It's Like Summer-

A Glorious Place to Spend the Winter

In sunny California you will find wonderful places to spend a month or two this winter. It is a land of unequalled climate, of high mountains, of colourful deserts and fascinating cities.

Sumptous hotels at the many resort centres along the Pacific Coast will make your stay a pleasant one.

Many visitors to California plan their itinerary via the North Pacific charater of Vancouver and Victoria-Canada's famous far western cities, make the journey enjoyable and interesting.

attributable to a general advance in the prices of furs. This total comprises the value of the pelts of furbearing animals taken by trappers and of those raised on fur farms, the steady advance of the fur-farming industry in accounting for a greater proportion of the annual production being noticeable. From about 31 per cent. in 1920-21, the pelts of animals raised on Figures recently given out in regard fur farms accounted for 5 per cent. of to the fur industry in Canada will be the year's production in 1925-26 and Ontario is the leading province of

ed in this North. In the following for a value of \$3,919,491, or 21 per cent. facts and figures the data is for last of the total. Quebec and the Northwest Territories followed closely, the former with \$3,065,323 and the latter The production of raw furs continues \$2,981,829, each being about 16 per cent of the total. Alberta with a value of \$2,256,353 accounted for 12 per cent of all production value. British Columbia's value was \$1,798,026, Saskatchewan's \$1,621.436, and Manitoba's \$1,-618,368, each of these representing about 9 per cent . of the total production. Prince Edward Island with \$480, 342, New Brunswick with \$428,667, the Yukon Territory with \$382,261, and Nova Scotia with \$312,030, each accounted for approximately 2 per cent of the total. All the provinces showed increases in total values over the previous seasons with the exception of Manitoba, which registered a decrease.

The total number of pelts of all kinds marketed in the year was 4.289, 233 as compared with 3,686,148 in the previous year, the increase in the total being due to an addition of 807.283 in the number of rabbit pelts and of pised have taken on new values and 60,654 in the number of squirrel pelts. In Prince Edward Island, Nova Scotia and New Brunswick, where fox farming is a leading industry, silver fox leads in order of value of raw fur production. In Quebec and British Columbia the beaver is first; in Ontario and the Prairie Provinces the muskrat leads; and in the Northwest Territories the white fox is the principal fur bearer; while in the Yukon Territory the lynx is supreme. Muskrat accounted for the greatest number of pelts with a total of 1,774,954, followed by rabbit 1,234,850, and ermine (weasel) with 493,146 and beaver 100,364 occupying third and fourth places respectively.

Muskrat similarly accounted for the greatest revenue, returning a total of \$3,341,446, the average pelt being worth \$1.88. Beaver occupied second place with a total of \$2,292,871, the average price being \$22.85, followed closely by white fox in third place with \$2,237,076 with an average pelt value of \$43.64. Other high revenue producers were silver fox \$1,674,3442; red fox \$1,511,891;

mink \$1,426,817; covote or prairie wolf \$1,113,453; marten or sable \$1,046,819; and lynx \$906,477. The pelts to bring the highest individual value in the year were silver fox \$91.01; blue fox \$64.53; fisher \$51.32; cross fox \$45.58; white fox \$43,64; and lynx \$32.58.

The survey would indicate that the fur industry is maintaining its position as a source of substantial Canadian revenue and continues to be found profitable by its followers. The der review was greater than in any since 1919-20, one of abnormally high prices, which cannot be regarded as representative, this despite the steady penetration of agriculture and the development of othe rfrontier industries which are irrevocably encroaching on the wilds. In the increasing demand for furs, pelts of animals formerly desare coming to swell the country's evenue from this source and widen aliases, while the pelt of the prolific case only one series of photographs i mercial value, is being traded in ex- | diately beneath the plane. tensively. In particular, the fur farwild supply of furs.

AERIAL SURVEYS MADE OF LARGE AREAS IN CANADA

1928 Flying Operations About Completed. Fifty-three Thousand Square Miles Photographed

Civil flying operations are rapidly increasing in Canada, year by year, and one of the fields in which the most marked advance has been made is that of aerial surveying. The preliminary report for 1928 of the aerial photographic work for survey purposes done by the Topographical Survey, Department of the Interior, in co-operation with the Royal Canadian Air Force, shows in round numbers a total of 53,000 square miles of territory covered. Of this, 22,000 square miles was by vertical photography and 31. 000 by oblique.

The operations extended into eight of the nine provinces of Canada for such various purposes as geological mapping, water-power investigation, determination of pulpwood and lumber value of production in the season un- resources, the preparation of topographical maps, and experimental work. The demand for mapping is very urgent and, for areas beyond the limits of present settlement, the oblique aerial photograph fits in well with present needs when maps on the scale of four or more miles to an inch are required When greater detail and a larger scale in the resulting map sheets are necessary the vertical method is employed. Of oblique photographs three series are taken on each flight of the aero the scope of the trapper's activities. plane-one straight ahead and one or Muskrat, once very insignifanctly re- each side-thus covering a very much garded, is now in general demand and greater area per flight than if the verpasses through the trade under many tical method were used.
