New Wing of Hearst Hospital is Opened

Mrs. Monck, of Timmins, President of the Cochrane Presbyterial W.M.S. Assists at Formal Opening Event.

All in the North Land will be interested in the following reference to the formal opening of the new wing at St. Paul's hospital at Hearst. The account of the event is by the Hearst correspondent of The Northern Tribune, of Kapuskasing:—

Formal Opening of New Wing of St. Paul's
A pleasing manifestation of a real community spirit of co-operation and good-will marked the ceremony attending the formal opening of the new wing, known as the Mitchell maternity wing, recently added to St. Paul's hospital here last Friday, Jan. 27th.

The dedicatory service was conducted by Rev. R. V. Wilson, pastor of St. Paul's United Church, assisted by Mrs. Monck, of Timmins, Northern representative of the United Church Women's Auxiliary Society. In his remarks Mr. Wilson dwelt on this worthwhile manner of practical Christianity and missionary effort in establishing such institutions where they were needed and referred to the great need in Canada, where, strange to say, infant mortality was all too high.

Mrs. Monck congratulated the community on the splendid reputation of St. Paul's hospital and referred to Miss Mitchell, the donor of the wing, whose generosity had made the building possible.

Rev. Thos. Mitten, rector of St. Matthew's Anglican Church followed in a congratulatory vein paying special tribute to the great co-operation among local doctors for the good of the community. Dr. Arkinstall, who has given much of his time to the design of the

wing, made a few remarks on the need of the building and regretted that circumstances had prevented it being built earlier.

Rev. Fr. Lambert, of Hearst Roman Catholic Church, spoke next. On behalf of his people and all the people of the community he wished to express appreciation of the great work done by St. Paul's hospital, and asked Mrs. Monck to especially convey this sentiment to the Women's Missionary Society from his people. He also wished to take advantage of the opportunity to extend his thanks to the staff of the hospital for their care and treatment which was always of the best.

Dr. L. A. Aubin followed in his usual happy vein, and in a felicitous speech congratulated the staff on their efficiency and co-operation, and dwelt on the great assistance the hospital was to him in his work and how great an asset it was to this North country.

Miss Jean Alexander, acting supt. of the hospital, in a few words thanked those present for their interest in the work and read a telegram of good wishes for the occasion from Miss Brown, the superintendent, who was absent because of illness.

The visitors were then conducted through the building and given an opportunity to see the addition and all were pleased with what they saw.

This modern addition, consisting of nursery, public and private wards, case and sterilizing rooms and service rooms with all accessories, will fill a long-felt want.

The old building has also been remodelled to meet growing needs, and Hearst should be justly appreciative of this institution in our midst.

Afternoon tea was served by the ladies of the town after the inspection.

North Bay Nugget:—There is one gag that will lose its meaning if this barter and script system gets going and that is the time-honored injunction of "Don't take any wooden nickels."

Ontario Taking Notable Part in Gold Production

There is a general agreement with the suggestion that one of the things the world needs to-day for a revival of international trade is a supply of new gold. In supplying this need, it should not be forgotten that the part of Canada—of Ontario—of the Porcupine—is a notable one. Discussing the matter in a recent editorial article The Toronto Mail and Empire one day last week had the following:—

"In his address to the Ottawa University Club on Wednesday, Sir William Clark, British High Commissioner to Canada, noted that in May last the Bank of England resumed the purchase of gold. From India came about 50,000,000 pounds sterling an amount approximately equivalent to a year's output of the mines in South Africa, and the shipments seem likely to continue. India for years imported gold on a considerable scale, and her hidden hoards are thought still to be very large. Another unexpected addition to Britain's gold supplies was the domestic "gold rush" when the public suddenly realized what a high price was obtainable for gold and hurried to sell every kind of article from sovereigns to artificial teeth. According to an official estimate at least 14 million pounds worth was obtained in this way.

