McINTYRE ORGANIZATION FOR FIRST AID EFFORT

Reference Made in Annual Report of Department of Mines on Accidents

Elsewhere in this issue will be found a review of Bulletin No. 63 of the Ontario Dept. of Mines. This bulletin deals with the mining accidents in Ontario during the year 1927. In the review of this bulletin as published elsewhere by The Advance, mention is made of a reference in the report to the McIntyre Mine's efforts along the line of first aid work. The complete reference in the bulletin is as follows:—

"The McIntyre-Porcupine Mines, Limited, during 1927, formed an organization which was very effective in the prevention of infection after accidents. The method is described by D. E. Keeley:—

"First-aid dressing-stations have been established at both No. 5 and No. 11 shaft heads, and strict instructions have been issued to shift bosses and employees that every injury, however slight, is to be reported to the dressing-station, as soon as possible. The dressing-station is in charge of a trained first-aid man, and a twenty-four hour service is provided.

"All men who have received an injury have the wound thoroughly cleansed, application of mercuriochrome, 2 per cent., and sterile gauze dressings; and where men carry on with their work, protective dressings are applied before going on shift again.

"First-aid kits have been provided at various stations underground, and injured men are able to procure attention at once, and are seen and redressed at the dressing-station.

"Success in prevention of infection is greatly due to insistence on the men reporting slight injuries at once to the dressing-station, and to the co-operation of our staff of superintendents, shift bosses and the men themselves in enabling routine treatment of wounds to be carried out.

"First-aid kits have been provided at various locations on the surface, such as at the mill, carpenter's shop, steel shop, assay office, electrical shop. Any injury occurring at these places is given immediate treatment and referred to the main dressing-station.

"Bonuses are paid to shift bosses who have the lowest record of lost time from accidents for periods of three months and to all shift bosses underground who have no lost time accidents."

Toronto Globe:—The death is reported in Chicago of Jacob Franks, whose chief claim to fame and sympathy is that he was the father of little Bobby Franks, the lad who was murdered by Loeb and Leopold, who are now serving a life sentence for the hideous crime. He never recovered from the grief and shock of that tragedy.

NOT ALWAYS DEPLORABLE FOR PEOPLE TO OWE MONEY

Kitchener Record: "A prominent banker makes the statement that four-tenths of all wage earners are in debt. Only about a quarter of the country's population, he says, are free from financial worries. This sounds somewhat alarming, and might lead to the conclusion that we are an improvident nation of spendthrifts. The feeling that one owes money for necessities or luxuries is to the majority a disquieting one. There are indeed people who take their financial responsibilities very lightly and refuse to lose any sleep over discrepancies in the personal or family budget. But the average man or woman feels uncomfortable under such a strain. There are, however, sound debts. The man who owes for a home, an automobile, a piano or other furniture may be in the soundest kind of financial condition. A mortgage is no longer regarded as a sort of family skeleton, but as a very sound and rational business investment."

WOLVES SLAUGHTERING DEER IN COBALT SECTION

The Cobalt correspondent of The Sudbury Star last week wrote that paper to the effect that reports brought to Cobalt by men whose business takes them into the bush, suggested that wolves had been creating great havoc among the deer of the section, and that the wolves have become so bold that they are ravaging fairly close to settlements. While out in the Portage Bay district, 14 miles to the west of Cobalt, Pete Johnson and Charles Stewart, who were estimating timber, came across the carcasses of 14 deer in one day's travelling, they stated on their return to town. Both men have been bushmen all their lives, and they declare they had not before witnessed such slaughter of the deer, who had been badly handicapped by the deep snow which covered the ground. The men saw no wolves, nor were any heard, but tracks were noted in different places after fresh snowfalls. There have been a number of complaints in this section of the activity of the wolves and there is some talk of bringing the matter officially to the attention of the government.

Racked by Rheumatism

"Fruit-a-tives" Brought Speedy Relief

MR. S. FLOYD.

Read this honest letter:
 Nanaimo, B.C.—"I had been suffering with rheumatic pains in my shoulders. Decided to try 'Fruit-a-tives'. In a very short while I had relief. Also had a touch of bleeding piles, 'Fruit-a-tives' worked like a charm. I think they are really marvellous." —Mr. S. Floyd.

