

# DEATH WARRANT WAS CANCELLED

Aviator uses Kellogg's ALL-BRAN with beneficial effects

"I didn't 'go west' in France, but came home to Canada carrying my death-warrant, the doctor declared. I weighed exactly 120 pounds—not much for a six-footer. Look at me now! 185, and as hard as nails!"

The speaker (name if requested) was a young Canadian who served overseas with the Royal Flying Corps, and returned in 1918 a mere shadow of a man. His uncle, a prominent doctor, suggested Kellogg's ALL-BRAN. After one month's trial, he felt better. He persevered, and in three months was back at his position, healthy and happy.

The best part of the story is: his health has lasted as only health gained in a natural manner can last. He is still holding his strenuous position as editor of a successful publication.

Kellogg's ALL-BRAN will relieve constipation and the chain of ills that arise from it, permanently and naturally, if eaten regularly. Eat at least two tablespoons daily—in chronic cases at every meal. Only ALL-BRAN can conquer constipation.

Made in London, Canada. For sale at all dealers.

## Teachers' Bowling Scores Week of December 4th

The following are the scores for the Teachers' Bowling for Dec. 4th:—

A. TEAM			
B. Belanger	82	101	183

## Deep Mining Features Canada's Gold Mining

Canada's gold mining industry flourishes as deep mining becomes a feature. The Market Despatch in an article on the present stock market situation. In the course of its discussion The Market Despatch says:—

"A brilliant picture of progress and achievement is presented by Canada's flourishing gold-mining industry, which is contributing very substantially to the Nation's prosperity. Already occupying third position among the gold-producing countries of the world, statistics seem to indicate definitely that it may not be very long before the Dominion climbs into second place, and in doing so it would forge ahead of the United States in this respect. Canada's gold production is increasing, and, judging from the expansion programmes now being carried out by some of the important mining enterprises; the yield of the precious yellow metal from Canadian mines may be expected to register a further notable increase in the years to come.

"Stability is a feature of gold-mining in the North Country. The operating enterprises conduct their businesses on a high plane, and most of the leading companies are exceedingly well established, enjoying sound financial conditions. The large gold ore reserves worth many millions of dollars definitely point to a long period of productivity.

"It is especially significant to observe that such leading gold-mining projects as McIntyre, Hollinger, Teck-Hughes and Lake Shore are committed to deep-mining campaigns. The No. 11 shaft at the McIntyre has been sunk to a depth of around 4,000 feet, this constituting one of the deepest gold-mining operations on the North American Continent. The Kirkland Lake Gold Mining Company, Ltd., although its mine is not as big as those already mentioned, also has completed sinking operations to the 4,000-foot horizon. The persistence in depth of the gold-bearing veins are being proved as these deep-seated stratas are opened and explored.

"Evidence of the continued forward strides being registered by the gold-mining industry in the Dominion is contained in the figures covering the output in Ontario during the first nine months of this year, when the mines of that province yielded 1,196,631 fine ounces valued at \$24,736,562, as compared with 1,146,887 fine ounces, worth \$23,708,312 during the corresponding period in 1928, representing an increase of 49,744 fine ounces worth \$1,088,250, or 4.3%. The percentage of gain is especially striking in the case of the rich Kirkland Lake Gold Area in Northern Ontario.

"Gold-mining, as it is being conducted in Canada today, may be expected to continue to give a good account of itself even though there may be some disturbance in other sections of the business world as a result of the recent drastic declines in securities values on the Stock Exchanges. Any recession in the prices of commodities and increase in the supply of labour which might tend to influence the wage-scale to lower levels would be beneficial to the gold miners. During good times and bad times, gold continues to command its intrinsic value which is approximately \$20 per ounce. Lower operating costs, therefore, mean

## CREOSOTING RAILWAY TIES HELPS CONSERVE FORESTS

With the rapidly diminishing supply of the timber, and the advent of heavier power with the consequent heavier wheel loads, railways found that forest conservation and economy in railway operation were the most important results of the use of creosoted cross ties, declared G. P. MacLaren, A.M.E.I., general tie and timber agent of the Canadian National Railways in his address "Railway Cross Ties—Treated and Untreated," before members of the Engineering Institute of Canada at Montreal recently.

He said that twenty years ago the maximum tie renewals on American railway lines yearly was nearly 400 per mile. Comparing this with the annual renewals on the Lehigh in 1927, a total of 93 ties a mile, was his method of illustrating what wood preservation was doing toward forest conservation.

"There are two methods of making ties," he continued, "with the axe by hand, and by sawmills. Today about 60 per cent of our ties are sawn and about 40 per cent axe made. Less than ten years ago the proportions were reversed, and in another ten years from now I venture the opinion that there will be no such thing as an axe-made tie."

