**Gold Production Leads
Canada's Mining Field**

Production of gold still continues to dominate the mining industry in the Province of Ontario as well as the whole of Canada. Out of a total mineral production in 1928 of \$38,647,000, gold provided the huge total of \$32,626,000. The 1928 production of gold compares with \$33,627,000 in 1927. The output of nickel is steadily climbing and copper comes third. In view of the plant extension and new construction now under way in the Sudbury field, it is not unlikely that nickel-copper will, within two years challenge gold for the leading position. It appears highly probable, however, that the output of gold will continue to increase for years to come.

The nickel mines of Ontario contributed \$21,394,000 in 1928, as against \$15,262,000 in 1927, while output of copper was valued at \$8,745,000. The copper mining industry will come abruptly to the forefront when the huge smelter being constructed by International Nickel Company comes into operation. Nickel output is growing steadily as facilities for production are being increased month by month. While production of silver in Ontario has dwindled year by year from a high record of 31,507,000 ounces in 1911, valued at \$21,200,000, to 7,163,117 ounces in 1928, valued at \$4,117,000, growing output in British Columbia has helped to offset Ontario's decline, with the result that in 1928 Canada has as a whole produced 21,345,000 ounces, valued at \$12,420,000.—The Globe.

**WOMEN IN BUSINESS NOW
AS PULPWOOD OPERATORS**

Women these days are into practically every business and calling from prospecting to mine managing as in this North to all branches of the business and professional world in the south. Women have successfully conducted business as pulpwood operators. Mrs. Kate Bowerman, of Dorion, Ont., is one of the pulpwood operators in the Thunder Bay district and reports that she took out 200 cords of pulpwood last winter. Next winter she expects to take three or four hundred cords. In writing to the Canada Lumberman she speaks in an optimistic vein.

"I am doing fairly well and I like my work fine. I opened the camps about three weeks ago. Cutting and peeling of balsam and spruce is under way. There seems to be quite a demand for balsam and poplar this season. Last season I drove a team of horses and have been doing plowing and seeding during this spring, so you see I have not forgotten the art yet."

"Mrs. MacIntyre, my neighbor, has been very busy taking out pulpwood and is at the present time cutting balsam and spruce. The price of pulpwood has advanced a little; we are now getting \$9.50 per cord.

"Of course, I do not do the cooking as in the past. My sister, Mrs. Smith, is now doing this for me. We are all very busy women up in this northern country. This year my camps are located at Hurkett."

**SECOND HALF OF SOFTBALL
SCHEDULE FOR THE SEASON**

Softball Teams Away to a Good Start for the Second Half of Schedule. Moyses Won the First Half

Last week-end the second half of the schedule for the season's softball was announced, and this second half promises to far eclipse the first half for interest and action, and no one is kicking about the first half. The first half was eventually won by the Moyses team after a play-off battle. Now all is set for the second spasm, with the other teams determined that Moyses will have to travel some to hold the laurels won so far. In fact the opinion is freely expressed that the winners of the second half will not be identical with the winners of the first half and so there will be a grand final battle to decide the ultimate honours and the possession of the trophies and championship.

Be that as it may, here is the second half of the schedule as announced, including games played and yet to play:

