D. O'Connor Restakes the Iron Range Near Kenney

Writing last week from Connaught Station a correspondent of The North Bay Nugget says—

D. O'Connor and his men have returned from the final stakings of the iron range east of Kenney station, after staking twenty-seven claims in the townships of Flett and Angus. This is less than forty miles due north of North Bay, and three miles and a half from the T. and N. O. Railway. This iron ore is continuous for over two miles and a half, and a width of from 300 to 800 feet wide; in one place as wide as 1,000 feet.

The ore is a massive magnetite which carries a high percentage of titanium, which makes it a much more valuable ore, as there is a very large demand for titanium alloys. Some years ago this same iron ore body was staked, but at that time iron ores containing titanium were practically worthless. Today they are more valuable, hence the re-staking. Assays have been obtained of the above iron 47.40 metallic iron and 22.30 of titanium. The values of the titanium in this case are high.

These iron claims have no connection with the iron at Temagami. The iron ores of Temagami are a bessemer ore and are the largest deposits of iron in Northern Ontario and reported as such by the late Dr. Miller, provincial geologist in a mines report of 1901. He says in one part that anyone wanting ore would do well to investigate the Temagami iron ores. The late Dr. Barlow reported that some of the rich veins contain as high as 55 per cent metallic iron and that large quantities would run 40 to 45 per cent, and also a specimen that he took showing 42.80 metallic iron, and passed through the magnetic separator produced 65.20 per cent metallic iron, no sulphur, no phosphorus. There are in Temagami four ranges of iron, the north-east arm, the Vermilion range, the Ko-Ko-Ko and the Austin Bay range.

The distance from the railroad is not extreme. They are all on the Northwest arm of Temagami Lake except the Austin Bay range. The iron range commencing at Temagami station is the extreme eastern limit of iron ore and has been the place where a great many people have taken samples as it was more convenient. The spot was very lean in this particular. Had they gone twenty chains further to the west they would have found good iron ore continuous for five miles and a half by government report. It is not necessary for people at North Bay to depend on iron ore other than the Temagami ores, as there is an immense tonnage of ore there, and convenient. The only trouble about it is that it is too close."

MINISTER'S DAUGHTER IN TALKIES

This latest recruit to the British talkies is Miss Kathleen Greenwood, 24-year-old daughter of Rt. Hon. Arthur Greenwood, British Minister of Health. She has already done beginner's duty as one of the mob in a two-language feature, and is now ready to tackle sound and color picture dealing with the Charge of the Light Brigade.

Nearly 50 p.c. Increase in Sun Life Business

It is only four years since, for the first time in the history of life insurance in Canada, a Canadian Company was able to announce over a billion dollars of assurance in force. The event was properly celebrated by the Company in question, Sun Life Assurance Company of Canada, and evoked much gratified comment from public men, financiers and journalists, as well as creating general satisfaction among the Canadian public. It was regarded as a signal achievement in a little more than fifty years of that Company's history.

President Macaulay upon that occasion expressed confidence that the momentum then acquired would carry the Company to even more surprising achievements in the next decade. But it is doubtful if even the President of the Company, himself, who personifies confidence and optimism, could have foreseen that the second billion would be surpassed within four years. Yet this is what has happened. The annual report of the Sun Life Company published to-day shows that the total assurances now in force are close to two and a half billion, or \$2,401,000,000. Some idea of the magnitude of these figures may be gleaned from the fact that they exceed the total net national debt of the Dominion by more than \$100,000,000.

The new paid-for business for the year shows an increase of \$213,200,000, or 48% of an increase over the preceding year. This increase is greater than the total business written in 1925. The actual new paid-for business was \$654,450,000. This is an amazing showing considering the conditions that prevailed during the latter part of 1929, and reveals what a wide and efficient organization has been created by the Sun Life Company, and how thoroughly it enjoys public confidence.

The income of the Company, \$172,850,000 (an increase of over \$28,000,000 over 1928), is \$15,000,000 more than the entire customs revenue of the Dominion in 1928.

The assets of the Company were increased by nearly \$80,000,000. They now stand at \$568,000,000.

The undivided surplus has been increased by \$5,868,000, bringing the total over liabilities, contingency accounts and capital stock to more than \$60,000,000.

