

AIRSHIPS DELAYED IN SEARCH FOR A. TAYLOR

Three Days Elapsed Before Permission Came from Ottawa to Use Airships.

Friends here of Mr. Andy Taylor, formerly of this town, will regret the delay on the part of the Dominion Government in allowing the use of Federal airships in the search for Mr. Taylor when it was known that he was lost in the bush in the Pas, Manitoba, area. The Pas Herald of recent date refers to this delay, and also gives special mention of the efforts made by Mac Lang, M.P., to get over the red tape at Ottawa. The Herald is in error in saying that Mac Lang is the "member for Haileybury in the Dominion House for the constituency in which Mr. Taylor resides." Mr. Lang is the member for South Temiskaming, and resides at Haileybury. His services in such a case could safely be depended upon to do all possible to help and to make help possible by the doing away with red tape.

In reference to the matter The Pas Herald, of the Pas, Manitoba, says:—

"Eighteen men are scouring the muskeg and dense timber on the shores of Shirley Lake one of the numerous offshoots at the great Kissinging Lake, in search of Andy Taylor, of Timmins, Ontario. Taylor has been lost for more than a week, but the inaccessibility of the area where he is lost, and the consequent difficulty of asking for and procuring assistance has resulted in loss of time in getting the effort organized.

"Sergeant Grennan, R.N.W.M.P., stepped off one of the Western Canadian Airways machines here Sunday evening and gave the first authentic information of the effort to find the missing man for whom a large number of prospectors in the vicinity are looking.

"Kissinging Lake or Cold Lake as it is more frequently called covers roughly an area of four hundred square miles. Its numerous arms reach out like those of a prodigious octopus, and travellers there are forced to make long and difficult portages through the muskeg and almost impassable forests of spruce and jack pine, and when crossing the water to steer between innumerable islands which often bewilder the novice.

"Taylor in company with two associates named McCoy and Martin were making one of these difficult portages in the heat of the day when the party became very thirsty. McCoy and Martin were disposed to go ahead on the chance of coming to water, Taylor desired to do some scouting in the vicinity to try to locate a supply. This he eventually did the other men meanwhile agreeing to wait for him. After forty minutes waiting the two started out to look for Taylor but were unable before darkness fell to discover any signs of their missing companion.

"The men made camp for the night and decided that it would be better to go back to headquarters and sound the alarm and procure such help as might be available. Word was sent to The Pas by airpilot with a request that something be done to get the consent of the Dominion forestry service to the use of one of their planes.

"Mayor Stitt of The Pas immediately wired Ottawa asking for this assistance. Other messages urged speedy action. Action was finally secured after the lapse of three days through the personal effort of Malcolm Lang, member for Haileybury in the Dominion House for the constituency in which Taylor resides.

"Immediately the advice was received Sergeant Grennan was asked to accompany the forestry service plane and to organize the drive to locate Taylor. When he returned Monday the sergeant said they had not been able to locate the missing prospector, and that the difficulties of making the search were quite appalling owing to the nature of the country being scoured.

"Sergeant Grennan said that the pilots of the Western Canada Airways were exceedingly helpful in giving transport facilities to searchers whenever such was possible and he believes that the search for Taylor will end successfully unless the man shall have become distracted under the extreme difficulties of the situation, and the torture of the mosquitoes and biting flies.

"Up to the time of going to press the missing man has not been located although traces of him have been discovered."

NORANDA MOST VALUABLE MINE ON THE CONTINENT

This is the Opinion of Engineering and Mining Journal in Reasoned Article.

Noranda Mines, next to the Bingham mine of Utah Copper, is the most "valuable" mine in North America, according to the Engineering and Mining Journal, which comments on it editorially in its last issue under the caption, "The Latest Hundred-Million-Dollar Mine." The editorial is as follows:

"Recently the stock of Noranda Mines, Ltd., crossed sixty dollars per share. With an outstanding capitalization of 2,168,566 shares, this represents a stock-market valuation of well over a hundred million dollars, which makes it, next to the Bingham mine of Utah Copper, the most 'valuable' mine in North America. In fact, few large mining companies, even among those having widely diversified interests surpass Noranda in market value: Anaconda, Kennecott, Utah, American Smelting and Refining, International Nickel, and Consolidated Mining and Smelting alone, of American mining corporations are valued higher by the investing public. The famous Hollinger shrinks well into the background, being valued at only seventy million.

