Canada Northern Power Corporation, Limited
Preferred Dividend No. 13

NOTICE is hereby given that a Dividend of 1 1/2% (being at the rate of 7% per annum) has been declared on the 7% Cumulative Preferred Stock of CANADA NORTHERN POWER CORPORATION LIMITED for the quarter ending March 31st, 1933, payable April 15th, 1933, to shareholders of record at the close of business on March 31st, 1933.

By order of the Board,
L. C. HASKELL, Secretary
Montreal, February 28th, 1933

Review of the Gold Mines for Past Year

Twenty-nine Producing Gold Mines in the Province. 1932 was Good Year for New Discoveries. Outlook Considered Good

Last week The Advance gave a condensed summary of the gold production for 1932 as outlined by the Ontario Department of Mines. The Dept. of Mines has issued a bulletin dealing with the matter in greater detail and the comments of the Dept. of Mines for Ontario on the 1932 gold operations, as recently issued in the bulletin referred to, are given below as follows:—

During 1932, production came from 29 properties operated in Ontario, 10 in the Porcupine belt, eight in the Kirkland Lake belt, seven in the Northwestern section of the Province, and four under the Miscellaneous heading. The gains in gold output over 1931 by fields were: Porcupine 7.1 per cent, or \$1,523,667; Kirkland Lake 8.8 per cent, or \$2,084,121; and Northwestern Ontario 37.2 per cent, or \$597,291.

Apart from the steadily increasing output by the well-established mines of Porcupine and Kirkland Lake, the outstanding features of the year have been the development of smaller mines in other parts of the Province, and prospecting activity. The poor market conditions for base metals such as copper, lead and zinc have tended to turn the prospector's attention almost entirely to gold, with the result that several deposits have been uncovered, and prospectors have spread their activities into new fields where favourable formation occur.

During the past year the Ashley mine in Bannockburn was brought into production, the Croesus mine in Munro township was reopened and efforts made to pick up the extension of that fabulously rich vein. Operations in the Swayze area were actively carried on, and good surface showings opened up on the Kenty, Derragh and other properties. Further to the west in the Michipicoten area, the Parkhill and Minto produced throughout the year,

while the new Goudreau made a small shipment of gold bullion. Mill enlargement to 100 tons has been made on at Little Long Lac in Thunder Bay district with encouraging results by the Sudbury Diamond Drilling Company. At the turn of the year freighting was being done by airplane to the Central Patricia mine, which lies some 20 miles north of Lake St. Joseph in the Crow River area. A small mill is being erected on this property.

Much investigational work was carried on at several former gold producers in Kenora district, including Caribou, Mikado and at Cedar Island on Lake of the Woods. This phase of the search for gold was perhaps unique in 1932 inasmuch as the interest in properties worked some years ago was more pronounced than formerly.

Events of interest in the producing gold camps in 1932 are summarized as follows:

Porcupine Belt

The Hollinger operated at a daily milling rate of 4,834 tons with an average recovery of \$5.83 per ton, as against a recovery of \$6.15 per ton in 1931. The physical condition of the mine remained unchanged. A. F. Brigham, retired as General Manager to become Consulting Engineer. He was succeeded by John Knox. Dr. Gratton completed the underground geological survey. McIntyre: The average milling rate was 1,976 tons for the year and \$7.50 per ton was recovered. The new mill is now operating smoothly. Preparations are under way to sink a winze from the 3,750-foot level on the Platt Vet section of the mine with an objective of 6,750 feet. Daily capacity of Dome mill is 1,466 tons, and recovery \$4.47 per ton. The installation of the blanket equipment in the mill has improved the extraction. Coniaurum and Vipond operated for the whole period. The March mine closed July 19. The Buffalo-Ankerite resumed operations in May, and has now increased the mill capacity to 325 tons daily. The Hayden mine operated its test mill in May and June. Some rich ore was recovered from the John Spence property at Triple Lake about 20 miles south of the Porcupine camp. Croesus in Munro township also operated and a small recovery of gold was made in September. October and November from the mine ore dumps.

