RELIEVE THE RESTLESS CONDITION BROUGHT ON BY THE PRESENCE OF WORMS AND RESTORE THE CHILD TO NORMAL HEALTH.

NO NARCOTICS—PLEASANT AS SUGAR

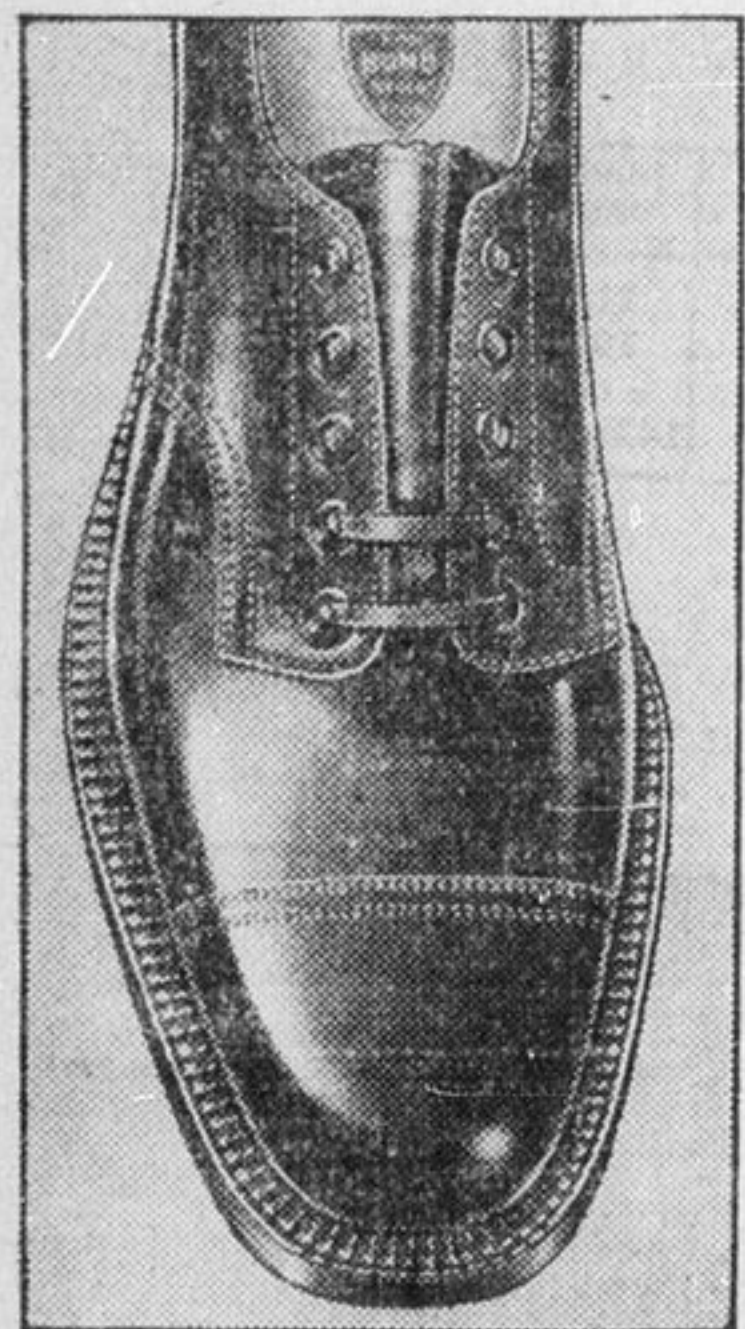

Here IS news

DACK'S
"Bond Street"
SHOES

formerly \$10

Now \$8.75

In view of existing conditions, we have reduced "Bond Street" shoes from \$10 to \$8.75. This reduction covers the full range of business, dress and sport wear, the special Scotch grain model and the noted Braemar Golf Shoes. Think of it—the same high Dack standards of style, quality of workmanship and leather—within the reach of every man! The price alone is changed—and, frankly this price is provisional. We can maintain it only if quantity production justifies it.

