The Committee Meets to Decide Mother's Fate

"We would be glad, of course, to have mother come and live with us," says one of the sons. "But the trouble is our house is so small."
"We haven't a spare room," adds the daughter-in-law regretfully.

And so it goes. One after the other makes excuse. Each has his or her own problems, and responsibilities.

Widowed at 65, Mother's fate would have been vastly different had father left any estate, or adequate life insurance. Mother could have had a nice little monthly income of her own if father had planned aright—an income guaranteed by the Mutual Life of Canada, and payable as long as she lived.

This Mutual Monthly Income policy is one every man with family responsibilities should seriously consider. Any Mutual Agent will be glad to tell you the advantages of this policy. Let us send you our folder "The Greatest Thing in the World of Insurance."

MUSEUM OF MINES GIVES HONOURS TO MINE MEN

Life Membership Given to A. F. Brigham, Dr. Macintosh Bell and Others by Museum of Mineralogy

At a dinner one evening last week at the York Club, Toronto, life memberships and life fellowships were conferred by the Royal Ontario Museum of Mineralogy on men whom it was desired to honour. The honour of life membership was given to: A. F. Brigham, general manager of the Hollinger Consolidated Gold Mines, Timmins; Dr. Macintosh Bell, J. G. Dickenson, H. L. Kerr, and J. L. Agrew.

Hon. Chas. McCrea, Minister of Mines for Ontario, and Dr. T. L. Walker, Director of the Royal Ontario Museum of Mineralogy, were the hosts at the dinner at the York Club on the occasion of the conferring of life memberships in the Royal Ontario Museum of Mineralogy.

In a brief address Dr. Walker outlined the objectives of the Museum, and pointed out that the growth of the collections in the Museum was due to the hearty co-operation of gentlemen connected with the mining industry, with the Director and staff of the Museum. He also indicated that the biggest and best specimens from each mining region should be preserved and displayed as a record of the type of material that has added so much to the wealth of Ontario, and as an indication of what may yet be found.

J. B. O'Brien, Chairman of the Board of Trustees of the Royal Ontario Museum, briefly outlined the growth of the Museum, and pointed out that, in view of the present crowded condition of the exhibits and the comparative inaccessibility of the Natural History museums, the trustees hope in the near future to build a new wing to the Museum, with ready access to any one of the five constituent museums from the main entrance.

In acknowledging the great indebtedness of the Royal Ontario Museum of Mineralogy to the men connected with the mining industry, Hon. Chas. McCrea stated that it was the desire of the trustees and of the Director that those who had made notable contributions to this museum, or had rendered exceptional service of great value, should have a closer connection with the museum by becoming life fellows and life members of the Royal Ontario Museum of Mineralogy.

Because of the appreciation felt for donations such as those referred to and the general assistance to the purposes for which the Museum stands, Senator M. J. O'Brien and Joseph Errington were made life members of the Museum. Life membership was conferred on the five mining men noted above.

STRAY BULLET WOUNDS SUDBURY BOY IN CHEEK

Recently the Timmins police have been quietly conducting a campaign to stop the practice of boys and other unauthorized persons carrying guns or using them in the town limits. The value of such activity is shown by an occurrence at Sudbury last week. A boy of seventeen was walking on the C.N.R. tracks on Notre Dame street when he received a severe wound on the cheek from a gun shot. He heard the sound of shooting but could not see who was using the rifle or rifles. The bullet did not pierce the young man's face but made a jagged wound and left a bad bruise on his face. He was treated at the hospital and the wound is not serious, but there is surely no reason why he or anyone else should suffer through the idiotic carelessness of some moron with a rifle who has no better sense or decency than to endanger people by using a gun in this way.

A gentleman who has been twenty-six years in this North Country, said this week that he had never seen the rivers and lakes of the North as high as they are this fall in any previous year in his knowledge. For a fall season, the height of the waters is a record. Even in spring flood time, he says the waters, as far as he remembers were never as high as at present, except in the record flood time of last spring.

MOTHER OF TWINS HELPED

Restored to Health by Taking Lydia E. Pinkham's Vegetable Compound

Mitchell, Ont.—"I had little twin babies and for quite a while after I was so weak I could not do my work because of pains all the way up my legs at the back. I also had headaches and got very little sleep. I took Lydia E. Pinkham's Vegetable Compound, and soon I was able to get up and do my work. I have taken three bottles and I am fine, do my work without trouble and am gaining in weight and strength. I will gladly recommend the Vegetable Compound to anyone."
—Mrs. F. STATTON, Box 220, Mitchell, Ont.

TEMISKAMING BRANCH OF ALUMNI FEDERATION

Sixty Present at Inaugural Meeting of Graduates of Toronto University at Haileybury.

The following from the last issue of The Haileyburian will be of general interest to graduates of the University of Toronto in the North Land and elsewhere. It refers to the formation at Haileybury of the Temiskaming Branch of the Alumni Federation of the University of Toronto. The Haileyburian says:—

The formation of the Temiskaming Branch of the Alumni Federation, University of Toronto, with a substantial membership, was the outcome of a gathering held in Hotel Haileybury on Saturday night last, by local and district graduates of the University. It had been expected that the president of the University, Sir Robert Falconer, would be present, but he was unable to attend. Professor Haultain, of the mining engineering branch of the Faculty of Applied Science, was the chief speaker at the meeting, which followed a banquet in the hotel, at which sixty guests were present. Other speakers included Balmer Neilly, president of the Alumni Federation, and Mr. Conn, secretary, Robert Bryce, mining engineer, of Toronto, and Chas. Williams, mining engineer, of Timmins. There was a splendid time spent by all those who were present and all are enthusiastic over the prospects of the newly-formed branch.

