

EIGHTS
and
SIXES

We are proud of the Nash "400" and ready to show you why

We are thoroughly convinced that any one who compares motor cars today will buy a Nash.

Nash designers and engineers have built three exceptional motor cars in three different price fields. Comparison shows each one to be the value of its class.

The Twin-Ignition Eight—the only straight eight at the price with Twin-Ignition, 9-bearing, integrally counterweighted crankshaft, aluminum alloy connecting rods, Bijur Centralized Chassis Lubrication and Duplate non-shatterable plate glass throughout.

The Twin-Ignition Six—the only car in its field with Twin-Ignition performance. Drive this car and you'll realize it's the kind of performance you've always wanted.

The Single Six—the only car in the \$1000 class with automatic centralized chassis lubrication; automatic, thermostat-controlled radiator shutters; headlamps and cowllamps chromium nicked; twin cowl ventilators; and a high compression, completely pressure lubricated, 7-bearing motor.

Nash Features You Should Know

Centralized chassis lubrication, built-in, automatic radiator shutters, and the world's easiest steering in every model. Adjustable front seats. Steel spring covers with lifetime spring lubrication, in the Twin-Ignition Eight and Twin-Ignition Six lines. The priceless protection at no extra cost of Duplate, non-shatterable plate glass in all doors, windows, and windshields throughout the Twin-Ignition Eight line. This glass is also available at slight extra cost in all other Nash cars.

NORTHLAND MOTOR SALES
18 PINE STREET SOUTH TIMMINS, ONTARIO

Active Season Opened by Prospectors Airways

Prospectors Airways have commenced another season, says The Mail and Empire, and one of the three airplanes has already been brought into operation. Robert Cockeram, Peter Graham and Glynn R. Burge left Halleybury a few days ago in their large plane, with Amos or Oskelaneo as their first objective. It is understood that the flying partners intend awaiting favourable conditions at one of those points, with a view toward flying to the Opemiska Lake area as quickly as conditions will permit.

Results obtained during the break-up period on the Ventures property are of more than usual importance to these men and to the organization as a whole. The Ventures property was optioned from Prospectors Airways for a price involving \$260,000 and 485,000 shares of stock in a 3,000,000 share company to be formed.

Surface results rank among the most impressive ever disclosed in any copper property in Canada. Diamond drilling has already shown the ore as continuing to between 150 and 200 feet in depth.

Those identified with Prospectors Airways are pleased with results so far obtained through diamond drilling.

Meantime, various parties of the Prospectors Airways have been sent to fields in which they are to operate during the coming summer. Two or three of these parties were sent out before the commencement of the break-up season and already been prospecting in the Opemiska Lake area for more than a month.

Those directing affairs of the Prospectors Airways are among the more experienced and cautious prospectors.

The airplane carrying Cockeram, Graham and Burge may even now be racing over the virgin fields of Quebec, carrying first word, since the break-up from the Opemiska Lake area. Many mining men and shareholders in various concerns which have become interested in that section are awaiting this word. Provided the drill holes completed during the break-up period show surface conditions to be continuing over important length of depth, a boom is expected. At any rate, the silence will soon be broken.

London, (Eng.), TIT-BITS.—One of the oddest churches in the world, that at Benoni, about 20 miles from Johannesburg, S.A., is to be moved from its present site. This church is constructed entirely of cardboard and beaver board, and was sent from England about 20 years ago in sections. It has been extensively used and has proven efficient.

PLANTING TREES TO USE WASTE LANDS IN ONTARIO

Re-forestation Being Carried Out Near
Thessalon by the Forestry Branch
of the Ontario Dept. of Lands
and Forests.

The matter of re-forestation of waste lands is a matter that is important to all Ontario but of special and vital interest to the North. The plans set out by Hon. Mr. Finlayson for transplanting farmers from poor lands in Muskoka, Haliburton, Hastings and other counties in Southern Ontario to this North Land and its fertile acres and then letting the waste lands vacated by the farmers go back to forestry was very closely considered by all in the North. It takes some time, of course, to make such a plan successful, but it does look like the ideal plan, doubtless benefit, seeing to settlement in the good areas of the North and also helping re-forestation. Though the interest is keen in this double plan other plans for reforestation are also of interest. In discussing the question The Toronto Mail and Empire in an editorial article last week says:—

"The forestry branch of the Ontario department of lands and forests has one hundred and ten men at work north of Thessalon planting white, red, Scotch and jack pine trees on a tract of land that is locally known as the "Desert." This plateau was formerly occupied by a pine forest, but twenty-five years ago it was denuded of trees by lumbermen. Since then it has been several times the scene of fires that have destroyed young trees and other vegetation. The plateau thus became a sandy waste, and from that fact it derived its local name. Two years ago the Ontario forestry department began the work of reforesting this land. In the past two years it has planted on 1,500 acres of the plateau 1,500,000 young trees that it secured from the provincial forest stations at St. Williams, Midhurst and Orono. This year the department will plant 2,000,000 more trees on 2,000 acres of the land.