In connection with the item of \$69,174,892 paid to policyholders and beneficiaries for death claims, matured endowments, profits, etc., it is interesting to note that not only have payments under this head since organization reached the sum of \$419,674,000, but that this amount, together with the amount at present held for the security or benefit of policyholders exceeds the total amount received from them in premiums by \$139,290,000.

Even more impressive is the statement that the rate of interest earned on the mean invested assets has risen to 7.02%. This figure includes a certain amount from bonuses and stock privileges accruing on some of the Company's holdings, but if these were entirely eliminated the rate would still be 6.60%.

Such a remarkably successful year by our leading life assurance company favourably reflects the sound conditions in general Canadian business.

cooked, is harmless for food and infected rabbits, kept frozen for 30 days, have also been found to be free from infection.

"As a rule," runs the information, "when the infection has come from a rabbit, some injury has been inflicted upon the hand while dressing the rabbit, although a manifest injury is not necessary for infection, accompanied by enlargement of lymph glands, which drain the ulcer. Fever is always present and continues for two or three weeks. One attack confers immunity in a man. Rest in bed is the most important treatment."

"Dr. Godfrey described the infection as a most miserable trouble" and was inclined to anticipate further cases in this province, in view of the fact that the state of Michigan has now a run of the infection. Tick-bite and horse-fly-bite are also sources of infection, according to the Washington public health service. These sources are also being made the subject of study by the Queen's Park laboratories."

IROQUOIS FALLS MAKES ITS POSITION VERY CLEAR

Players, Hockey Commission and People in General Unanimous in Objecting to Porcupine Team Reverting to Intermediate.

The Iroquois Falls Hockey Commission last week made the following letter public in regard to the hockey situation in this part of the North:—

W. A. Tompson, Esq., Secretary, Northern Ontario Hockey Association, North Bay, Ont.

Dear Sir:—In connection with the telephone conversations which we have had during the past three or four days concerning the decision to allow the Porcupine senior team, who have already been eliminated in the senior series, to revert to the intermediate series, and the possibility of that team, if successful in the intermediate series, to again meet our senior team. We consider this to be absolutely without precedent and most unfair.

We understand that the present controversy is based on a clause in the N.O.H.A. constitution, introduced in 1924, by Angus Campbell, that the runners-up in the senior series be allowed to revert to the intermediate series. However, the intent behind that motion was to stimulate interest in competition for the Gordon Cup, and since the intermediates at that time could not meet

the seniors, there was no possibility of a beaten senior team, reverting to intermediate with the possibility of again meeting the senior team by whom they have previously been eliminated.

We have it directly from Mr. Campbell that the motion which prompted the motion in question was exactly as outlined above. The intention was not then, and surely could never be, to permit any one team an unfair advantage. We understand Mr. Campbell has written you giving the history and purpose of the disputed motion and it is to be hoped the N.O.H.A. executive will not permit Porcupine a second chance. To do so would be an inexcusable blunder.

We are most anxious to insure the continuation of hockey in Iroquois Falls and to keep this club, as it has been in the past, one of the most active members in the association. But, a decision to allow Porcupine by winning the intermediate series, to again meet our senior team would be so unjust that we would have no recourse other than the withdrawal of the Iroquois Falls club from the association, lock stock and barrel. We have the unanimous approval of the town, our team and the club executive in this decision. We are convinced that all fairminded sport followers are solidly behind us in this matter.

We have wired you today that we have withdrawn our intermediate team from competition. We have been drawn against the winner of the Porcupine-Kirkland Lake playoff. There is no local interest in a playoff between our intermediates and the Porcupine seniors should they win from Kirkland, and we have therefore withdrawn our intermediate entry.

While nothing can be done about it this season, and while conditions may have made it justifiable in 1924, we do not consider the motion in question fair to intermediate teams at present in the association. If we hope to develop hockey teams in the North, groupings should be arranged such that teams will stay in their class the longest possible time during the season. Thus in the writer's opinion the only basis on which Porcupine, ostensibly a senior team, should be allowed to compete for the Gordon Cup, would be after an N.O.H.A. final had been declared in the intermediate series.