Untreated, jackpine tie would last from five to eight years, he showed; while, when it was treated, it could be used from 15 to 20 years. Creosoting made possible the use of such wood as beech, yellow birch and hard maple, hitherto impracticable. "In the treatment of our ties A.R.E.A. grade No. 1, creosote oil is used, together with coal-tar in the east, and at Edmonton and Sioux Lookout creosote oil and petroleum oil are used; the proportions being the same in both cases, 70 per cent creosote oil and 30 per cent coal-tar or petroleum in solution."

In describing the process used by the Canadian National Railways in preserving ties Mr. MacLaren declared that while hundreds of patents had been issued in the United States and in Europe for different designs of substitute ties, none of them had proven satisfactory. Creosote oil and coal-tar mixtures gave the best results. He stated that the American Wood Preservers' Association worked in conjunction with the tie committee of the American Railway Engineering Association, and that both of these bodies were doing a great work towards improved methods of treating and prolonging the life of timber and thereby conserving the forests.

Higher profits for the gold producers, the price of whose product does not fluctuate.

"From an investment viewpoint, representative gold-mining securities are procurable to-day at more attractive levels than was the case some time ago."

Huntingdon Gleaner:—The authorities of Havana, Cuba, have just made it illegal for taxi cabs to be equipped with rearview mirrors. Complaints were made by women that the mirrors were used "for impudent eyeing," so the city council decided the best way to cure that would be to abolish the mirrors, that being a more practical way than trying to alter the mental outlook of the taxi drivers.

## How to make...

### FIG LOAF

1/4-cup butter 1 teaspoon baking powder  
1 cup granulated sugar 1 teaspoon vanilla extract  
1/2-cup sweet milk 3 eggs (whites) Figs  
2 cups Five Roses flour (sifted)

BEAT butter to a cream. Gradually beat in sugar, then alternately milk and sifted Five Roses flour with baking powder. Flavor with vanilla extract and beat in whites of 3 eggs beaten stiff. Have ready about 1/2-pound table figs, cut in two or three pieces, and drop these pieces in batter here and there as it is being poured into buttered pan. Bake in moderate oven, and ice when it becomes cold.

### FIVE ROSES FLOUR

You can obtain a Five Roses Cook Book—140 pages of selected recipes of all kinds—by sending a 30 cent postal order to Dept. 12 Lake of the Woods Milling Company, Limited, Montreal, Quebec.

## JACK MINER CALLS CROW KIDNAPPER AND MURDERER

Shows Why He Advocates the Destruction of This Pest. Makes Answer to the Plea of the Humane Society Folks.

Recently some members of the Humane Societies in Ontario have been finding fault with Jack Miner the noted nature lover for his advocacy of the killing of the crow. Mr. Miner has found it impossible to reply to these complaints individually so he has written what he terms himself a "whole-sale reply." A copy of this reply has been sent to The Advance by his son, Manly Forest Miner, and is given here to readers of this paper:—

To my friends of the Humane Society who have written me in the cities suggesting that I advocate the protection of the crow, will you please allow me to give you this wholesale reply.

Now, first of all, please let me say that I belong to the Humane Society and I really do not want to kill any bird, but how can I act humanely humane and advocate the protection of the worst kidnapping baby murderer of our innocent, helpless song and insectivorous birds have?

I have had pet crows galore and they will do no more good on the farm than a leghorn chicken that will lay \$1 worth of eggs a month, and as for the few grasshoppers the crows eat, let me advise you to keep a flock of turkeys and condense these hoppers into Thanksgiving dinners at 50 cents per pound.

Now I know it would be easier for me to please the public if I left the crow out, but remember, I am not here to please the public but, by the help of God, I am trying to do something for the public, and I know that the crow is continually searching for eggs to feed his young during the spring months, and will feed them not only hundreds of the eggs of helpless birds but will tear the young of other birds to pieces and will eat them.

How can you be acting humanely when you ask me to advocate his protection?

One mourning dove will consume 10,000 weeds seeds in one meal. Those figures are not almanac figures, they are actual count.

If their black cold-blooded murderer can find them he will feed hundreds of such valuable bird eggs and young to his family.

Yes, I agree with you that God made the crow, and He also made the bedbug, but He gave man dominion over them and I have not seen a bedbug for over forty years.

Now, my dear Humane people, we have a man down in Ontario who comes out in the press and says that the same power that made the deer also made the timber wolf. One might also add that the same power that made the sheep also made the sheep dog. You let one sheep dog go unchecked in a township where sheep are grown and how many sheep will your officials have to pay for. You may best believe that you will have more to pay for the first year than you will the second.

Oh, Humane people, let us take God at His word and act humanely, by weeding out the baby killer and cold-blooded cannibals and let the loving and desirable multiply.