"In doing this work the department is acting in accordance with advice that it has given to farmers and to municipalities and that it has assisted many farmers and a number of counties and other municipalities to carry out. The department has urged farmers to plant trees on waste land on their properties and has offered to supply the farmers with certain quantities of young trees for planting. It has undertaken to supply trees and co-operate with certain public bodies in the planting of forest demonstration plots. It has also encouraged counties to acquire tracts of waste land within their boundaries for the establishment of county forests and has been prepared to supply trees, plant them and take charge of the management of the new forests for a period of years.

"In the territory north of Thessalon the department is putting land that formerly was forested and that is now unsuited for agriculture, to use. It is incurring some expense, but it will have, when the trees now being planted come to maturity, timber that will be of value. Whether the return from the timber will be sufficient to make the operation a profitable one from a financial standpoint, the heads of the department probably could judge. On the other hand, the operation may produce valuable results other than financial returns. The trees that are being planted will prevent the sand, on the land that is being reforested from drifting to adjacent land. The planting of the trees and the management of the plantation, carried on in conjunction with the department's studies of tree growth in Northern Ontario, may also assist the Government of Ontario in its effort to devise methods of perpetuating timber supplies in the province."

BOYS URGED TO GET IN SHAPE FOR ONTARIO CHAMPIONSHIPS

In a note in the "Sportology" column of The North Bay Nugget last week "Observer" says:—"When this week has elapsed, only a fortnight will remain until the schoolboy track and field experts of Northern Ontario are bugled into action for the annual district meet in the Ontario schools championship trials. The qualifying meet will be held here on Saturday, June 7, and extensive preparations are under way for the event. It is to be hoped that the scholars interested have been dutiful at training. The standards set by the Ontario Athletic Commission demand smart performances before an okay to the provincial championship meet at Hamilton, on August 22, is issued. However capable, no entrant can afford to take the district tests lightly. The training period should start with the announcement of the date of the meet, and continue until the district meet, and between that time and the championship meet, the district winners should be striving to improve their work. Northern Ontario has only started to demonstrate the profitability of this system of rearing track and field artists. One or two who have since graduated, had the honour of coping first place medals in the finals to open the gate for further noteworthy accomplishments. From Sault Ste. Marie, Sudbury, North Bay, Halleybury, Cobalt, Kirkland Lake, Timmins and South Porcupine centres should come boys capable of matching skill with Southern Ontario students. This year's district meet should be representative of these and many other centres, and a concerted effort should be put forth in order to send a highly capable team to the finals."

Mr. and Mrs. P. J. Lauzon, of Ottawa were Timmins visitors last week.

COBALT CASEY DISAPPEARS BUT IS NOT YET FORGOTTEN

The following paragraph from The North Bay Nugget will be read with more interest: "George Herbert Shaw, more popularly known as Cobalt Casey, has vanished from our midst, and though well known in the district, it would be rather stretching it to say that he was the most popular. A short time ago he was convicted of a breach of the law and was remanded, being allowed out on his own recognizance to appear one week later for sentence. He did not appear at the end of the week and now he is a wanderer carefully avoiding his former haunts here. Should he come back and the police see him, he will be gathered in and given his deserts. There will be no search made for Mr. Shaw, alias Cobalt Casey, and if he has departed from the district, the district will not mourn."

London, England, Daily Herald:—A worker of advanced age is the Rev. J. Cynddylan Jones, D.D., who is known throughout the Methodist world. There is not a chapel in the Presbyterian Church of Wales in England and Wales in which he has not officiated during his 66 years of active preaching. He was 90 years of age last Friday, and many admirers will regret to learn that he is not enjoying good health. I hear that his son, Professor E. Norman Jones who is Lecturer in Hebrew at the University College, Aberystwyth, is engaged in writing a "life" of his father. Dr. Cynddylan Jones besides preaching more than 5,000 sermons, has written over 70 volumes on theological matters"

Making your Production Curve Stay UP and your Maintenance Curve Stay DOWN!

PRODUCTION and Maintenance are eternally waging a battle of profits. Cutting corners on costs often means the difference between dividends and deficits.

Have you ever stopped to consider the fact that even when machinery is stopped for lubrication it really goes on the maintenance side of your ledgers? For surely non-productive machinery is distinctly a maintenance item. And when you add up the ten minutes here and the twenty minutes there, you'll find a sizable and savable total of hours in the course of a year.

Alemite Lubrication Systems are great money-savers on this one item alone. For you do not have to stop machinery for lubrication with Alemite. It is lubricated at full production speed!

Of course you know the money-saving story of Alemite equipment—how it is quickly applied with an Alemite Gun to dust-proof fittings—how it forces lubricant into bearings at 2500 pounds pressure, cleansing as it lubricates.

ALEMITE

Distributors — ROSS & O'NEILL, TIMMINS, ONTARIO

But to convince yourself thoroughly that you can add to your profits by subtracting from your lubricating expense, conduct your own test on Alemite. Replace obsolete grease cups and oil holes with Alemite fittings, choosing one machine or one department.

We have a set of special forms for you, to aid you in keeping systematic check of your comparative costs by the old way and the Alemite way. Upon what these figures show you at the end of even one month we will gladly rest our case.