We believe that nowhere—at anywhere near the price—can you buy shoes that give you the style, comfort and wear of Dack's "Bond Street" shoes. When ordering by mail please add 25 cents for postage.

Students Invited to See the New Frontenac Cars

Dominion Motors Limited, builders of the Durant and Frontenac passenger cars, hopes that the boys and girls will accept this as an invitation to visit the display of these fine quality automobiles, at the Showrooms of Chas. Pierce & Sons Limited.

It is a foregone conclusion that the parents will not miss seeing these truly Canadian products, being interested in the craftsmanship of Canadian workmen, the skill of Canadian engineers and the benefit which results from patronizing a company that pioneered many of the industries that make automobile supplies in Canada.

But to the boys and girls who are familiar with the history of Count de Frontenac, the new Canadian car that now carries his illustrious name, will have special significance. The young students know that in 1672 Frontenac was appointed governor of Canada, and that he was recalled but returned in 1689 because he was considered the one best informed in Canadian affairs and the one most able to meet the peculiar conditions existing here at that time.

These students will, therefore, expect to see some of the sterling traits of Frontenac in the automobile named after him, and they will not be disappointed.

Here is a car that was built by the best informed engineers to meet the weather and road conditions prevailing throughout Canada and to do so with the greatest measure of efficiency and economy. The new refinements and improvements, including the popular ignition starting switch, the all-enclosed free wheeling unit, new style upholstery and many internal mechanical advantages are but a few of the points that will be explained by competent attendants.

"It is our desire that every boy and girl of high school age, and every motorist, and his wife, will see our displays and feel free to give our cars the closest inspection. The more questions they ask, the more we will be pleased," said Phil J. Duggan, the Dominion Motor Sales Manager.

NUMBER AND VALUE OF THE POULTRY IN CANADA, 1931

A report recently issued by the Dominion Bureau of Statistics estimates the number and value of farm poultry throughout Canada for the year 1931 as follows:

Hens and chickens, totalled 61,572,000 valued at \$36,908,000.
Turkeys, totalled 2,232,000, valued at \$4,198,000.
Geese, totalled 904,000, valued at \$1,385,000.
Ducks, totalled 760,000, valued at \$647,000.

HOPE FOR BRICK-MAKING PLANT AT LONG RAPIDS

An editorial note in The Northern Tribune of Kapuskasing last week says:

"Ruby Coal and Oil Syndicate manager announces a plan to take out between 1000 and 2000 tons of china clay from the claims on the Soveska river, a small tributary of the Missinaibi river, lying North-westerly from Smoky Falls, during the period of high spring water. The clay would go down the Missinaibi to the junction with the Moose, then to the river crossing where the T. & N. O. line runs from Cochrane to Moosonee. But high water is troublesome water, and there is much chance of such an experiment being unsuccessful and wasting money. It would seem to be better all round for the Department of Mines to take a guiding hand in the Mattagami clay deposits situation, and see that a tractor road is built from Smoky Falls to all the claims which are prepared to make shipments. Each company would retain its full rights to manage its own business, while the combined clay tonnage which would collect at the Smoky Falls railroad would amply justify clear and definite arrangements being made for the further rail movement of this latest addition to exports from the North. At the same time, we hope for the establishment of a large brick-making industry at either Long Rapids or Kapuskasing, right where the fire clay lies. With this successfully established, pottery works would follow, and chemical plants and so forth. Why pay freight on waste material in the raw?"

London Free Press:—The Progressives of Alberta evidently took the lesson of the Athabaska by-election to heart when they supported the Bennett bill to extend by two months the Unemployment Relief and Farm Act.

To Present Hockey Trophies, April 29

Formal Presentation of N.O.H.A. Cup and Other Championship Trophies to be Made at Hockey Club Dance

Tickets are being sold in town this week by members of the executive of the Timmins Hockey Club and invitations are being issued for a dance to be held in the McIntyre Recreation hall at Schumacher on Friday evening, April 29th.

