$50 per ton. The ore in the surface dump ranged in value from \$4 to \$20 to the ton. Practically all this ore has been treated, and the mill is now being fed from underground operations entirely.

The milling plant is treating between 110 and 120 tons of ore a day at the present time, and operating 95 per cent. of possible running time. Manager Smith expects a production of between \$35,000 and \$40,000 during the current month. The grade of ore is expected to average around \$12 a ton. Costs of mining, milling and overhead are stated to be between eight and nine dollars. A substantial margin of profit is therefore indicated.

Permanent heating and water systems are being installed in all the buildings at the present time. This required a good deal of trenching, and with wet weather assisting, has created a dirty condition around the mine. When completed this improvement will add greatly to the comfort of the men and efficiency of the operation. A large addition is being made to the hoist house to accommodate the large new hoist which has to be installed before development of the 1,000-foot level can be carried out. The foundation has been completed and the frame work is in the course of erection. When installed the new hoist which is expected at the mine any day now, will be powerful enough to develop the property to a depth of 1,500 feet.

Altogether over a mile of underground work has been completed on the Barry-Hollinger. One thousand feet of shaft sinking and a similar amount of raising has been done along with 5,000 feet of drifting and cross-cutting.

At the 800-foot level, where deepest lateral work is being done, the No. 7 vein is being drifted on, and 125 feet of vein matter has been opened up to the east of the cross-cut and 45 feet to the west. Spectacular values were found in the first three rounds taken out to the west, and this face is still in good ore, showing over a width of 8 to 9 feet. In the east, preparations are being made to raise on the ore body 125 feet from the cross-cut. Here the vein has split into three sections, but for this distance it shows widths from 6 to 9 feet of schist and quartz. The calcite vein alongside the quartz on the upper levels showed widths of over 2 feet. At the 800-foot level this has narrowed down to around 6 inches, a factor that makes for much easier mining. The walls of the vein are much better defined at this horizon than on the upper levels also.

On the 300-foot level stope timbering is under way to extend lateral work on No. 307 vein east and west. This vein has been opened up for a distance of 100 feet, and shows a width of about 30 inches of high grade ore which it is claimed by the management will run between \$20 and \$30 per ton over at stopping width of 4 feet. Further development of the No. 5 vein at the 350-foot level is being commenced where left off some time ago.

Installation of the new hoist which should be at the property in the course of a couple of weeks will probably take a week. Following this it will be possible to commence releveling of the 1,000-ft. level, where first work will consist of drifting over to the No. 7 vein at this horizon. While the shaft is completed to this level it has been found advisable to withhold development until the larger hoisting apparatus is available.

As the mill bins hold around 250 tons of ore, there will be but slight delay in milling during installation of the new hoist. The first producer in the Boston Creek camp, Barry Hollinger established on a paying basis with a large acreage of ground to explore, is the principal operation in this district, which is becoming a very active mining camp where eight properties are now developing with Boston Station as their nearest railway point.

Every privilege carries with it a responsibility.

"Do it today" is an excellent motto, but the chap who can say, "I did it yesterday," has a better one.

SYSTEM OF GOVERNMENT CONTROL CHECKS EVILS

Mrs. Murphy, Magistrate, Says Plan Effective in Alberta and Does Check Bootlegging

Mrs. Emily F. Murphy, Police Magistrate and Judge of the Juvenile Court for the Province of Alberta, and known in literary circles as Janey Canuck, has come out strongly in support of Government control, as it is in operation in Alberta. Mrs. Murphy has been president of the Federated Women's Institute of Canada, and of the Canadian Women's Press Club, and vice-president of the National Council of Women, of the Social Service of Canada, of the Canadian Association of Child Protection Officers, and of the Canadian Committee on Social Hygiene, as well as being prominently connected with many other welfare organizations.

In the course of an interview, Mrs. Murphy stated, in part, as follows: "Government control may not control in other provinces but it does control in Alberta. It has not eliminated liquor in Alberta, however. It didn't aim to do so.