"Last January the ore reserves of Noranda contained about eighty thousand tons of copper, and six million dollars' worth of gold—certainly nothing to justify anything like the present valuation. Since then, more high-grade ore has been developed at depth, the amount of which has not been announced, but about which speculation has been rife. Even assuming that the ore reserves of six months ago have been doubled, the value of the property, based on known assets, would not be more than a third of its present valuation in the market. Plainly, the speculative public thinks it has found a bonanza, with unheard-of wealth waiting only to be discovered by the drill.

"Well, why not? Seven years ago the name Noranda was meaningless, and the Horne claim, as well as the whole Rouyn mining district of Quebec in which it is located was unknown to the hundreds of prospectors that had been roaming over the North for years. Six years ago it was nothing but an undeveloped outcrop. Five years ago the Quebec Superintendent of Mines, speaking of the district, stated that 'nothing spectacular has come to light.' Not until three years ago did development reach the stage when a smelter began to be talked of: the stock then closely held, was valued at around seven million dollars: Less than a year ago was the producing stage reached and a smelter blown in.

"Who can deny the man in the street that five, or ten, or a hundred times as much ore may be discovered in this phenomenal deposit as has already been found? The speculator must speculate, and who can blame him for taking a chance here, where the management may be presumed to be honest, and where the ore is known to be rich, rather than in some unknown wildcat? Mining is never just a stodgy business but not often can it boast of a romance like this.

"And yet, one may well suspect that those who are gambling in this stock are not romanticists so far as the ore is concerned. They are, rather, market romanticists, hoping that the price of the stock may continue to climb, and that they may get out at the top. Which as we all know, is a dangerous game."

TRY THESE ONES ON YOUR TYPEWRITER SOME TIME

A man who is an advocate for the teaching of spelling by sight, as against the old-time method of by sound alone, and the more modern method of using both sight and sound, once told The Advance that he could correctly spell any word at any time after he had once seen it. Accordingly the following is passed on from The Northern Miner last week:—

"Going through a technical book the other day we noticed this one: Natrium Acetylparaminophenylarsenate.

Also Alphamoniodisovalerianylurea.

Likewise Dioxybenzolhexamethylenetetramine.

And this beauty:

Trimethylbenzoxypiperidinumhydrochloride.

Mr. and Mrs. Wm. Alfred and young son, of North Bay, were Timmins visitors last week.

START COUNTER-ACTION AGAINST HEARST PAPERS

Canadian Concern Makes Move in Courts Against the Big United States Publisher.

An action for the recovery of \$978,630 from William Randolph Hearst and one of his companies has been instituted in Quebec by the Canadian Paper Sales, a subsidiary of the Canadian Newsprint Company, which until recent months handled the export sales for about 50 per cent. of the newsprint produced in the Dominion.

Some time ago Hearst instituted in the U.S. a suit for some \$24,000,000 against the companies formerly selling through the Canadian Newsprint Company. The present Canadian suit is in the nature of a counter action against Hearst and his companies.

The Canadian interests have gone one step better and have seized shipments of newsprint consigned to Hearst on the ground that the paper becomes the property of Hearst as soon as it leaves the mills. The seizure has been made to keep the merchandise

from leaving the jurisdiction of the province of Quebec.

The Canadian Newsprint interests are, therefore, asking the Canadian courts to declare the seizure valid, and in default of the payment of their close to a \$1,000,000 claim, that the shipments be sold and the proceeds used to satisfy in full the claims of the Canadian Newsprint interests.

