**ADDRESS ON BIRD LIFE
 DELIGHTS LARGE CROWD**

Illustrated Lecture Friday Night Under Auspices of Home and School Association Proved Helpful and Inspiring

The May meeting of the Timmins Home and School Association was held in the United Church on Friday evening and the programme provided was one that delighted all. Mr. Wightman, principal of the Central public school, acted as chairman, presiding in very pleasing way at the event.

The programme opened with a piano selection by Miss Margaret Geils, this number being greatly appreciated on its merits, as was also the next number, a piano selection effectively given by Master Allan Longmore.

Mr. Wightman then introduced the speaker of the evening, Miss Marsh, of Peasemash Farm, Grey County, the noted authority and enthusiast on bird life.

Miss Marsh, in introducing her subject "Bird Life," complimented Timmins on having a Home and School Association, which organization could be of so much assistance in creating a better understanding between parents and teachers, and she also congratulated the Home and School Association on their interest in bird life as it has an uplifting influence on children.

Miss Marsh went on to show how important the protection and conservation of bird life are to the country, as the birds are of great assistance in keeping down insect pests as well as destroying weed seeds. These points are illustrated by interesting stories told in very effective way.

Some of the fifty slides Miss Marsh used to describe her "Bird Life" talk were from photographs and sketches made at Peasemash Farm, and some were loaned from the Ottawa museum. The slides took the audience for a journey among the birds, showing some of the important "nest boxes," and many of the beautiful song birds and water birds that go to Peasemash Sanctuary, and some of the very pretty ones of sea birds, these latter being the ones loaned by the Ottawa Museum.

Special points to remember from Miss Marsh's talk may be summarized as follows:—

The importance of children knowing the difference between the English sparrow and the Canadian sparrow. Miss Marsh explained that the English sparrow is an objectionable bird because it drives away other small birds, particularly the swallows, and devours a great deal of wheat.

The danger of increase in blackbirds was another point stressed by Miss Marsh who showed that such an increase would have disastrous effect on the small birds generally, blackbirds robbing the nests of smaller birds of both eggs and young.

A new device of the combination of whistle (which gives the crow call) and stuffed owl may be used in fighting the crows. They hear the call and thinking it is the cry of their young ones they gather round their nests and may be brought down with the gun.

Miss Marsh thinks it wise to have children develop a belief in fairies, as this rouses their imagination and gives them a quiet listening attitude which is necessary in learning to know the birds.

Miss Marsh hopes the day is not far distant when there will be a line of bird sanctuaries all through the North to protect and feed the small birds in their migrations.

Lastly, Miss Marsh advised the children to take a greater interest in birds and encourage them by feeding them. If cats are around, the food may be scattered on some high place where the cats will not have easy access to the birds.

A hearty vote of thanks was tendered Miss Marsh for her interesting and helpful lecture. Mr. Boyce, assistant principal at the Central school, moving the resolution on behalf of the Home and School Association, and the audience giving very hearty approval.

Miss Marsh not only knows her subject thoroughly, but she has the happy faculty of making it most interesting. She is a very effective speaker, having a fine voice and an excellent delivery.

The attendance was splendid, considering that the executive did not definitely know the date until Tuesday, just three days previous to the address. In view of the inclement weather the large attendance was all the more noteworthy. There was a goodly proportion of children present and they gave the speaker the closest attention and the most considerate of order. A neat sum above expenses was realized for the Home and School Association. Many thanks are due Rev. J. D. Parks for allowing the use of the United Church which added largely to the success of the event.

**NEW REGULATIONS FOR
 DOMINION MINE CLAIMS**

Work Actually Done to Count Efficiency of Man the Basis of Ruling in Regard to Assessment Work on Dominion Lands

Development work on mining claims in Dominion lands will be measured in future by the amount of work actually done rather than the time spent in doing it or the money paid out, says The Ottawa Journal Tuesday evening. This was made clear in a statement last night by the Department of the Interior.

Under the old regulations governing quartz mining, \$100 in development work had to be expended on a mineral claim each year and a total expenditure of \$500 to entitle the recorded owner to a final lease. Last January an Order-in-Council was passed changing this requirement to not less than 40 days' work of eight hours each on the claim each year and 200 days' work in all to admit of a final lease being granted.

"As a licensee may stake out an acre each year," says the statement, "in any mining division three mineral claims for himself and three claims for each of two other licensees, and in the Northwest Territories double that number, complaint has been made that the prospector of limited means might be unable to do or cause to be done, the number of days' work each year on the number of claims which the regulations permit him to acquire particularly in the Northwest Territories."

The statement adds:

"In order to compute with fair accuracy the results which might reasonably be accomplished during the prescribed number of days' work each year, a schedule of representation has been prepared under the present regulations, indicating the kind and quantity of development work which may be accepted as equivalent to 40 days' work of eight hours each, dependent in each case on the distance of the claim from transportation facilities by operating railway."

