**From Mother of Six**

"I think Lydia E. Pinkham's Vegetable Compound is wonderful! I have had six children of which four are living and my youngest is a bonnie baby boy now eight months old who weighs 23 pounds. I have taken your medicine before each of them was born and have certainly received great benefit from it. I urge my friends to take it as I am sure they will receive the same help I did."  
—Mrs. Milton McMullen, Vanessa, Ontario.

**HOW COMFORTS DEPEND UPON MINING INDUSTRY**

Without Mining Electric Lighting, House Heating, Sanitation, Refrigeration, Etc., Not Possible.

After dinner orators often refer to mining as one of the basic industries, but it is doubtful if people in general realize how vital mining is to modern living conditions. Think of any comfort or convenience in modern life today and it will be found to depend directly or indirectly upon mining. Some one may suggest, for instance, that it is another basic industry of the North Land—lumbering—for which the world is indebted for habitations. The reply to this is to mention the fact that the saws with which the lumber is cut and the nails that bind it in place, both depend upon the mining industry for existence. Clothing? Well, how could clothing be cut and sewn on modern lines without the mining industry? And all colours would need to be practically abandoned along with the mining industry. Mr. Ross H. Mowat deals effectively in a recent article with the basic nature of the mining industry. Mr. Mowat says:—

"Do we realize, in the enjoyment of the comforts and luxuries of our modern homes, the part that mining plays in contributing to these necessities and luxuries?"

"It has been stated that we live in an electrically mechanized age. True, but without the prior development of the science of mining and metallurgy, the application of electricity in its varied and multitudinous ways would not be possible.

"Consider first the illumination of our homes. Without the mining of copper and the utilization of copper alloys such as brass, we would be back in the days of kerosene lamps or tallow candles. The pleasing soft glow of the home, or the brilliant lighting effect of the ballroom are achieved through the transmission of electricity by copper wire.

"What of the heating of the home? Whether heated by electricity, oil furnace, or coal, mining forms the basis of such artificial heat. The importance in the national life of coal mining speaks for itself; and, as in the application of electricity, the development of the oil furnace necessitates the use of copper and other metals, all having their origin in the bowels of mother earth.

"What of sanitation and refrigeration? Plumbing employs lead, zinc, and other base metals, and in electrical refrigeration we again utilize the necessary copper metal and its alloys.

"The very paint on the house possesses ingredients derived from the mine, in one form or another, such as lead. Fire hazard in the home is protected by asbestos insulation, another product of the mine. In cooking we utilize aluminum utensils and our cooking stoves are nickel-plated, both products of the mine.

"Our beautiful silverware and brassware adorning the table have a metallic origin, and so it is with our radios, our vacuum cleaners and other labour-saving devices. In every direction modern civilization utilizes to the full the products of the mine. Mining, then, is a basic industry, serving our necessities, our luxuries, and even determining the basis of our buying power through our gold currency."

**WEEKLY NEWSPAPERMEN TO MEET AT LONDON, ONT.**

The annual convention of the Canadian Weekly Newspaper's Association is to be held at London, Ont., on July 4th and 5th. Weekly publishers from every province in the Dominion will foregather for the purpose of renewing friendships and discussing business methods.

Since 1859 there has been an association of weekly publishers. The strength of the association has grown with the years, and the improvement in the printing and publishing business has kept up with the advancement in other professions and business, due in part to the activity of the association, and in part to the willingness of its members to progress.

The meeting at London is to be addressed by some outstanding men in the editorial, printing and publishing departments, and as is usual some delightful social events for the delegates is being provided. The newspapers association conventions have been held in Vancouver, Toronto, Edmonton, Winnipeg, Ottawa, Halifax, Bigwin Inn, with attendances around three hundred. In 1921 the members toured the west in a special train; the east in 1923, while 170 of the association toured the British Isles and the continent in 1924. The Porcupine Advance is a member of the Canadian Weekly Newspapers Association.