Kirkland Lake Belt

The daily rate of milling at Lake Shore was 2,243 tons with an average of \$15.45 per ton recovered. The company is preparing to treat tailings deposited in Kirkland Lake independent of the Wright-Hargreaves Mines Ltd. To this end the Consolidated Tailings Ltd., was incorporated in April, 1932. The average mill rate at Teck-Hughes was 1,300 tons per day showing a recovery of \$12.31 per ton. The annual report of Nov. 22, 1932 stated that a block of ten levels below the thirtieth was opened up, and that the total ore length amounted to 3,388 feet having an estimated average grade of \$9.43 per ton. Mill capacity at the Wright-Hargreaves is 807 tons per day and average grade \$13.48. No. 4 shaft was completed to 4,000 feet in depth early in 1933, and it is planned to deepen No. 3 shaft to the same depth. The present mill capacity is to be increased to 1,000 tons using flotation process developed by the company's engineers. Other mines in the camp, Sylvanite and Kirkland Lake Gold, operated throughout the year with daily mill tonnages of 265 and 155 tons, averaging \$8.46 and \$9.28 per ton, respectively. The Tough-Oakes mine, renamed the Toburn, resumed operations in August after an idleness of 3 1/2 years. The rate of milling was 105 tons per day with ore averaging \$13.87 per ton. Development on the Macassa to the west and on the King Kirkland to the east of the producers was continued during the period, and at the former ore is being opened up on the 2,200 and 2,325-foot levels. The Barry Hollinger, is about six miles south of the Kirkland Lake area, operated at 96 tons daily capacity with an average recovery of \$4.59 per ton. The Ashley gold mine, operated by Mining Corporation of Canada, Ltd., in Bannockburn about 40 miles west of the main area, commenced milling August 25, 1932, and the average milling rate per day for the period was 75 tons, with a recovery of \$9.00 per ton. Considerable absorption took place in the new mill which has recently been stepped up to 115 tons daily.

Northwestern Ontario

This portion of Ontario may be regarded as extending from the Algoma Central Railway to the western boundary of the Province, and while the gold mines of this area with the exception of the Howey are not large, yet the developments recently have been important. In the extreme northwest at Red Lake in the Patricia portion of Kenora district the Howey is operating profitably on an ore averaging \$3.94 ton. The average rate of milling was 780 tons in 1932 and costs of \$2.47 per ton before depreciation are the lowest of any gold mine in the Province. This mine which is 100 miles from the railway affords a striking example of what may be accomplished to-day in developing gold deposits remote from railway transportation. The Moss mine near Kashabowie was operated in 1932 at an average rate of 82 tons per day and \$6.85 per ton recovery. The Minto and Parkhill in Michipicoten while smaller in mill equipment, each treated ores of \$8.72 grade. At Schreiber several properties were being worked including the McKellar-Longworth by Schreiber Gold Mines, Limited, and the Harkness-Hays. From the former gold ore was shipped by R. N. Palmer to the International Nickel Company at Copper Cliff and to the Noranda smelter.

Area	Total value
Porcupine Belt	\$

In addition to the values given, exchange compensation amounted to \$2,814,570.27 at Porcupine; \$3,137,847.52 at Kirkland Lake, and \$211,630.04 in Northwestern Ontario, or a total of \$6,164,270.57 from the gold mines.

For the Forty Days Pre-Easter Fasting

Some Special Recipes for the Lenten by an Expert in Domestic Science and Culinary Arts.

Writing for the Lenten season, Barbara B. Brooks, noted domestic science expert and adept in the arts of culinary science, sends the following to The Advance for this week:—

"These forty days of pre-Easter fasting are with us again. And this is one time when the fasts seem also to be with us. For Lenten menus very fortunately fit right in with ideas of economy and thrifty meal-planning. With many costly items traditionally eliminated during this season, market lists are very lenient on flattened purses.

"No need for monotony, either. For the housewife who thrills at a chance to try a lot of new ideas, Lent offers a very good time to experiment with menus and spring some rather different meals on the family—meals that transfer the starring role to eggs, cheeses of interesting names and flavours, legumes, vegetables, or a wide selection of fish, both canned and fresh.

"Eggs assume new importance during the Lenten season, perhaps in anticipation of their featured role on Easter morning. This year egg prices have hit 'rock bottom,' as the hen steadily keeps up production and the quality for her full day's work despite depleted values for her labours. For Lenten meals, eggs may be served alone or in many delightful combinations with cheese, a sin souffles, croquettes, fondues, a la king, en casserole, or as cheese eggs. The recipe for the latter is given below. It blends the tasty flavour of Old English or Roquefort Cheese with eggs, fried in deep fat and served hot with tomato sauce. Wouldn't this be a dainty treat for a company luncheon?"

Cheese Eggs

12 eggs; 2 ounces Old English cheese (creamed); 1 cup green pepper (finely chopped); 1 cup celery (finely chopped); 1 teaspoon salt; 1 teaspoon pepper; 2 teaspoons water; 2 cups corn flake crumbs (fine).

Hard cook eggs about 25 minutes in water just below the boiling temperature. Cover with cold water and remove shells. Cut eggs in half lengthwise and remove yolks. Mash yolks and combine with cheese, green pepper, celery and seasonings. Refill the egg whites with mixture and press halves back together. Secure with toothpick if necessary. Dip in beaten raw egg to which water has been added. Roll in corn flake crumbs and fry in deep fat (375° F.) until light brown in colour. Serve hot with tomato sauce.

Note: Roquefort cheese may be substituted in this recipe but 1 tablespoon of cream is necessary to make filling moist. Any other snappy cheese may be used.

Yield: 6 servings.