Tommy Stephen's orchestra will provide the music for the event, and refreshments will be served. It is planned to introduce a few novel features which are expected to make the Hockey Club dance one of the most successful of the season.

During the evening the formal presentation of the N.O.H.A. Cup, emblematic of the senior hockey championship of Northern Ontario, will be made to the Timmins Club, the Timmins Seniors having won the northern championship this year, for the first time in history. It is expected that the president of the N.O.H.A., D. Sutherland, of Halleybury, or some other official of the association, will be here to make the presentation.

The handsome silver cups given to each member of the championship team will also be presented.

Both the N.O.H.A. trophy and the players individual cups have been on exhibition for some time in Molesley & Ball's drug store.

EAST GEDULD HAD LOSS IN EARLY PERIOD OF OUTPUT

East Geduld Mines Limited, the South African mine in which Dome Mines holds a substantial interest, in its fifth annual report shows a net working loss of 35,000 pound sterling for the preliminary period of production, July to December 31. For each of the past two months, however, a working profit has been made of over 16,000 pounds sterling from the treatment of over 50,000 tons of ore, yielding over 25s. worth of gold per ton. The plant has been designed to treat 60,000 tons monthly when working at capacity. Average yield should be increased to at least 28s. per ton (judging by the estimated value of the ore reserve), while costs may be further brought down from about 19s to under 18s per ton. Thus profits should exceed 360,000 pounds sterling per annum, on which the royalty payable under the lease will be from 10 to 15 per cent, according to the ratio of profit to gold yield.

At December 31 this floating indebtedness amounted to 32,562 pounds sterling. Up to that date the total capital expenditure on development and equipment had been 1,529,000 pounds sterling. Last year development had to be temporarily sub-ordinated to the completion of the plant and preparing the mine for production. As a result, only part of the 234,300 tons of ore crushed was replaced by new development. Consequently, the ore reserve was 150,000 tons lower for the year at 3,750,000 tons.

SEEKING TO CURB SMOKING BY YOUNG BOYS AND GIRLS

Timmins will be interested and sympathetic to Kirkland Lake police in one of their latest activities. The Kirkland Lake police at present are making a determined effort to curb the smoking of cigarettes by youngsters. In this work they are asking the co-operation of parents and others, and they should receive the fullest support. Timmins has suffered considerably from this evil and the police here are constantly at watch to stop youngsters smoking cigarettes. Boys going to school soon injure their health and mentality by indulging in smoking. One school teacher in Timmins once said that he could tell when a boy was smoking cigarettes by the way the boy would fall back in his studies. The looks of the lad and his inability to study and get along would give him away. This same teacher from a very wide experience said that he had never known a boy who used cigarettes who was able to get along at school. There is perhaps good reason to believe that cigarettes do not do adults much serious harm, but the case is altogether different in regard to growing boys. The police in Timmins have tried to stop injury to immature lads through cigarettes by going after any dealers selling tobacco to minors as well as watching the lads themselves. In Kirkland Lake it is intended to centre on the source of supply and severe penalties will be imposed on anyone giving or selling cigarettes to children. It should be remembered that parents can not lawfully supply cigarettes to their own children. The law is against the giving or selling of cigarettes to children no matter who the giver or seller may be. In view of the fact that it is generally believed that cigarettes are harmful to growing children, it would be thought that parents would do all possible to guard their youngsters in this matter, but if they do not, the law should be enforced, as they apparently intend to enforce it in Kirkland Lake for the benefit and protection of the children.

Huntingdon Gleaner:—Ever since a portrait of George Eastman was hung in the Eastman School of Music, at Rochester, N.Y., a light had been kept burning continuously over the picture. At noon the school janitor noticed the light was out, although a few minutes before it had been burning. He was at a telephone calling for a new bulb when news of Mr. Eastman's death reached the school.

Some Helpful Hints on Feeding Baby Chicks

(Written for The Advance by an Expert) Those who keep poultry or intend to keep them as a hobby or a livelihood will be turning their thoughts to the raising of baby chicks now that the things of nature are showing signs of the return of spring.