"Fruit-a-tives" is composed of fresh fruit juices intensified and combined with tonics. The easy, natural action corrects constipation, stomach, kidney and bladder troubles, rids the system of poisons, purifies the blood, and banishes rheumatism and kindred pains. "Fruit-a-tives" is sold everywhere. 25c and 50c a box. Test it—to-day.

HARDY STRAINS OF RED CLOVER FOR NORTH LAND

Kapuskasing Expert Emphasizes the Importance of Hardier Types of Clover for This North.

In a letter to The Advance last week, Mr. L. H. Hanlan, of the Dominion Experimental Farm at Kapuskasing, says:—

The soil and climate of Northern Ontario are preeminently well adapted to the growing of luxuriant crops of red clover. This is largely due to the high lime content of the soil and the ability of red clover to thrive under cool, moist conditions with a comparatively low mean temperature.

Red clover makes a very excellent forage crop for the dairy farmer, as it furnishes him with an abundant supply of good hay containing a high percentage of protein for winter feeding and it is also very desirable as a pasture plant in summer.

In a climate such as is found in Northern Ontario, the source of seed is often the deciding factor between success and failure in the growing of red clover.

At the Dominion Experimental Station, Kapuskasing, Ontario, an experiment has been conducted for a number of years with the object of comparing the results obtained in hardiness, yield, and quality of hay produced from different varieties and strains of red clover procured in different sections of Canada and Europe.

From this experiment it was found that the more southern grown sorts, particularly those from Italy, largely killed out during the first winter, and, consequently, would have been a keen disappointment to settlers depending on the crop to feed their cattle.

In fact, the outstanding success in clover growing in many parts of Northern Ontario may be largely attributed to the fact that some good hardy seed was obtained in the early days, and since then these districts have been using a large percentage of their own northern grown seed.

Winnipeg Tribune:—Canada's part as a nation in the St. Lawrence Waterways scheme, if the Government has its way, will be that of a spectator. It is amazing, it is incredible, but no other meaning can possibly be read into the passage above quoted.

Toledo, Ohio, Blade:—It doesn't help much to tell the nurse you had the right of way.

Assam, the native home of the tea bush, produces teas which are famed the world over for their strength, richness and flavor.

The superior and distinctive quality of Red Rose Orange Pekoe is largely due to these fine quality Assam teas, of which it is chiefly composed. Every package guaranteed. 7-E

HIGH-GRADE SAMPLES FROM RUN OF THE PRESS.

Playing bridge while flying is getting to be a popular pastime, which is all right so long as no one gets a grand slam.—Wichita Eagle.

It has been our observation that persons who paint Russians in such glowing colours don't remain there to enjoy the view.—Philadelphia Inquirer.

Apparently there would be a great future for any young man who could invent a way to raise campaign funds by an act of Providence.—San Diego Union

Mayor Thompson, of Chicago, seeing his followers beaten at the polls, may lay the blame on another British institution,—the ballot.—Ottawa Journal.

Someone suggests sending missionaries to Chicago, but perhaps the missionaries had better be consulted about that.—Wichita Eagle.

One theory is that after paying the expenses of delegates to all the conferences, the nations won't be able to afford any first-class wars.—San Diego Union.

It is a somber thought that there is a great new generation springing up in the land that gives you a blank look when you mention Petticoat Government.—Detroit News.

Mail and Empire:—Barron Okura, who passed away on his 91st birthday, ascribed his long life to a diet of eels and rice, and no doubt his death may be ascribed to the fact that eventually he had enough of them.

SURFACE DEVELOPMENT STARTING ON GEM LAKE.

In a progress report received from mine manager Harry L. Donaldson, he states that due to favourable weather conditions, actual surface development of the Gem Lake property will begin during the next few days in a large way. He mentions that in his preliminary examination of the workings so far opened up, he was much pleased with the showings. There is a good wide break with plenty of shearing and lots of free gold show in the trenches, also tellurides.

The main working has been cleared over a length of 1,000 feet with a width of 150 feet and preliminary prospecting has been started on the adjoining claims with a view to tracing the full length of the vein system. In this preliminary prospecting, several additional veins have already been located.