The presiding officer for the coming convention is Mr. H. B. Anslow of The Graphic, Campbellton, (N.B.)

Toronto Mail and Empire:—There is an old story to the effect that a hotel run on the American plan placarded its dining-room with notices to the effect that in order to prevent fruit being carried from the table no fruit would be put on the table. This comes to mind when pondering the excuse of the library board for not opening branches on Sunday. It explains that if it opened one it would have to open all in fairness to the public. So in fairness to the public it will not open any.

**Increasing Importance of the Mining Industry**

In an editorial article last week The Toronto Mail and Empire discusses the growth of the importance of the mining and metallurgical industries, as follows:—

"Upon the fact that the mining and metallurgical industries are yearly gaining in importance in the industrial life of Canada, Mr. Charles Cammell, deputy minister of mines of the dominion, comments in his introduction to the latest annual report of his department. It has been said, he notes that mining may soon rank as the second of Canada's primary industries, and, he adds, a study of the fields over which it is so rapidly expanding makes the realization of this prophecy appear not altogether impossible. "Mining operations," he asserts, "are now a matter of vital concern to three Canadian provinces, of prime importance to two others, and are becoming of increasing importance to the remaining three large provinces."

"Of the increasing importance of the mining and metallurgical industries in the industrial life of Ontario, the report just issued, upon the value of the mineral output of the province in the first quarter of 1929 is evidence. The value of that production in the period reached \$19,780,780, an increase of nearly 25 per cent. over the output of the corresponding quarter of last year. The value of the gold mined in the province in the three months of 1929 showed a slight decrease when compared with that of the gold mined in the same months last year. While that was so, the value of the output of silver and of copper and nickel in the first quarter of 1929 was more than double the value of the output of the same metals in the like period of 1928.

Mr. Cammell notes in his report that in 1927 Ontario led all the provinces in mineral production, with British Columbia second, Nova Scotia and Alberta almost equal, Quebec fifth with a rapidly-increasing production, and Manitoba, New Brunswick, the Yukon and Saskatchewan following in the order given. He mentions that developments in Quebec and more recently in western Manitoba and in Saskatchewan have thrown a new light on the mineral resources of these provinces. The developments to which he alludes have directed attention to the extent to which the mineral-bearing geological formation known as the pre-Cambrian shield covers northern Canada. The result has been a great increase in activity in the search for minerals in that great territory in the past few years.

**GOVERNMENT TO MAINTAIN MAIN STREET OF COBALT**

Announcement was made last week by Mayor Sullivan of Cobalt that the Provincial Government would maintain the main street of the town as an incorporated part of the Ferguson highway. The announcement was made at the regular meeting of the town council of Cobalt, and Mayor Sullivan, dealing with a visit paid to Premier Ferguson by himself and Councillor Boughton, said the premier had told C. H. Fullerton, Deputy Minister of Northern Development, to take over the street as a special grant to the town of Cobalt, and that A. J. Kennedy, M.L.A. for Temiskaming, who accompanied them, was warned this action was not to be regarded by other towns as a precedent.

Although the Mayor said the town no longer had any financial interest in the suggested bridging of the Lang street crossing, now that the streets were taken over, he declared a conference would be held at Cobalt at an early date with regard to this crossing. At this meeting, the Northern Development Branch and the T. & N. O., through Mr. Fullerton and George W. Lee, respectively, had announced they would be represented and the mayor was appointed by council to appear for Cobalt at the discussion.

"Mr. Cammell points out that vast areas that have been hitherto entirely unexplored or which have been only hurriedly prospected have been made more readily accessible by airplane. The search for minerals, he says, is to-day contributing more than any other agency to the exploration of un-mapped territory, and the map of the dominion is being unrolled northward with remarkable rapidity. Enough is now known of the resources of the north, asserts the deputy minister of mines of the dominion, to enable one to foresee the establishment, within a comparatively short space of time, of important mining and metallurgical centres throbbing with life and movement, and contributing materially to the greater economic development of the dominion. Such an assertion from such a source must be gratifying to Canadians who desire to see their country progress and prosper."