"So long as liquor is manufactured, it cannot be eliminated. Every quart distilled or brewed under Government inspection or control will find a consumer. It is meant to find a consumer.

"The same is true of the illicitly distilled or compounded stuff—unless it be found by the police. In this event it is ultimately emptied into the city sewers, or poured out upon the unappreciative prairies by the drastic officials appointed to enforce the liquor laws. This is not done for anything markedly moral but,

"1. Because the law requires it.
"2. Because Governments are not willing to share the profits with the local stills.

"3. Because the illicit liquor known as 'moonshine' is harmful in its effects—that is, considerably more harmful than properly distilled liquors.

"Personally, I am one who claims that neither whiskey nor beer are hygienic drinks. We would be vastly better without them—better physically, mentally and morally, but as long as these are produced for consumption we must regulate them in the best manner possible. To argue otherwise would be imbecility.

"There is no doubt that education along temperance lines is having an immensely powerful effect, and that one day the gospel of abstinence will gain a vastly greater hold upon our Canadian people, but until this happens we must rigidly control the consumption of liquor. Before Government control became the law of Alberta I opposed it vigorously, both on the platform and by my pen. I was fearful that our last state would be worse than our first. It seemed only logical that if the restrictions were removed there would be more drunkenness and crime. No living person could persuade me to the contrary. I had a fine line of arguments on the subject too.

"After a period of several years in which I have been called upon to enforce the present Liquor Control Act, both as a city and provincial magistrate, I am bound to acknowledge that my fears were largely unfounded. There was not even a rush of inebriety as I had predicted, the people showing a remarkable degree of restraint. The condition has steadily improved—again I say, not from any degree of spiritual enrichment on the part of our people—but because the law was well conceived, and is being well enforced."

NO MEETING OF BOARD OF TRADE—TUESDAY NIGHT.

There was a meeting of the Timmins Board of Trade called for Tuesday evening in the town hall to hear the secretary-treasurer's financial statement for the past season, and to select delegates to attend the annual meeting of the Northern Ontario Associated Boards of Trade at Cochrane to-morrow (Friday). There was no meeting, however, only two members of the board turning up in addition to Secretary W. O. Langdon. As a consequence the delegates for the Associated Boards meeting will have to be selected by the executive. As usual, it will not be a case so much of "selecting" as of securing delegates willing to take the time, trouble and expense to attend the gathering of the Associated Boards.

There were three main reasons for the failure to secure a quorum for Tuesday evening's meeting. One reason was the usual one of indifference, or neglect or call it what you will. The second reason, no doubt, was the very unfavourable weather. It was the worst night for many a long month—snowing, blowing and blustery, and heavy walking. The third reason was the Conservative convention at Matheson. As one man put it next day, "Every public-spirited citizen of Timmins was down at Matheson on Tuesday to back up Fred Kenning.

Even taking all three reasons into full account, however, the lack of a quorum was somewhat discouraging. There were over eighty notices sent out for the meeting and three replies does not appear to be a good percentage of returns.

DEMPSEY-TUNNEY FIGHT PICTURES AT SCHUMACHER

There is great interest this week in the exclusive official motion pictures of the Dempsey-Tunney championship fight, as shown at the Maple Leaf Theatre, Schumacher, each evening through the whole week. These pictures are the ones authorized by Tex Rickard, and showing the battle round by round and blow by blow, as taken at the ringside on the occasion—an occasion that gathered what is said to have been the largest audience that the world has seen for such a feature. The crowds at Schumacher have been good but not record-breakers like at the fight itself. The general opinion, however, is that the pictures give a far better view of the big battle than could be seen by any ticket-holder at the fight itself at Philadelphia. Those seeing the pictures this week say they wouldn't have missed it for three times the admission fee. There are four showings yet,—to-night, Friday and Saturday evenings and Saturday matinee—when any and all interested will have opportunity to see Dempsey and Tunney in action in the fight that won for Gene Tunney the championship belt of the world.