"Cheese affords a pleasant variation of many vegetable dishes and the enhancing of their food value so that they can assume the place of the 'piece de resistance' in one-dish meals. Such is the case when cauliflower is prepared in casserole with cheese."

Cauliflower in Casserole
1 head cauliflower (boiled); 3 cooked carrots (diced); 1 cup peas (cooked); 2 cups white sauce (medium); 1 lb. American cheese; 2 cups corn flakes.

Arrange carrots and peas around head of cauliflower in casserole dish. Cover with well seasoned white sauce. Sprinkle with grated cheese and corn flake crumbs. Bake in moderate oven (350° F.) 20 minutes.

Yield: 6 servings.

Peanut Butter Loaf
1 cup peanut butter; 1 heaping cup corn flakes; 1 cup cold water; 1 egg; 1 1/2 teaspoons corn starch. Sage to taste, if desired.

Mix thoroughly. Put into a well greased coffee can. Cover and bake 1 1/2 hours in a moderate oven (350° F.).

Padadena Post:—The world is so full of a number of things that none of us now can be happy as kings.

People of United States Prospecting in the Attic

The situation in the United States recently has given rise to many remarkable incidents and cases. Some of them are amusing and the people of the United States must be given credit for the fact that they have shown courage enough to look upon the humorous side. It may be said that in their trouble the United States people have won more admiration and friendliness from other nations than they did in all the days of their prosperity and dominance, or domineering. The closing of the United States banks for a holiday brought about many entertaining situations. One of these was the effect to find valuables that would bring cash or its equivalent. This search was particularly centred on the finding of gold. It might be termed "prospecting in the attic," where search was made for articles of gold of any kind. The Buffalo Times describes what The Advance here calls "prospecting in the attic," as follows:—

"The 1933 gold rush is on. Dresser drawer 'sourdoughs' are ransacking every nook and cranny of the house in the search for gold; modern Forty-niners are turning the attic stairs into formidable Yukon trails; old and forgotten trunks serve as claims from which are panned nuggets of discarded family watches, rings and what not.

"The trail may not be as hard as in the days of '49 but the gold fever of the prospectors is as high and the march on assay stations is as rapid when a strike has been made.

"It all started when cash became scarce and old gold began bringing a premium. Of course, some of the first-floor flat claims are proving busts, much to the sorrow of Buffalo prospectors who thought they had a small fortune only to find 90 per cent. of their ore is worthless. It looks like gold but alas, it isn't.

"Buffalo dealers in gold say only about 10 per cent. of the metal brought to them is worth anything. Many of the trinkets, jewelry and watches offered are gold-filled or plated. A lot, they say, isn't gold at all, even though it glitters like the real thing."

MEAN TYPE OF "BURGLARS" GIVEN TERMS AT BURWASH

Two Kirkland Lake young men were before Magistrate Atkinson recently on charges of breaking and entering a local house. They were shown by the evidence to have taken out a pane of glass in one of the windows to manipulate the catch and let themselves in. They had boarded at the house, but had been ordered out and away because they were \$45.00 behind in their board. One of them had \$100.00 in liquor bought on his permit. After forcing entry into the house they made the lady of the house get up out of bed to prepare a meal for them. After the kindness shown these fellows by the gentleman and the lady of the house the magistrate thought the two "burglars" were rather mean to break into

the place while the husband was at work, but when they added to this meanness a nasty tendency to throw dirty insinuations at the lady of the house, they were still less popular with the court. Crown Attorney Smiley made comment on the mean disposition of the two accused fellows. "You're two of the meanest hounds I've ever met," the magistrate remarked as he sentenced the pair to three months in jail with hard labour. It developed during the trial that the men were cousins of the owner of the house, which prompted the Crown Attorney to say that sometimes relatives were as mean as some strangers. It seemed to be a case of "biting the hand that fed them."

Montreal Gazette:—The first two days of the British Industries Fair at Birmingham saw a record attendance, buyers registered from at home and overseas totalling 15,782, some 166 more than last year. This seems to be a sign that trade representatives are hopeful of the immediate future and are preparing to do business as usual, or to whatever extent conditions warrant.

IF THIS IS VICTORY, THEN WHAT PRICE IS DEFEAT?

The following from an Old Country newspaper is handed in by a reader of The Advance who believes that a smile in time helps carry the load:—

Two navies visiting a museum for the first time, pulled up in front of a statue of a Roman gladiator.

One of the arms was broken, the helmet was battered, and there were ugly scars on his face.

Underneath the statue was a brass plate with the word "Victory."

"By gum," Jack," said one of the navies, "if that there chap won, I'd like to have seen the fellow who lost!"

Sudbury Star:—Hon. Hugh Guthrie, Minister of Justice, says he has received many threats in connection with prosecution of Communist convicts in Portsmouth. When conditions get to a pass where "Reds" intimidate ministers of the crown, it seems time that citizens of every political stripe unite to fight against this radical element that would go to any extreme to upset Canada's constitutional government.