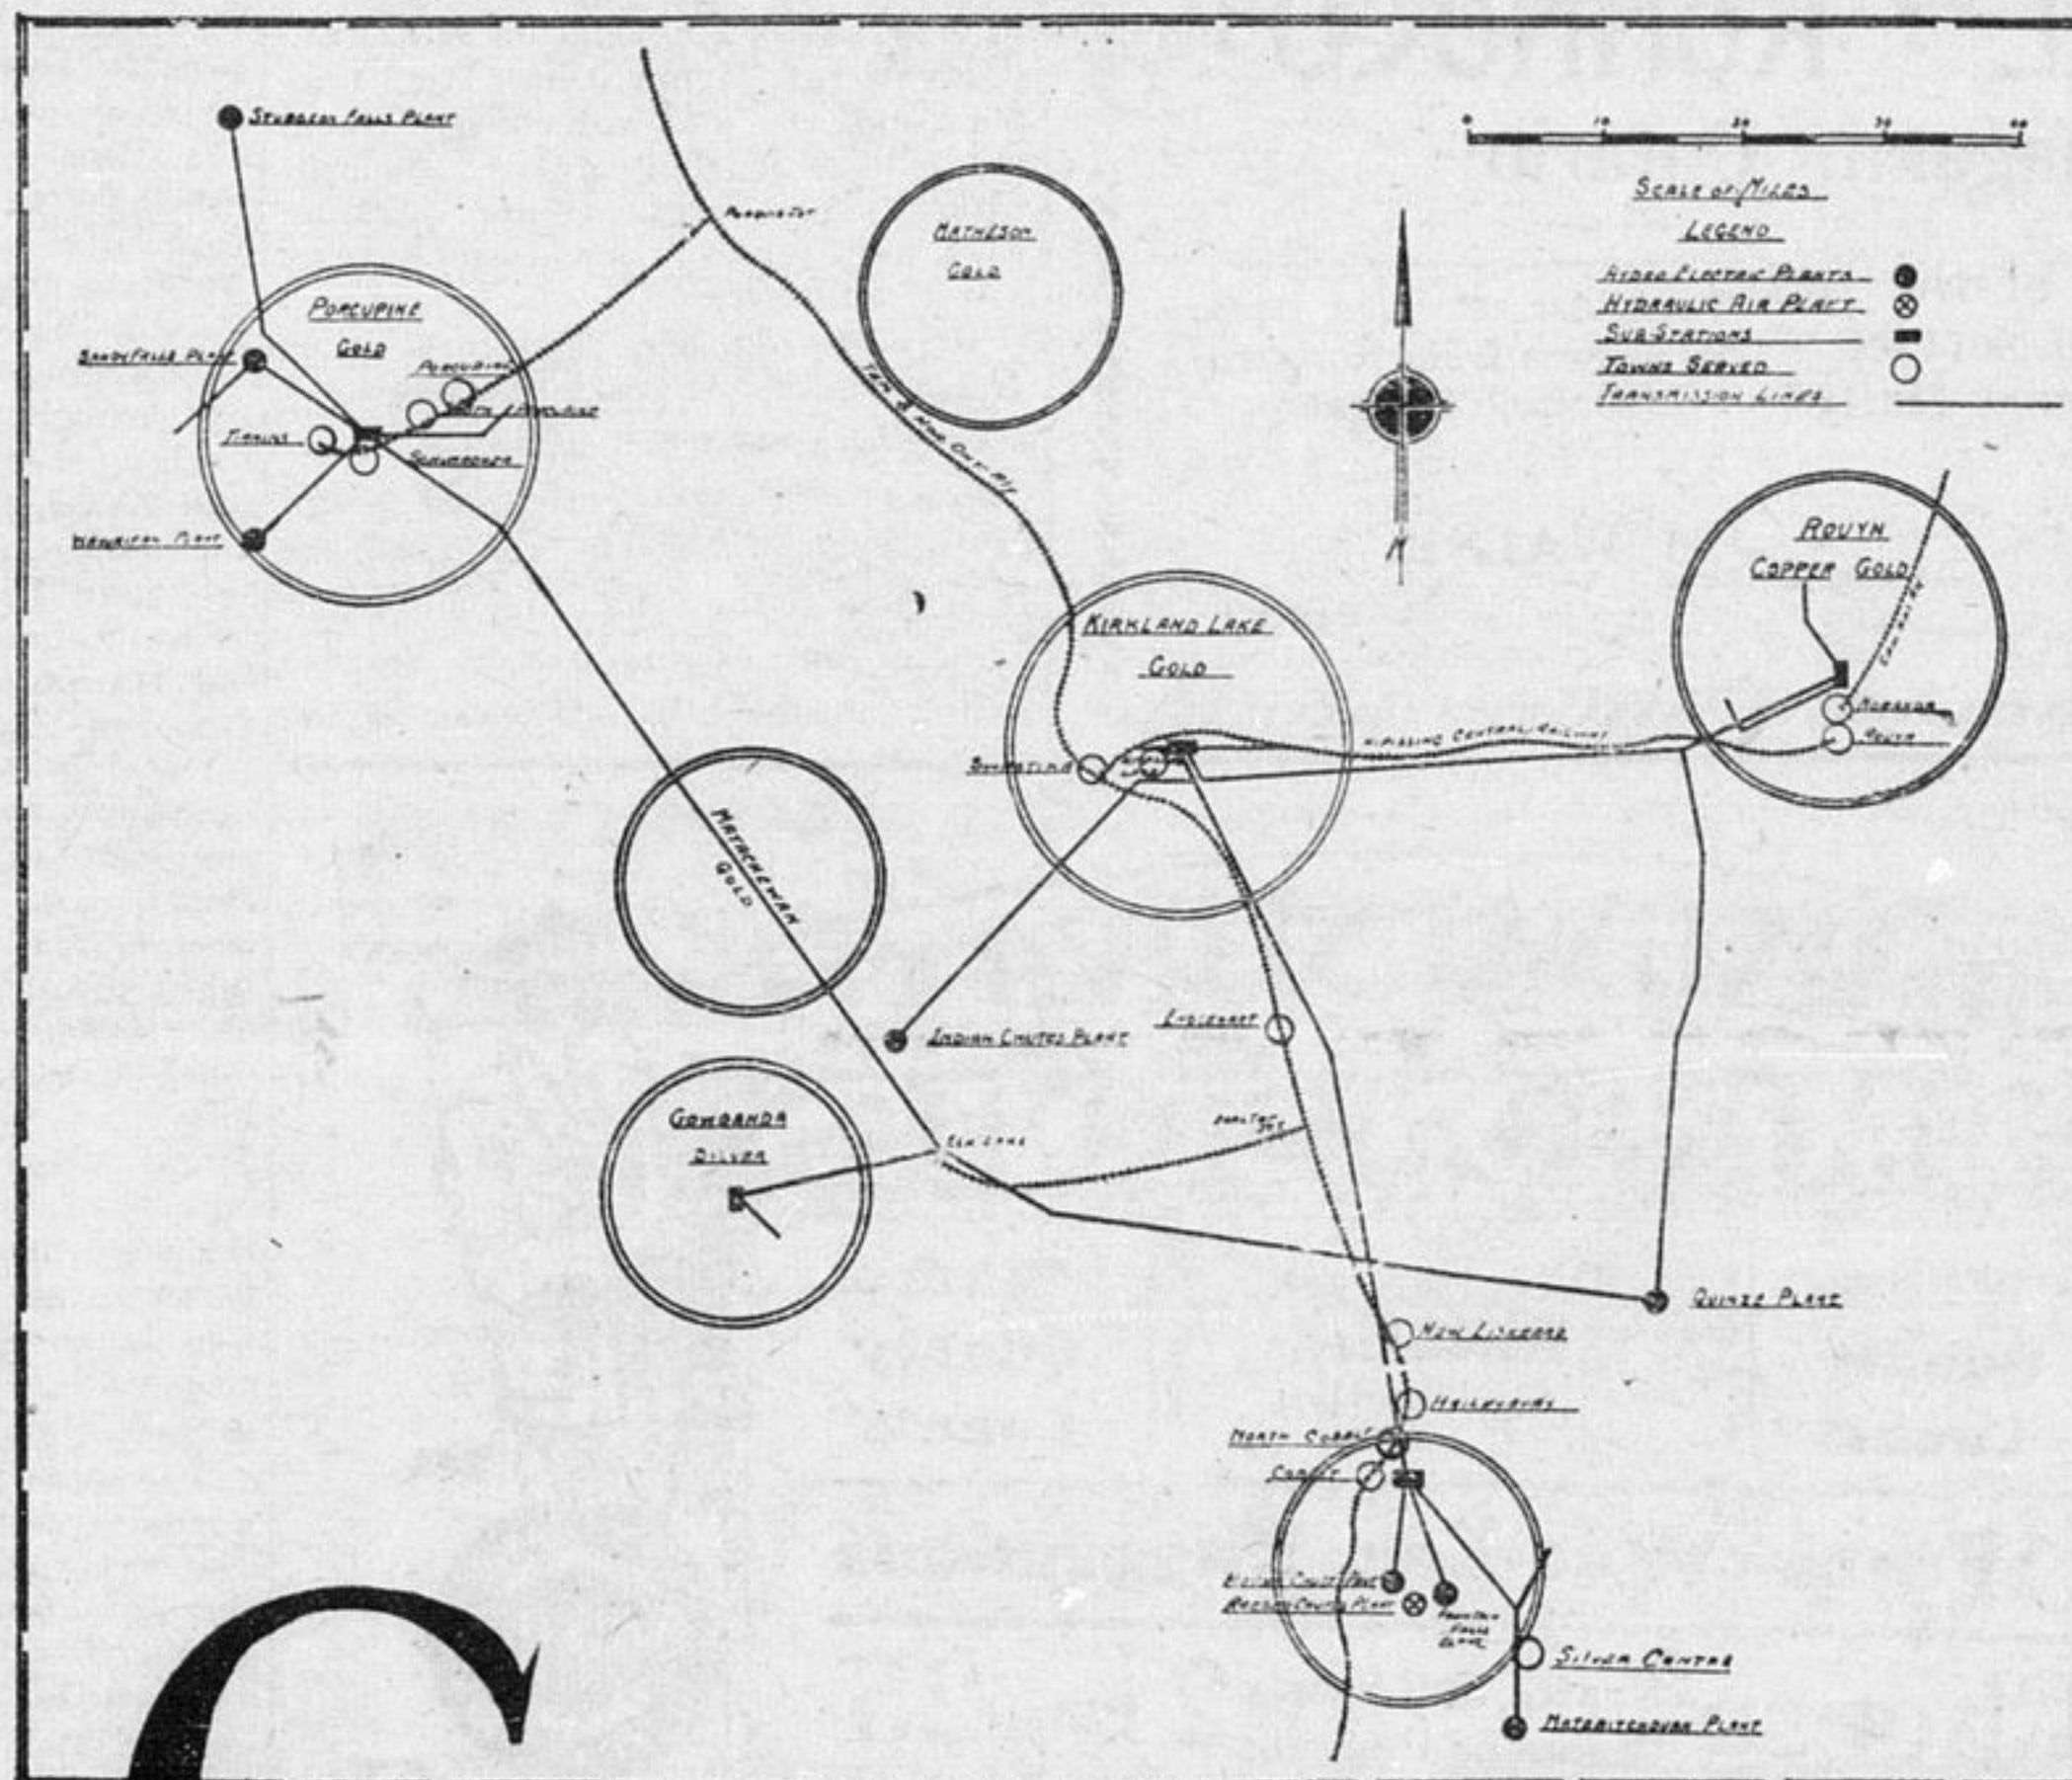

The shipments of paper sold to Hearst which have been seized apparently were produced by Anglo-Canadian, Brompton, and the Lake St. John mills. Enough paper has been seized to satisfy the claims of the Canadian Newsprint group.

BLUE QUARTZ MINE WILL LIKELY RE-OPEN SOON

The Blue Quartz Mine, east of Matheson, which recently suspended operations for a time, is understood to be preparing to re-open at a comparatively early date. It is reported that satisfactory arrangements in a financial way have been made in England, and that active work on the property will be taken up again very shortly.