Remember He did not give the crow the privilege of even controlling themselves. He left that for us, His children, to do, so let us work together for what is the best for the most people.

JACK MINER  
Kingsville, Ontario.

Toronto Mail and Empire:—There has been a split in the "moderate" or "extremist" wings of the Communist Party in the Sudbury district, with moderates in control. This may or may not have a far-reaching effect on "sovietism" in the North.

## New Kind Motor Markers Province of Ontario

"The Ontario government will issue a new style of markers for use during the coming year on motor vehicles registered in the province. On these markers letter will be used in combination with figures instead of figures alone. The issue of the new license plates will introduce into this province a system of classifying motor vehicles similar to systems that had been adopted by some other licensing authorities, for example, those in Great Britain and in the state of New York. Heretofore, the markers displayed on motor vehicles registered in Ontario have afforded no indication of the part of the province in which the owner of the machine resided. Of course, quantities of licenses and markers have been sent out at the beginning of each license period from the department of highways in Toronto to other cities and towns for sale to vehicle owners there. The numbers of these licenses and markers may have run in series, and that fact may have made it possible, to some extent, for departmental officers or police officials to deduce from the number shown on a motor car the place of residence of its owner. While that was so, the deduction might, perhaps, not always be correct, and the markers gave to the great majority of people in the province no indication of the residence of the owner of the machine on which those markers were displayed.

"In future, the figures on the license plate on a motor vehicle will tell the number of the machine among those registered in a county. The letter or letters on the plate will show the county within which the owner of the vehicle, or rather the holder of the license, lives. Furthermore, there will be on each plate, in addition to the letter or letters, no more than four figures. The change in the licensing system recalls a cartoon that appeared several years ago in an English publication, and the description of the cartoon will suggest a reason for the change in the licensing system. In the picture, a man was shown lying in the dust on a road, gazing at an automobile which had knocked him down which was travelling away from him and which bore a license plate displaying a number of some seven or eight digits. "All I have to do" the prostrate one was saying "is to remember the number of the car."

The introduction of the new licensing system will make it easier than it has been heretofore for persons who have any reason to note and remember the number of a car to do so. The letter or letters on the markers will enable a police constable or another person to know at once the county in which the owner of the vehicle lives. Fewer figures on the plate will make it possible to note the number more quickly than heretofore and with less risk of making a mistake or confusing the figures. In short, the new markers will make identification of a motor vehicle easier in the future than it has been in the past."—Toronto Mail and Empire.

Above is shown the approved 17th Century English Console—Cabinet No. 47. The traditional sturdiness and enduring simplicity of design characteristic of Old English craftsmanship, are beautifully portrayed in this handsome Console. It is surfaced with American walnut. Typical low relief and solid wood carvings embellish the front panels and the two sliding doors. The sturdy turned and fluted legs are solidly cross-braced to insure permanent rigidity. Enclosed back, 44 inches high, 26 1/2 inches wide, 16 1/4 inches deep. This cabinet is furnished with the Stewart-Warner Electro-Dynamic Reproducer built in, and with the Stewart-Warner Screen-Grid chassis as the receiving unit.

You'll want to see and hear this sensational new set, even though you do not plan to buy. Come in and let us demonstrate this latest Stewart-Warner triumph that everybody's talking about. Learn what a wonder it is—in power, selectivity, distance-getting. Dial it and enjoy a thrill as the far-off stations come booming in. Hear its clear, rich voice. Volume without distortion! Realism unmatched!

Don't be content to buy an ordinary radio. Buy this new Champion of the Air—"the set with the PUNCH." Its performance surpasses that of sets priced vastly higher. Stewart-Warner manufacturing advantages permit this remarkable value. We're ready and glad to demonstrate. Come in today.

# C.C.M. SPECIAL

ASK the Boston Bruins, World's Hockey Champions for 1929, what skates they wear.

Ask the Montreal Canadiens, the runners-up, Champions of their own group in the National League.

From Boston to Seattle, from Halifax to Victoria—on both sides of the line—more than 80 per cent. of professional hockey players wear C.C.M. Specials. Amateurs, too. Ask the Port Arthur Seniors, World's Amateur Champions, 1929.

Why? Because C.C.M. blades are of super-steel. C.C.M. Skates have the right "ice-lay." C.C.M. Specials have reinforced tubes.

Sweden produces the world's finest ore. Sheffield produces the world's best steels. The blades of the C.C.M. Special are made by Jessop of Sheffield from Swedish ore to C.C.M. specifications, heat-treated and tempered in the C.C.M. factory by special C.C.M. processes to stand up to professional hockey on hard ice.

C.C.M. Special \$7.50 per pair  
C.C.M. Extra (Velvet) \$5.00  
C.C.M. Extra (Olympia) \$4.00