Putting a team of senior calibre back to a series of intermediate calibre can never prove anything but detrimental to the intermediates. We repeat that conditions in 1924 may have warranted the passage of the motion but we question the wisdom of its continuing in force. This opinion is given without any feeling of malice towards the Porcupine club and as our belief that it is in the best interests of the game.

We have given you herein a few of our thoughts in connection with the present unfortunate hockey mixup. It is our opinion that there is only one just solution to the difficulty, that there is only one solution which will reflect credit on the N.O.H.A. and its executive. It is to be hoped the executive will make a creditable decision.

Yours truly,
E. M. LITTLE,
Chairman, Iroquois Falls Hockey Commission.

MINING OFFICIALS SAIL FOR CONGRESS IN SOUTH AFRICA

A party of four prominent mining officials of Canada sailed on a Cunard liner, on Monday on their way to the third Empire Mining and Metallurgical Congress which is being held in Cape Town, South Africa, on March 24.

The party consists of Dr. Charles Camsell, deputy minister of Mines; W. B. Timm, chief engineer, Division of Ore Dressing and Metallurgy, Department of Mines, Ottawa; Thomas W. Gibson, deputy minister of Mines for Ontario; and P. B. Freeman, district engineer for the province of British Columbia.

The congress will be concluded on May 9 when the party will sail for home. Mr. Timm is vice-president of the Canadian Institute of Mining and Metallurgy, one of the constituent bodies of the Empire Congress.

Boston Transcript—If reported plans are carried out, the prohibition agents along the Canadian border may soon be known to fame as the world's largest standing army.

Georgetown Herald—The bear did not see his shadow on Sunday in this neighbourhood, and on that account it can be predicted with the utmost confidence that the weather for the next six weeks will be precisely the same as though he had.

MUCH PUBLICITY GIVEN TULAREMIA CASE HERE

Washington Authorities Have Been Consulted as Tularemia is Not Uncommon in the United States. First Recorded Case in Canada.

In the issue of The Advance on Jan. 16th, 1930, there was reference made to the case of tularemia at Timmins, the first recorded case of this disease in Canada, though it is becoming increasingly common in the United States and other countries. Canada's first reported case of this disease was diagnosed by Dr. L. Hudson, of Timmins. Dr. Hudson's diagnosis was confirmed by other medical men and by the laboratory tests as well as by the provincial board of health. Tularemia is an infection of a peculiar type arising from handling certain ground animals or birds including rabbits, squirrels, muskrats, opossums, and quail. The Timmins case developed by infection while skinning two wild rabbits. The Timmins case has roused very general notice and comment. Because it was the first case to be reported in Canada it has naturally come in for extended attention from all Canadian newspapers. United States newspapers have also given much space to the case. A reader of The Advance has handed in the following clipping from the Buffalo Sunday Times of recent date referring to the case. The Buffalo Sunday Times says—

"Tularemia, a serious type of fever common to most sections of the United States, but hitherto unknown in Canada, has made its appearance at Timmins and is already engaging the serious attention of the provincial department of health, under the direction of Hon. Dr. Forbes Godfrey. Immediate campaigns, by means of circulars and instruction from the various local medical officers of health, will be undertaken by the department to educate the public to the symptoms and dangers of the new disease.

"Extreme care will be urged in the dressing of wild rabbits, the chief source of infection determined by United States medical authorities, and that from which the sole Timmins case, is believed to have contracted the trouble. No dressing of these animals should be done without the use of rubber gloves.

"The Timmins patient was attended by Dr. Lou Hudson, former University of Toronto hockey star, who sent a health laboratory at Queen's Park. Here, the experts, who have been following the spread of the fever in the United States, and who last fall procured a culture from the public health service at Washington for purposes of checking up any possible infection in this province, diagnosed the Timmins case as tularemia.

"According to information compiled by the Washington authorities and now in the hands of Dr. Godfrey, no preventive vaccine or curative serum has been perfected, nor has any special drug been found effective against the disease. Rabbit meat, thoroughly

From Mother of Six

"I think Lydia E. Pinkham's Vegetable Compound is wonderful! I have had six children of which four are living and my youngest is a bonnie baby boy now eight months old who weighs 23 pounds. I have taken your medicine before each of them was born and have certainly received great benefit from it. I urge my friends to take it as I am sure they will receive the same help I did."
—Mrs. Milton McMullen, Vanessa, Ontario.