"These statements serve to emphasize the insistence of the international scramble for all available supplies of the precious metal. Whether nations are on or off the gold standard they must have the bullion as a means of stabilizing their credit and currency systems. This world-wide condition is at the basis of the present activity in Canadian gold mining. At the critical moment this country jumped into second place among all gold-producing nations. The output of the precious metal from our mines is increasing by millions of dollars annually. Old mines are producing more than ever before. New mines are being brought into production; and the search for new properties proceeds far and wide. The domestic gold production has proved a powerful factor in stabilizing the country's credit position and in supporting the Canadian dollar. It is attracting tens of millions of dollars of new capital to the Dominion. It may, indeed, be that this particular industry is paving the way for an early return to economic prosperity."

"The deficiencies of Canada in mineral products were pointed out to be mainly in iron ore, high-quality coal and petroleum. In these Canada looms importantly as an Empire market as fortunately, in the interests of intra-Empire trade, Great Britain is well endowed with high-quality coals while at Canada's doorstep Newfoundland possesses what has been described by a noted American authority as "Probably the largest single reserve of high-grade iron ore in the world."

Only in petroleum, of the three commodities incomparably most important in world mineral trade, is the Empire deficient of resources within its own political boundaries and here the Trinidad oil fields are most interested as an Empire source of supply for Canada.

The base metals' position of Canada was given a careful analysis, Dr. Cammell explaining that 10 years ago the total production of copper, lead and

Mineral Wealth of Canada is Stressed

Dr. Charles Cammell, Deputy Minister of Mines, Ottawa, Gives Some Striking Facts and Figures About Canada's Position

Canada's metal mining industries may have to face more intensive competition in the future than they have ever met before, but they are well able to take care of themselves in world metal markets, in the opinion of Dr. Charles Cammell, Canada's Deputy Minister of Mines.

Concluding his presidential address on Canada's Position in Empire Mineral Developments before the Engineering Institute of Canada convention at Ottawa last week, Dr. Cammell stated in reference to the Dominion's metallic industries that "they are for the most part excellently equipped with ample supplies of raw material and production costs that are among the lowest in the world."

"The outlook which faces producers of practically all metals except gold, in Empire and non-Empire countries alike," stated Dr. Cammell, "is not only a period of temporary over-production, but also the fact that potential world supplies are probably larger than ever before as compared with prospective world demand even under what may be considered normal economic conditions."

Keener Competition Coming

Consumption of metals had increased rapidly, Dr. Cammell stated, but he considered it unlikely that the sharp upturn of recent years could be maintained indefinitely. Rather it was a question whether from now on production and consumption curves for primary metal would not in many cases show a distinct flattening. The future growth of Canada's metal mining industries, he believed, will depend on their ability to obtain and to hold, probably in the face of more intensive competition than they have ever met before, an even larger share of the world's markets than they do at present.

The deficiencies of Canada in mineral products were pointed out to be mainly in iron ore, high-quality coal and petroleum. In these Canada looms importantly as an Empire market as fortunately, in the interests of intra-Empire trade, Great Britain is well endowed with high-quality coals while at Canada's doorstep Newfoundland possesses what has been described by a noted American authority as "Probably the largest single reserve of high-grade iron ore in the world."

Only in petroleum, of the three commodities incomparably most important in world mineral trade, is the Empire deficient of resources within its own political boundaries and here the Trinidad oil fields are most interested as an Empire source of supply for Canada.

The base metals' position of Canada was given a careful analysis, Dr. Cammell explaining that 10 years ago the total production of copper, lead and

zinc in the Dominion barely reached 100,000 tons whereas by 1930 the annual output had increased to 400,000 tons. Canada has been launched, therefore, into sharp international competition for metal markets, a development viewed as one of the most significant changes that has occurred in the country's business structure.

The maximum output of copper in Canada in any one year was 152,000 tons, which was the production for 1930, but Canada could now produce 200,000 tons of the metal in the electrolytically refined state. Dr. Cammell pointed out that this capacity to produce is more than sufficient to supply the whole of the normal consumption of Great Britain, even after allowance for indicated domestic needs. Taking into consideration other parts of the Empire that must seek an outlet for surplus copper, notably Rhodesia, it became evident that markets outside the Empire must be found for a considerable portion of Canada's copper if her producing plants are to be fully employed.