Luke O'Connor, of Sudbury, has been retired on pension after 48 years service with the C. P. R.

CANADA NORTHERN POWER CORPORATION Limited

Sketch Map of Territory Served, Showing Location of Towns and Hydro-Electric Plants.

CANADA NORTHERN POWER CORPORATION LIMITED, controls and operates the undermentioned Public Utility Companies in the Provinces of Ontario and Quebec:

NORTHERN ONTARIO LIGHT & POWER COMPANY LIMITED
NORTHERN CANADA POWER LIMITED
GREAT NORTHERN POWER CORPORATION LIMITED
NORTHERN QUEBEC POWER COMPANY LIMITED
(Formerly Quinze Power Co. Ltd.)

The Consolidated Companies supply electric light, heat and power to 9,015 customers in 18 communities, having a total population of 60,000:

Buckle	Noranda (Que.)	South Porcupine
Cobalt	North Cobalt	Swastika
Englehart	Porcupine	Teck
Tisdale	Schumacher	Haileybury
Kirkland Lake	Silver Centre	Rouyn (Que.)
New Liskeard	Whitney	Timmins

In Ontario, Canada Northern Power Corporation Limited distributes power through its Subsidiaries

NORTHERN ONTARIO LIGHT & POWER COMPANY LIMITED
NORTHERN CANADA POWER LIMITED
GREAT NORTHERN POWER CORPORATION LIMITED

And in Quebec through its Subsidiary

NORTHERN QUEBEC POWER COMPANY LIMITED

In a few weeks, employees of the allied Companies will offer the Companies Customers an opportunity to become profit-sharing partners in this established and successful enterprise through the purchase of the