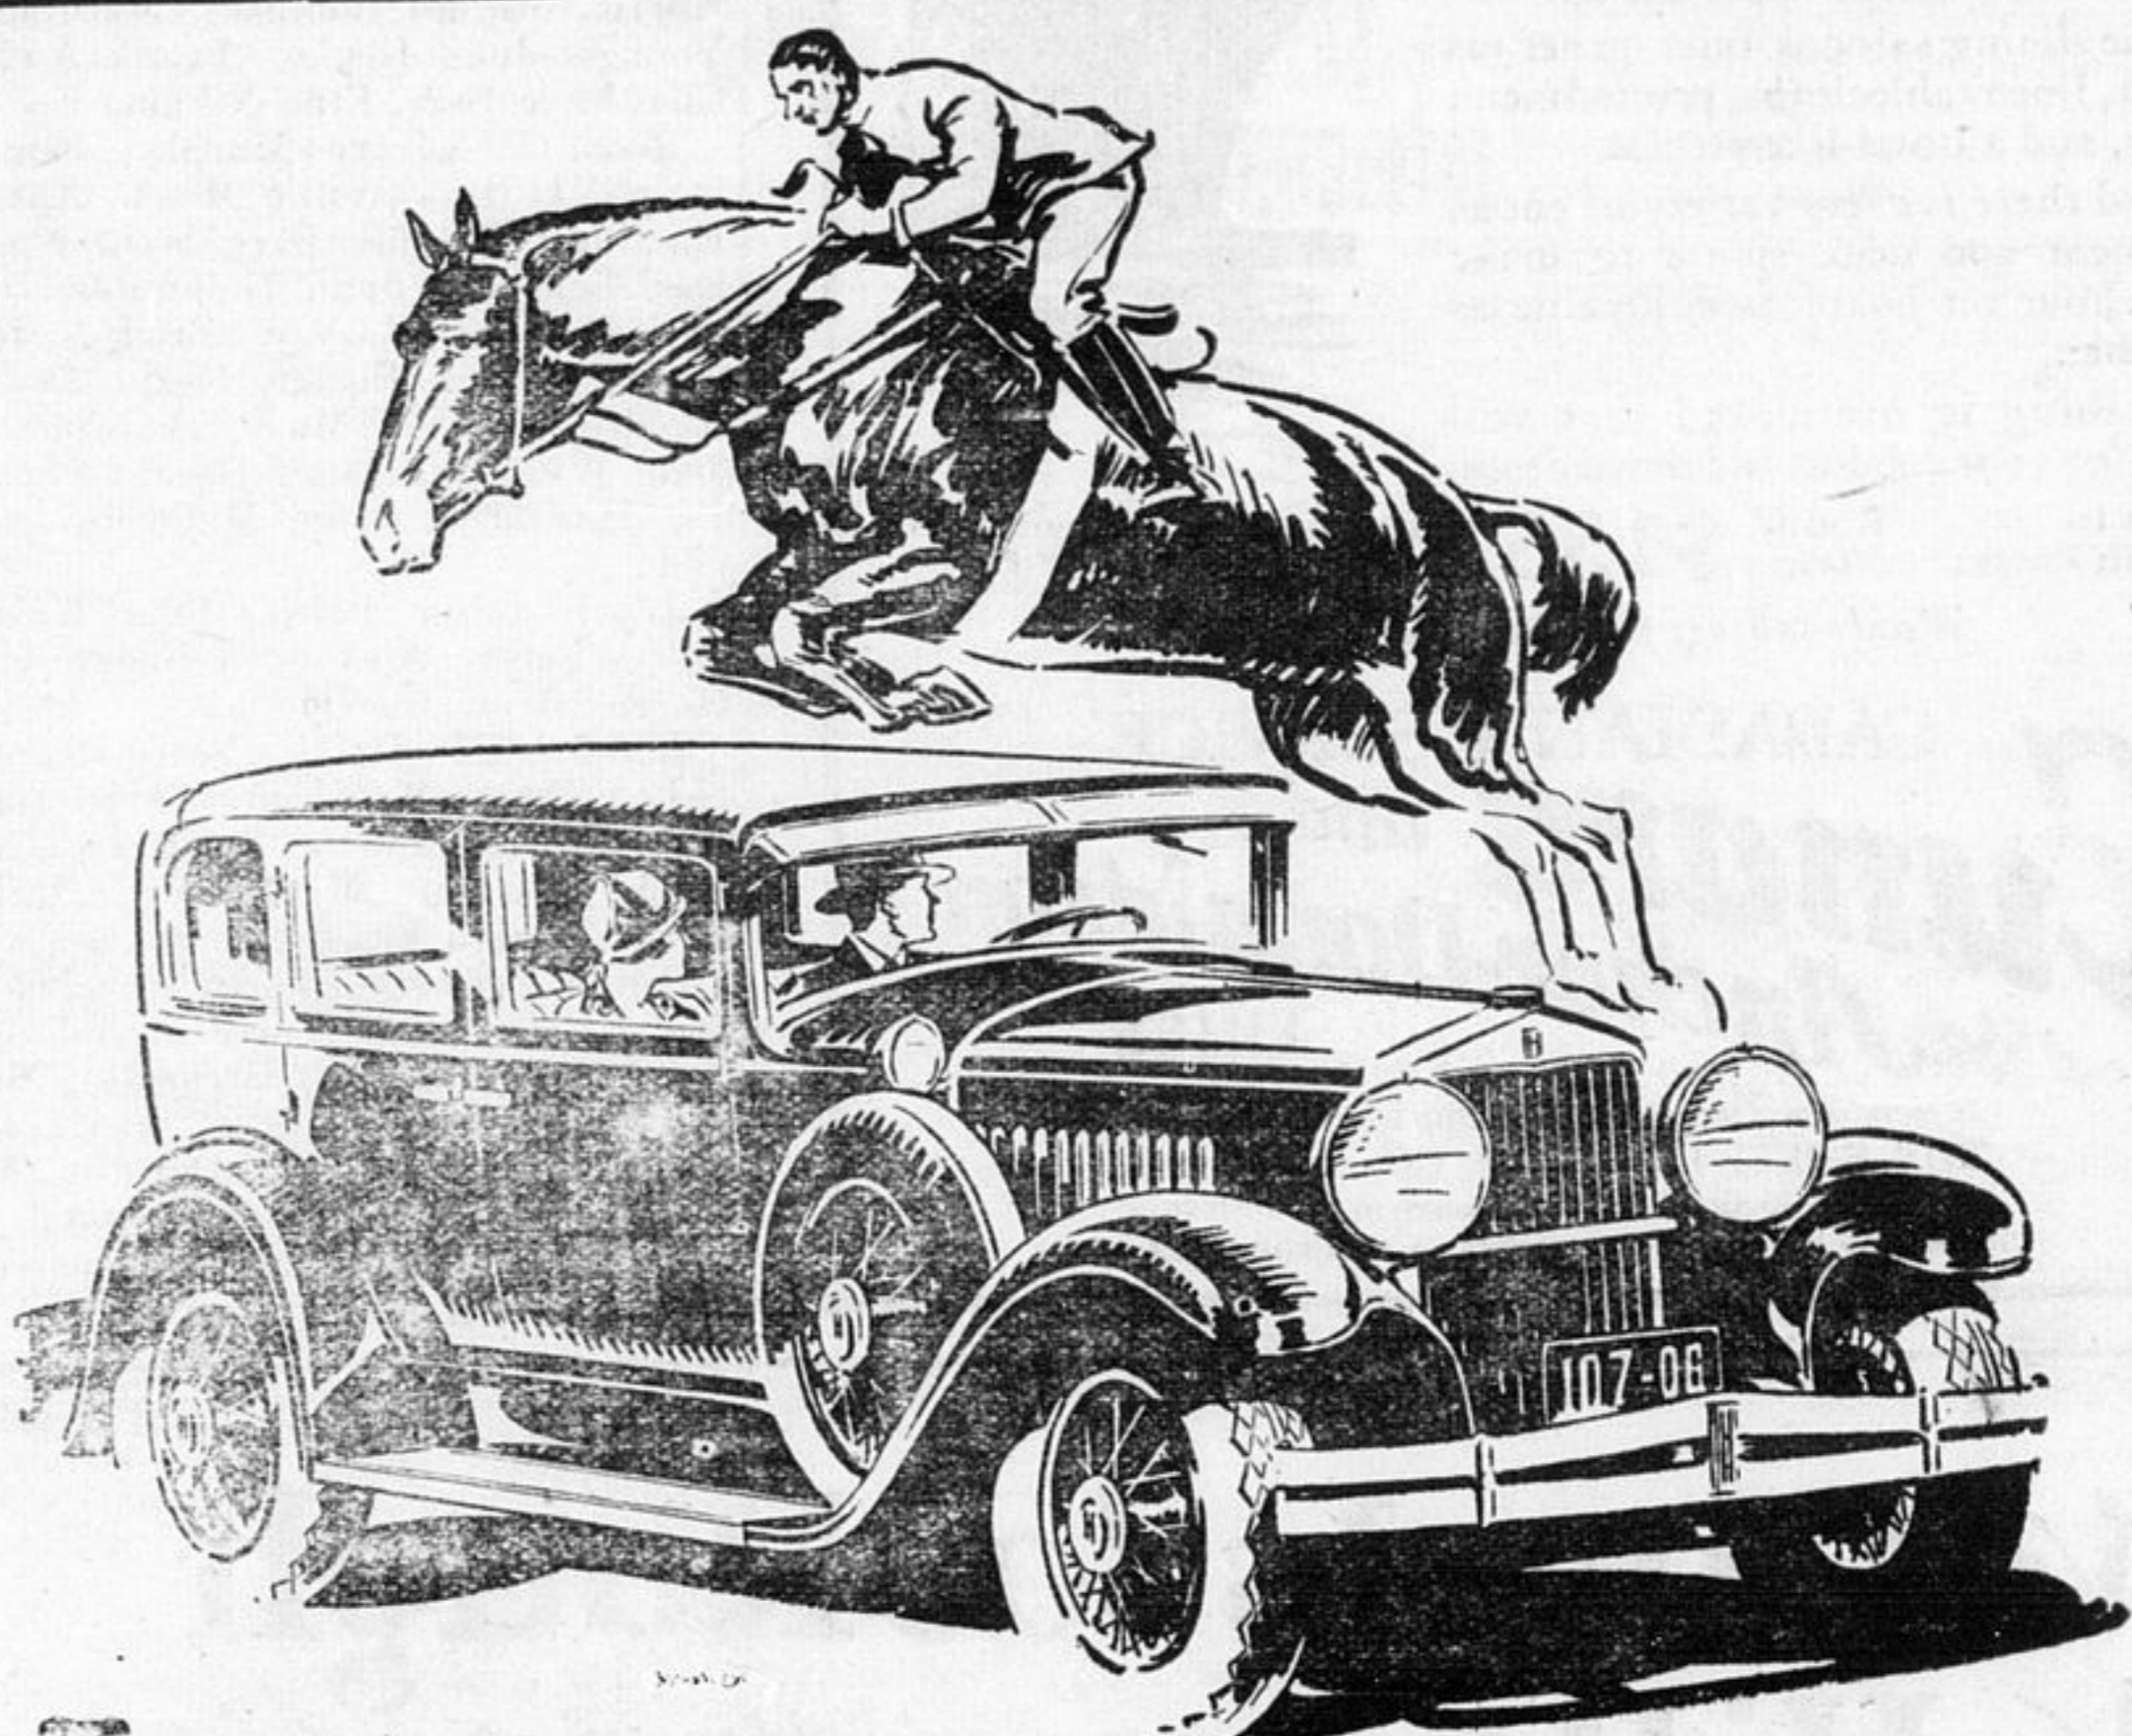

It is to be recalled that the Gem Lake Mines, which has recently been financed by Toronto and Winnipeg interests, hold 52 mining claims having a length on the break of over four miles. This property has been examined and favourably reported on by Mr. Douglas G. H. Wright and Mr. Cyril Greenland on behalf of N. A. Timmins, Inc., who, it is understood still retain a substantial interest in the property.

Arnprior Chronicle:—A local Scotsman submits the following for the woman's page. It's good at that. "If you have odd stockings left from two pair of fancy hose, dye them a darker shade and then you can use them as mates."

Rastus—"Quick, Sam, a wildcat jes' run into yo' house where yo' wife am."

Sam—"Well, he'll jes' hab to git out de bes' way he kin—dat's all."

THE quality of Rideau Hall Coffee never varies. Perfectly blended and roasted, then Vacuum packed.

LOW-for Beauty, Safety and Comfort

LOW grace of line so impressively achieved in the new Century Hupmobiles is more than a matter of advanced body design. Double-drop frames and new spring mounting play an important part in producing low, balanced smartness—without sacrifice of road clearance or headroom. In detail, the bright chromium plating of exposed metal, the artistic lamps and radiator, the beading and belt work further suggest the individuality of custom-built cars. Your enjoyment of the fleetness and power of the Century Six and Eight, are heightened by the positive steeldraulic four-wheel brakes and an ease of steering new in your experience of high-grade cars.

An unlimited range of beauty in 50 standard and custom-equipped models now available in three different wheel bases—the Six of the Century, the Century Eight and the Century 125 Eight.