Becoming Stronger

Fortunately for both Canada and Northern Rhodesia, their mines, he stated, are among the lowest cost copper producers in the world and this perhaps more than the extent of the ore deposits adds to the strength of their position particularly in these days of over production and intense competition.

The nickel industry, said Dr. Cammell not only gave Canada 90 per cent. of the world production of that metal but the same ore reserves added substantially to Empire strength in copper and provided the Empire's largest source of platinum metals.

Canada is also the Empire's only important source of cobalt and in recent years has become the Empire's leading producer of aluminum. This latter metal, it was pointed out, is one for which rapidly extending use is anticipated and already the production of this comparative newcomer in the ranks of important metals is materially greater than that of tin.

Averages for Teachers' Bowling, Second Period

The following are the Teachers' Bowling averages for the second period: G. Hughes, 179; M. Morrison, 178; O. Ramsay, 169; G. Everett, 169; J. Bogie, 165; F. MacDonald, 160; V. McKinley, 154; M. Tuckaberry, 153; E. Blyth, 151; H. White, 147; I. Sime, 143; V. Smith, 137; W. McKelvie, 133; E. Connor, 130; E. Ohlman, 127; J. Harris, 124; N. MacLeod, 124; M. Macintosh, 120; H. Prettie, 110; M. Thorburn, 104.

Sub. Team—C. MacDonald, 160; M. Humphries, 142; M. Cameron, 118.

The next regular meeting of the Timmins town council will be held on Monday afternoon, Feb. 27th, commencing at 4 p.m.

Favour Use of Dogs Again in Deer Hunts

Hunters' Game Protective Association Also Suggests Taxing of the Dogs Used for Hunting. Ontario Gun Licenses Discussed.

Unanimous opinion that dogs should be allowed in hunting was expressed in a resolution passed by the Ontario Hunters' Game Protective Association meeting in the King Edward Hotel, Toronto, last week.

Not only was the return of dogs in hunting approved, but the meeting also adopted the novel suggestion that such dogs should be taxed by the Provincial Government, thus assuring a new source of revenue. The amount of the tax was not mentioned, but it was said that the number of dogs to be so taxed would total in thousands in a normal hunting season.

in hunting deer were, that no hunter had ever been accidentally killed when hunting with dogs, and that the hunters feel that it contributes to the sport to have dogs with them and to hear their eager bay after the fleet and timid prey of the forest.

The association passed a resolution favouring the proposal that the gun license be made province-wide. At present only twenty-one counties of Ontario have a gun license. It was added that a very slight fee should be charged farmers for this gun license.

Another resolution urged that the bounty on wolves should be increased from \$25 per pelt to \$40 per pelt. That education in wild life conservation should be advanced in public schools was the burden of another resolution.

Scholars Get Face Wash for Mistakes in Spelling

That the children of Wahnapiatae public school, 13 miles from Sudbury, are having their faces washed in the snow for mistakes in spelling, was the accusation laid by Trustee Edward McCann against Mrs. Edward Craig, the school teacher, at a special meeting of the board Saturday evening.

"This was only a contest," Mrs. Craig explained. "I put up the questions myself to the class, giving them their choice of either writing 50 times every misspelt word, or taking a face-washing in the snow at the hands of those who had the correct answers. They unanimously agreed on the face-washing."

"Is that included in the school regulations?" queried Trustee William Land, chairman of the board.

"Don't you know that this might have serious consequences with weak children?" Trustee McCann asked the teacher.

"Well, I'm trying to teach the children to be better sports than their parents," retorted Mrs. Craig. "I've had enough of all this mud-slinging that is going around in this burg. I know how to handle children, and nobody will show me my business in that respect."

Trustee McCann was of the opinion that the practice should be stopped immediately.

Asked to accept a reduction in her salary of \$400, the teacher, who is now receiving \$1,100 a year, flatly refused.

Advised that outstanding taxes in the school section totalled \$500, she declared, "It's not the teacher's fault."

Mr. Auger was elected president of the New Liskeard board of trade at a recent meeting. Len Wilson is vice-president and Ernest Booker the secretary-treasurer.