Following the banquet and interspersed with the addresses, there was a musical programme, which included a pleasing vocal solo by Mrs. A. P. Knechtel and a piano solo by Mr. R. H. Unwin. Orchestra music was provided and the evening wound up with a dance which was enjoyed by all. Mr. W. O'Flynn, of Cobalt, was chairman and toastmaster for the evening.

The officers of the new Temiskaming Branch of the Federation are:

President—Wm. O'Flynn, Cobalt.
Vice-presidents—Dr. W. C. Arnold, Haileybury; Homer Sutcliffe, New Liskeard; Dr. H. H. Abell, Cobalt; Dr. Jackson, Englehart; Dr. Crann, Gowanda.
Secretary-Treasurer—Douglas A. Mutch, Haileybury.
Executive—Mrs. E. W. Kearney, Haileybury; Miss Grey, New Liskeard; Dr. (Mrs.) Stark, Cobalt.

MAYOR WEEKS HAD THE PULL AND THE MINISTERS PUSHED

The following is given as it appeared in a recent issue of The Toronto Star Weekly:—

"Harry Weeks, mayor of Englehart, a Northern Ontario metropolis and government road inspector for the district, is one of the few government employees who is not frightened or intimidated by cabinet ministers. In fact he has often "joshed" them on occasions.

"Before the present government came into power he was taking a party of government ministers over the northern highways. Prior to the visit he had been receiving several curt commands from these same men at Queen's Park. These were still fresh in his mind so he picked out a particularly dangerous looking piece of road, which he knew to be safe, and when the wheels began to sink into the mire allowed the motor of the car to chug out.

"What's the trouble?" one minister, who appeared to be the premier, asked.

"I'm afraid you'll have to get out and shove, I'm sorry," Mr. Weeks explained.

"Then when the three ministers were shoving the car with all their might he shouted back to them "The cabinet gives me orders all year, this is once where the cabinet is going to work for me," and they did work for him, all the way up the next hill.

"Billy" Weeks, as that is what he is called everywhere, does his work exceptionally well. He knows northern roads and how the climate treats them and his experience proves a great asset every spring when the frost begins to come out of the roads. He works long hours and deserves everything that is given to him by the government.

"He has proved conclusively that a young Englishman can make a success in Canada if willing to work. Weeks was married on the day he landed sixteen years ago. He and his wife, greenhorns, picked the north as their Eldorado and by hard work have been successful.

"The first winter in the north was almost their last. Their farm stock died, it was forty below, and the only work he could get was a lumber camp cook, getting up at four in the morning and working until dark at night.

"But he stuck to it. Conditions improved year by year until he secured a government position. It was still hard work, but a big advancement. He has won money from the north but it has taken it back. Some day he expects to strike it rich and that day is not far distant if his gold claims in the hills near his home are as good as he thinks they are. No matter what happens he is staying in Northern Ontario "There is no country like it," he says."

Hull (Que.), Progress:—Every day aviation is going ahead in Canada. Not long ago, a visitor told us that we were far behind Europe in this respect. This is only natural, since we have only just started. But we can very easily catch up the ground lost, as we have already done in other spheres.

On hot, sultry days!

Then is the time for a sparkling, refreshing, cooling glass of Eno. It works wonders in a tired body—gives you new life for work or play.

Mr. D. Buchard's Son Meets Death by Electrocutation

The many friends in the Porcupine camp will extend sincere sympathy to Mr. D. Butchard, now of Copper Cliff, but formerly master mechanic at the Dome, in the sad death last week of his son, David Butchard, Jr., who met instant death by electrocution while at work at the International Nickel Co. plant at Copper Cliff. Mr. David Butchard, formerly master mechanic at the Dome, is now master mechanic for the International Nickel Co. About four o'clock last Tuesday, according to the despatches from Sudbury, David Butchard, Jr., who was 21 years of age at the time of death, was working with Harry Moore, another electrician. They were engaged on some of the old transformers, and from what can be learned, they understood that the power had been turned off. Butchard touched a high tension wire and although every effort was made toward resuscitation, the youth did not respond. Two physicians from Copper Cliff, Dr. Harris and Dr. Feldhans, for three hours endeavoured to revive life without avail. The company's first aid crews from Creighton Mine and Copper Cliff smelter were also rushed to the scene.

According to other particulars from Sudbury, the late D. Butchard, Jr., came to Canada with his father, who is one of the most highly esteemed officials of the Cliff, from Dundee, Scotland. Mr. Butchard, Sr., having been on a visit to the Old Land. The young man entered the employ of the International Nickel Co. in the electrical department, and among fellow employees was deservedly popular. He was well known among the younger set at the Copper Cliff Club, and news of his tragic death has occasioned deep sympathy. Deceased is only survived by his father and a brother, Douglas, in Scotland, his mother having predeceased him many years ago.

New York Evening Post:—Mussolini has now announced a "new vigorous policy," and we can't help but wonder how he'd characterize the old one.