"This schedule is based upon the efficiency of the operator rather than upon the number of days actual work, and is dependent upon the results accomplished rather than upon the time consumed, and as nine adjoining claims may be grouped for operation, the prescribed development work, in the large majority of cases, may, by vigorous application, be performed in a much less period of time than that required by the regulations."

**VERY ENJOYABLE EVENING
 AT THE LANCASHIRE CLUB**

A very enjoyable evening was had cashire Social Club held last Thursday, in the Hollinger Recreation hall, by all present at the social of the Lancashire Club.

A general meeting of the club was held first and it was decided to hold an open dance on Thursday, May 16th, and also a picnic this summer.

After the meeting a sixteen hand whist drive was held, and the winners were: Mrs. W. Rigg, 1st; Mrs. Houle, 2nd, and Mrs. Tomlinson, 3rd. There were three ladies a tie for first and Mrs. Rigg won in cutting the cards. The gentlemen winners were: Mr. Rowe, 1st; Mr. Beck, 2nd and Mr. S. Whittam, 3rd. After the whist a dainty lunch was served. The rest of the evening was spent in dancing, vocal and instrumental music and classic dancing. The artists contributing to these were: Miss L. Lainsbury, who danced the Highland Fling and Sailors' Hornpipe; Miss Lowther, a vocal solo; and Miss A. Jopson, a pianoforte solo. All these numbers were very well rendered. The music for the dancing was given by W. A. Devine.

**Extensive Development is
 Planned for Hayden**

Following an extensive diamond drilling campaign and a recently completed radiore survey, officials of Hayden Gold mines are preparing for extensive underground work from the lower levels of the present two-compartment shaft. To carry out this work an electrically operated mining plant will be installed. This has been already ordered and includes a 1,000 cubic-foot compressor.

Arrangements are being made to secure a supply of electric power from the Northern Ontario Power Co., whose main power transmission line to Timmins runs within a mile of Hayden mine. The old log power house has been torn down and a new power house of modern tile construction is in the course of erection.

James S. Pierce, president of the company, states the present plans of the company are to crosscut from the 700-foot level to open up the extensive vein system proven by diamond drilling and the electrical survey.

The electrical survey completed recently by the Radiore Co. of Canada covered about one-sixth of the Hayden property. The survey indicated that the vein already proved in drilling and also six other indicators were all of considerable length and in most cases were still continuing beyond the area covered by the survey. The veins dip to the north so that the property is well protected on the dip of the veins.

The original Hayden property consisted of eight claims. During the past year eight additional claims have been secured, so that the property is now about running lengthwise about the centre and south of the centre of the property.

**FOUR MONTHS' OUTPUT AT
 DOME GAINS 12 PER CENT.**

Production at Dome mines for the first four months of 1929 amounted to \$1,389,050, an increase of nearly 12 per cent. over the figure for the corresponding period of last year, and of three per cent. over two years ago. In the month of April output was valued at \$353,354, as compared with \$361,767 for the previous month, \$275,941 in April, 1928, and \$315,351 in April, 1927. Last month's production has been exceeded only four times in the past three years.

Mrs. Alfred Gibson, of Matheson, Ont., is visiting her daughter, Mrs. A. Jenkins, of Timmins.

Mr. Jas. Reid, of the A. E. Moysey & Co., staff, left last week for a two months' holiday in the Old Country.

**Seeking Reduction in
 Freight on Pulpwood**

The Northern Tribune of Kapuskasing last week had the following editorial reference:—

"Quick action has resulted from the advocacy by the Kapuskasing Board of Trade of a reduction in the freight rate on poplar pulpwood from New Ontario to industrial centres where there is use and demand for it. With creditable promptitude the local C.N.R. agent got in touch with the traffic officials, and one of these gentlemen has already been on the spot to investigate the situation and report. The reduction asked for would be a sensible move on the part of the railway and would be a real help to many settlers. It traces back to the problem of clearing land on a cost basis that gives the settler a chance. There is much poplar in the North, but it has not been very highly regarded. The pulp and paper mills don't want it; it is considered inferior firewood; and it rushes into growth and chokes out more valuable woods whenever a denuded area gets a chance to grow timber again. But what is the settler to do who finds it standing in the path of his axe? If he leaves it standing he can't get his land cleared, nor will the young spruce have a decent chance if he wants to leave his cutting area forested. If he cuts it down there is a poor sale for it, and why should he use it for his own fuel when there is much better available? It would be worse than a farmer selling all his cream and keeping skimmed milk for the family use.

"Our own idea about the way things are is that a lot of poplar is impatiently topple over and left lying where it drops, and that when it dries out and deadens there an additional fire hazard is created. It lags superfluous on the scene; the settler doesn't want to be bothered handling it.

"But if a more lucrative market can be found for it, the condition is much changed. The settler is encouraged to clear his land after cutting off the pulpwood and bring it under cultivation, and he gets more revenue for his woodlot labour. So next to paying a bonus for clearing land, as the province of Quebec is doing, the Ontario government might do well to make every effort to create a better market for New Ontario's poplar."