Newark Ledger:—"Still, maybe your wife would be as wonderful as that one in the movie if she had a husband as wonderful as that one in the movie."

**Good-bye, Flies and Mosquitoes!**

Unless you're a Flit user, you have no idea how soon you can rid your home of every fly and mosquito. Flit kills quicker, and is easier to use, in the handy Flit sprayer. Spray into cracks and crannies to kill roaches, bed bugs, ants. Flit vapor does not stain. Try the quicker Flit method today!

**So Quaker Flour carries a Money-back Guarantee that it will give Perfect Satisfaction**

The searching tests that Quaker Flour has to pass before it can bear the Quaker name enable us to guarantee it unconditionally. If it does not give you PERFECT SATISFACTION your dealer is authorized to refund your money.

Quaker Flour is milled to act right, to be of the same uniform quality in every sack and to the last pound. Our guarantee is printed on a tag attached to every sack.

Every bushel of wheat is specially selected and severely tested for its milling qualities and its food values.

Every hour in milling Quaker Flour, we make other rigorous, scientific tests to see that it conforms to those exceptional standards which are the result of our fifty years of milling experience.

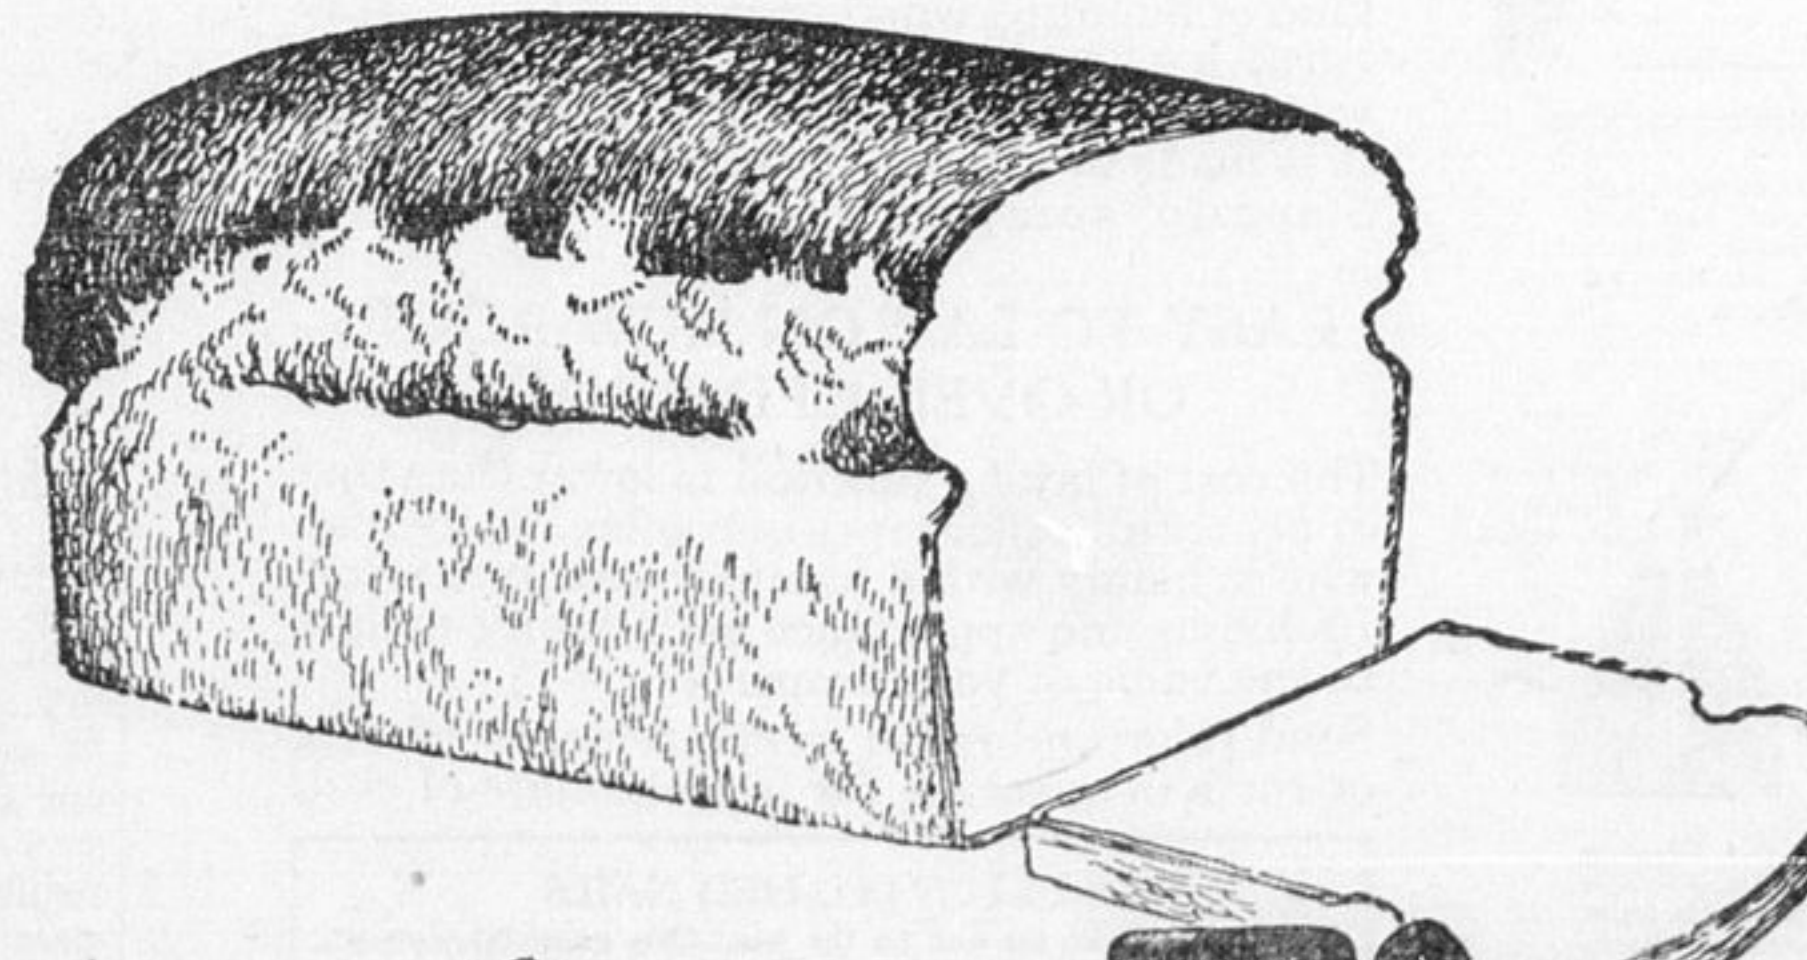

Every day we bake with it in our own kitchens, under actual home baking conditions,

to make sure that it acts right in the oven.

The care and precision in milling Quaker Flour are such that it can creditably carry our famous, unconditional, money-back guarantee. Thousands of Canadian home bakers use it for all classes of baking with perfect success year after year, knowing that their bread, cakes and pies will turn out always just as they hope. Because of its absolute uniformity, Quaker Flour takes all the guesswork and uncertainty out of home baking. It is the perfect household flour for all purposes.

Start to use Quaker Flour to-day, and you, too, will enjoy the thrill and satisfaction of success every time you bake.

Packed in machine-sewn sacks, Quaker Flour is not touched by human hands.