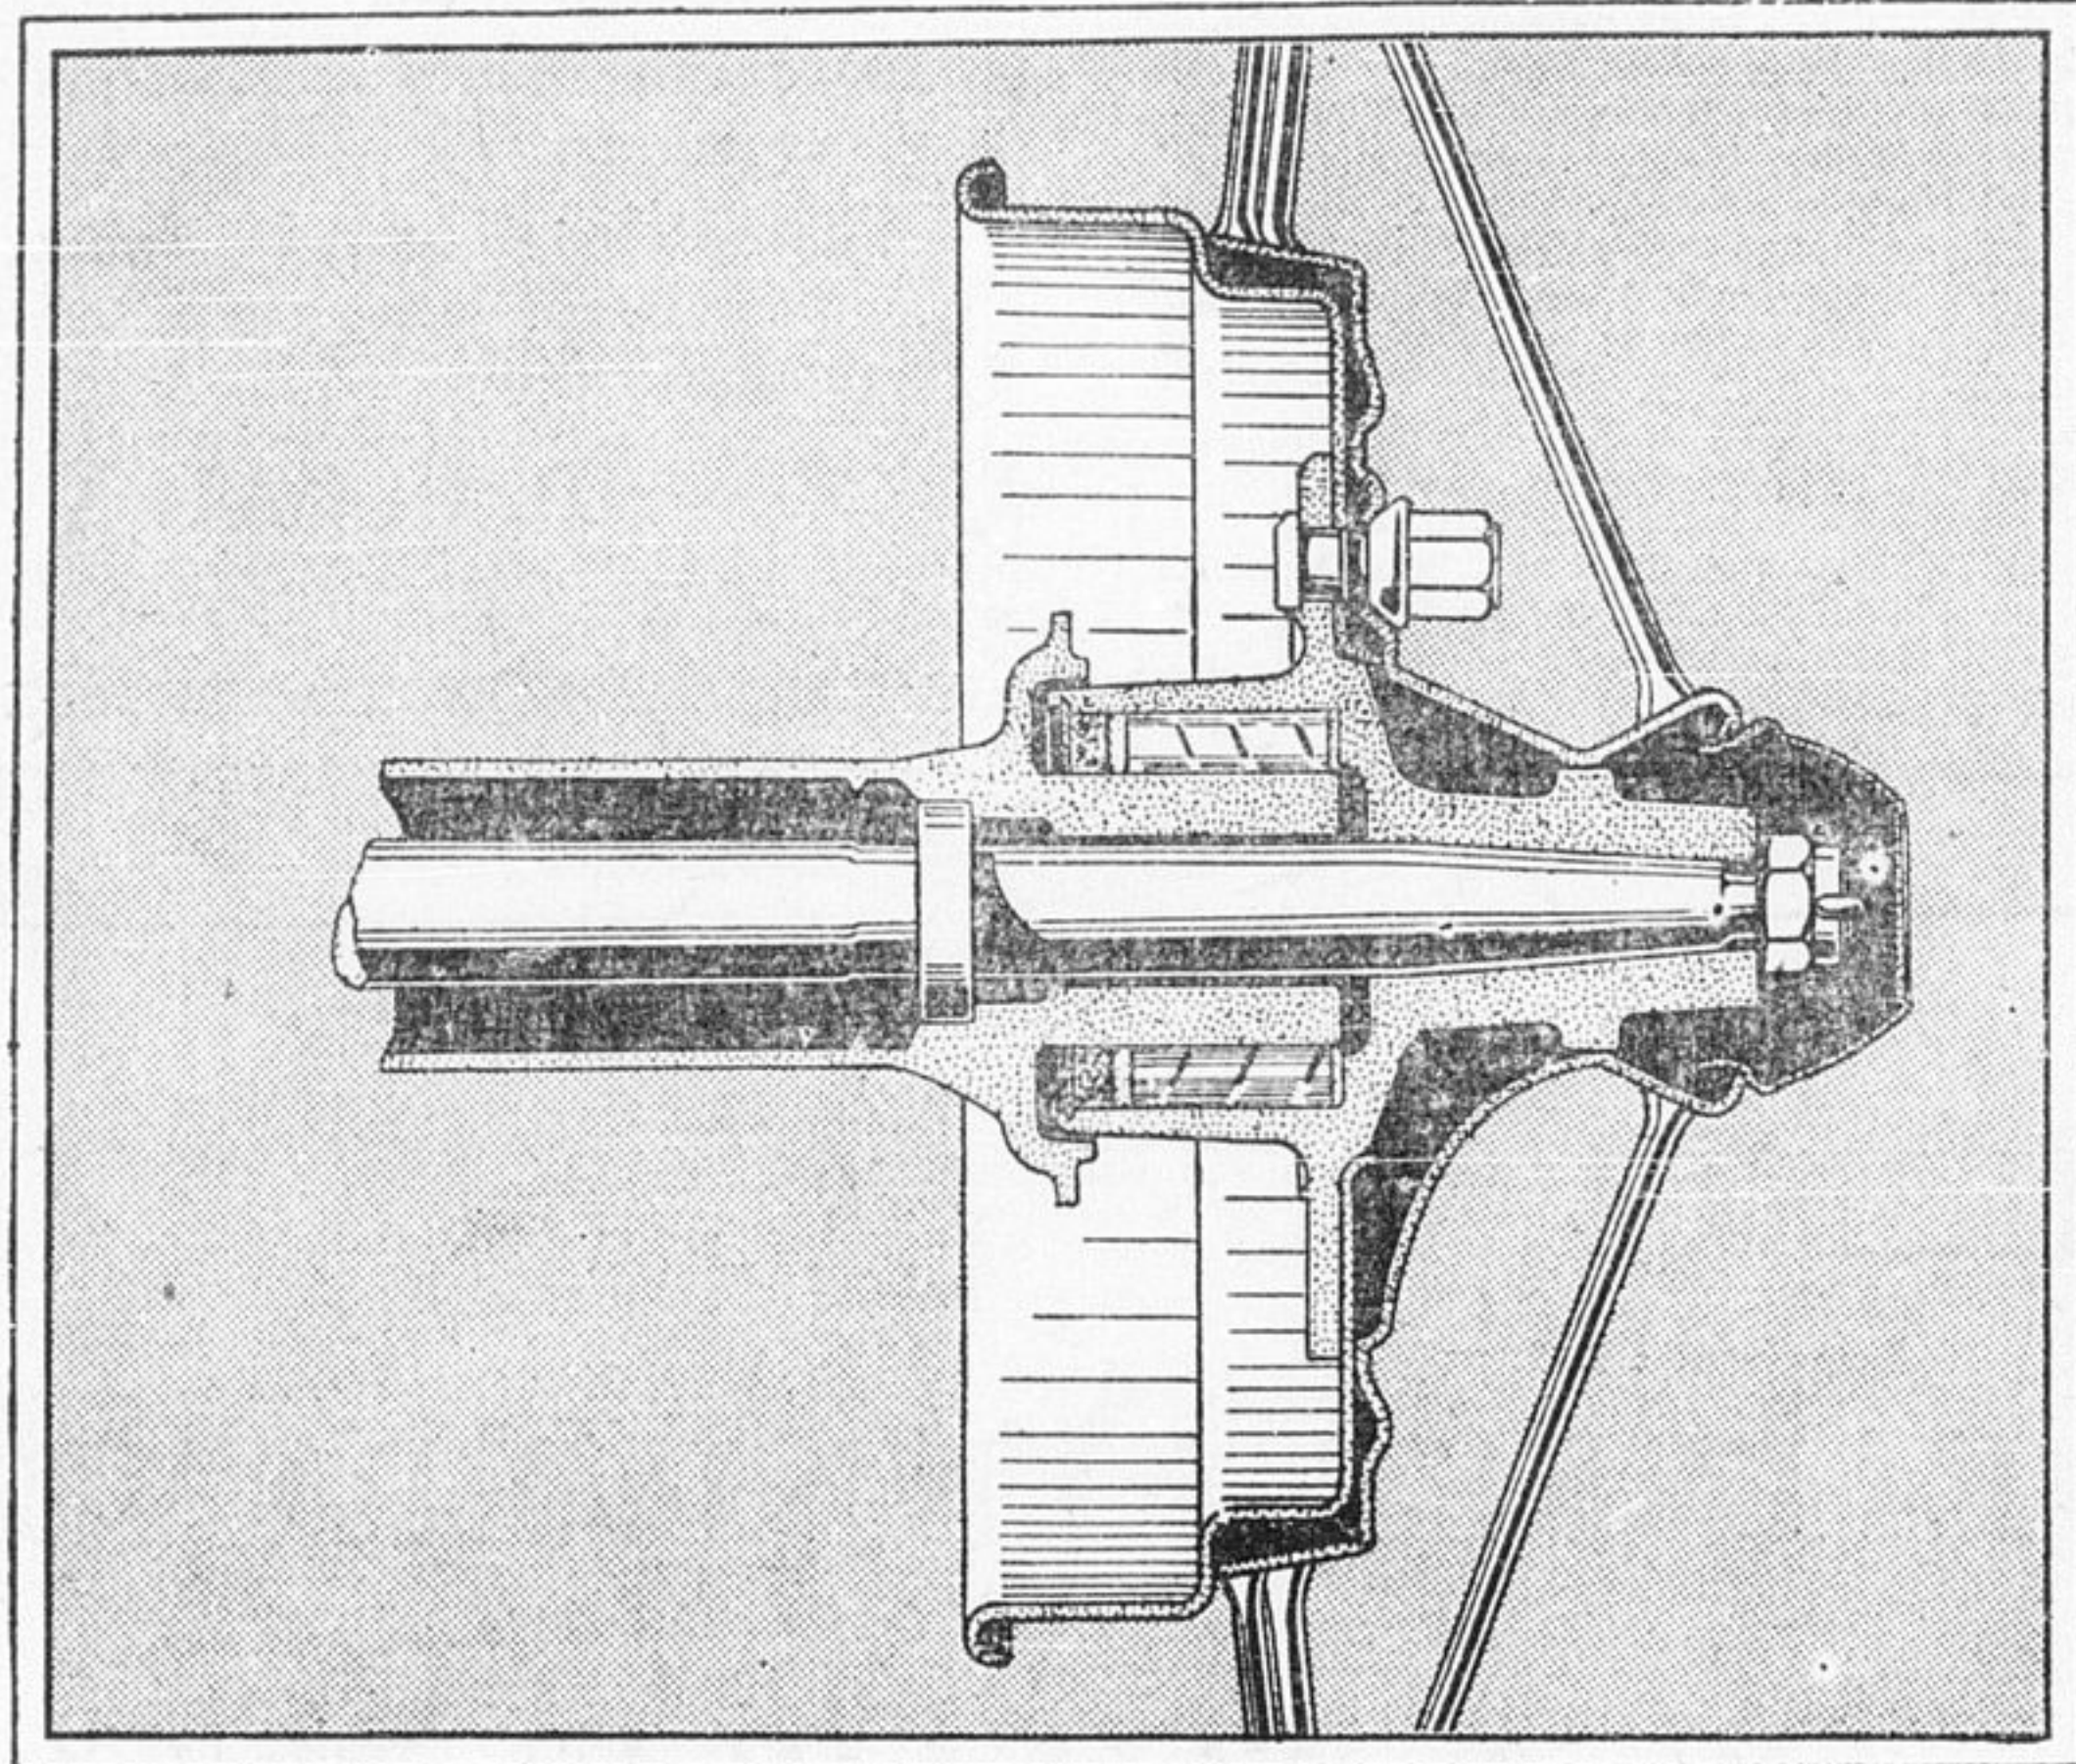

- Monday, July 8th—Monarchs vs Moyses.
- Wednesday, July 10th—Tuxis vs Moyses.
- Friday, July 12th—Moose vs Tuxis.
- Monday, July 15th—Moyseys vs Monarchs.
- Wednesday, July 17th—Monarchs vs Tuxis.
- Friday, July 19th—Moose vs Moyses.
- Monday, July 22nd—Moose vs Monarchs.
- Wednesday, July 24th—Moyseys vs Tuxis.
- Friday, July 26th—Tuxis vs . Moose.
- Monday, July 29th—Moyseys vs Moose.
- Wednesday, July 31st—Tuxis vs Monarchs.
- Friday, August 2nd—Monarchs vs Moyses.

Sudbury Star:—Dr. Pickens, of Cardiff, strongly urges that as a health measure the practice of kissing should be discontinued by everybody. A lot of fellows have succeeded in getting into print by making the same suggestion, but that is about as far as they ever got.

THE FORD CAR REAR AXLE

Expense no object in Achieving Perfection

THE rear axle of the Ford car is of the three-quarter floating type with spiral bevel gear. The pinion hub is exceptionally heavy, and, as the pinion is carried on double taper roller bearings, perfect alignment of the gear is always assured. The rear axle has a total of four roller bearings which add considerably to the cost of manufacture but are a protection for the owner against wear.

Special care is taken to insure silence in the pinion and ring gears. These are made up in sets and carefully matched, each set being run in to eliminate all possibility of noise in operation.

The differential side gears are forged integral on the rear axle shafts and the teeth then cut. This permits of lighter and more simple construction. The shafts are unusually strong, and, as the centre line of the wheel comes over the bearings, there is no overhang of the axle shaft, and it has no weight to support.

The use of malleable castings is eliminated in this new axle housing which is made entirely of steel. Bell forgings welded to steel tubing make up the shaft housing which is bolted to an all steel differential housing. The care and skill devoted to the manufacture and assembly of rear axle parts is typical of the high standards of Ford engineering.