The first consideration, of course, is to secure chicks from a reliable source that the buyer will know he has chicks of health and vigour and of a strain that is bred to lay.

Many poultry farms and Government approved hatcheries are offering stock with the desired breeding, and with the co-operation of the Dominion Government are able to put out stock that are not surpassed anywhere in the world. Canadian poultry are world-renowned.

Whether you incubate your chicks at home by natural or artificial means or buy them from a hatchery or poultry farm matters little so long as you know they are from healthy vigorous stock.

When a chick is hatched it has enough nourishment for 48 to 72 hours and should in no case be fed anything before it is at least 48 hours old.

They should then be given water with the chill off it, followed by a little grit. Fine, clear, sharp sand sprinkled around is splendid for this purpose. A reliable chick mash can then be given, spread on clean paper and always fed dry. Allow chicks about ten minutes to eat. Repeat this feeding every three hours. From fifth day leave mash in sanitary feeding hoppers before them at all times, and an abundant supply of clear water and grit. Green feed such as sprouted oats, finely-chopped lettuce or onion tops, etc., should be fed liberally. Fine grain fed in the litter will give them exercise. At about six weeks old they should be gradually changed to a growing mash and a larger grain feed.

With the above sample rules observed and sanitation carefully practised anyone should be able to raise chicks with little trouble and a minimum loss. If free range where poultry have not run before is available pullets will greatly benefit through having access to it.

CANADIANS HOLD 74 PER CENT. OF STOCK OF MINES HERE

Some interesting figures have been tabulated in regard to the stocks of Canadian mines.

The total capitalization of 563 producing mines in Canada at the end of 1931 aggregated \$768,777,783, of this total \$686,577,099 was represented by common stocks.

With respect to both common stock and preferred stocks and bonds, etc., the copper-gold and nickel-copper group led with \$194,460,211 common stock and \$195,887,272 total capitalization. The gold stocks ranked second, with \$167,912,206 common stock and \$168,243,906 total capitalization.

In the distribution of ownership, Canadians occupy a dominating position, with a total of \$571,543,459, or 74.25 per cent. The United States ranks second with \$151,945,785, or 19.76 per cent. Great Britain third with \$42,054,133, or 5.45 per cent, and others \$3,234,406, or 44 per cent. With respect to common stock holdings only, Canada also holds first place by a very wide margin, with 73.27 per cent of the total. The United States stands second with 20.52 per cent, Great Britain third with 5.79 per cent and other countries with 4.2 per cent.

SETTLERS HAVE THEIR FIRST MINISTER IN FIFTEEN YEARS

Last week The Northern News, of Kirkland Lake, had the following paragraph:

"A community of people residing at Scotty Springs, midway between Kirkland Lake and Matheson, who settled in the district fifteen years ago, had their first contact with spiritual influences recently, when visited by Rev. John C. Cochrane, Superintendent of Home Missions for Northern Ontario for the United Church. Sixteen children for this community were baptized by Rev. Mr. Cochrane during this visit, he reported at the meeting of the Home Mission Board of the United Church of Canada in Toronto last week. The first ordained minister to visit Cockburn Island during a period of four years, Rev. Mr. Cochrane, while in the isolated community baptized twenty-three children. A total of 25,000 miles was covered in travel dur-

VALUE OF ROCK GARDENS IN BEAUTIFYING THE HOMES

"What is it that makes rock gardens so attractive?" asks Dr. W. T. Macoun, Dominion Horticulturist. And his answer to this question is: "One important reason is that the greatest amount of bloom is early in the spring when enthusiasm for gardening is at its highest and when flowers in the garden are most appreciated. Another attraction of the rock garden is that more depends on individual effort than, perhaps, with any other type of gardening. The rocks may be arranged so that they give a very unnatural effect, not to be desired, or they may be placed in such a way that the setting for the plants seems very natural."

ing the past year by the Home Mission Superintendent in Northern Ontario. In many instances he discovered missionaries and their wives carrying on under much difficulty."
