Relief Cases, Etc. Before Council

(Continued from Page One)
too little for pulp cutting, though he confessed he knew nothing about it but what he heard.
"It's not a case of getting \$5.00 a day," said the mayor, "but it means taking a dollar a day till times improve."
Councillor Parsons pointed out that in 1911 pulp wood had been cut for \$2.00 a cord. The cost of food, etc., was just about the same now.
The second speaker said that seventy of the unemployed had been sleeping in the Finn hall, but it would not be sanitary for them to continue to do so in the summer. He thought the council should provide them some sort of shelter now. Perhaps, the council might use its influence to get old lumber from the mines to build some kind of shacks.
Mayor Drew asked this man to say honestly whether Silver & Sharp could afford to pay more than \$2.00 per cord with the small amount they were receiving themselves. The man could not say.

A. Borland, Sr., president of the grounds committee, called council's attention to the damage done to the grounds, grandstands and fence by recent storms. The committee did not have the money to defray the costs of repairs thus made necessary, and he thought the council might help out, as the grounds were a community asset, used by all sports and as a playground for the children. The committee had work of improvement under way at present, but could not finance the repairing of the stands and fence without help. Some assistance might be secured from the Hollinger. The town had some interest in the stands having given a grant for their erection. Mayor Drew thought it reasonable to assist in some way and the council agreed. The grounds provided a very important need in the town. Chief Borland said that two tenders had been received but the cheaper one was the one to be considered, the other being too good for the present. Eventually the question was left in the hands of the board of works, the idea being for the town to supply workers from among these on relief. The grounds committee since has secured a first-class foreman and work is now in progress to put the stands, fence and grounds in good condition.
Mr. Seymour told council that, though he had clearly understood that the court of appeal had granted a \$300 reduction on the assessment of his house, he found now that this was not allowed according to his tax bill. The assessor said that Mr. Seymour was evidently mistaken as the court of revision had sustained the assessment. Documentary evidence was produced to prove this but Mr. Seymour was certain a reduction of \$300.00 had been made. Mayor Drew pointed out that the council could do nothing unless a mistake had been made in transcribing the clerk's notes or similar error. The matter is to be looked into further.

A. E. Phillips told the council about the case of one of his houses where the tenant had assured him that the water rates were paid, but the town had shut off the water and the new tenant was not able to secure water. Mr. Phillips was expected to pay \$2.50 in this case and he thought it a hardship as the tenant had owed several months' rent before leaving and it was bad enough to lose this without having to pay the water. The defaulting tenant had been on relief and Mr. Phillips had thought the town was arranging for the water rates as the tenant said. Mr. Dunn said that he had made no such arrangements and knew nothing of the matter. In view of all the circumstances Councillor Maltais thought the charge for turning off the water might be dropped. Some of the councillors thought this would set a very dangerous precedent, so instead it was decided to rebate the water rates for the month they had been defaulted by the tenant.

A man who wished to get the grounds around his house in shape asked leave to connect with the sewer, but volunteered to give a written guarantee to the town that he would not use the sewer until such time as this was allowed by the town. He simply wanted to avoid tearing up his lawn or grounds to make the connection later with the new sewer. The suggestion was considered reasonable by council and the matter was left with the committee. Councillor Parsons said there were several in exactly the same position. The new sewers could not be used until after the disposal plant was enlarged, but with absolute guarantees that the sewers would not be used there was no reason why the connections should not be made for the convenience of the properties.
An employee of the town, who had been the victim of two different accidents, explained his case to the council. In the first accident a stone had struck his shoulder, but the accident did not appear serious enough to report to the Workmen's Compensation Board. Several months later he strained the muscles of his chest and was laid up as a consequence. This second accident was duly reported and he had received compensation but later the compensation was stopped. The doctors said he had a tumor in the breast and that the straining of muscles was likely the cause of this. The Compensation Board, however, had cut him off, and now he had not only the trouble in his breast but the shoulder that had been injured had developed a sort of paralysis that made it useless. He was unable to work and was generally in unfortunate position. Effort will be made to see what can be done to assure this man a fair deal.

Authority was given for the rebating of certain taxes made in error. Also for rebate of water rates where water had not been used.
A man who had applied for sewer connections will receive his money back.

provided the town has not done its part of the work.
The public library was granted \$1000.00 on account.
A grant of \$100.00 was passed to assist the good work of the Timmins Horticultural Society.
Several adjustments in the 1932 assessment roll were authorized, chiefly for the cases of non-residents paying income tax and for income tax in cases where men had been married while assessed as single men. Changes in the 1933 assessment roll were also authorized to meet cases where there had been changes of ownership.

Resolutions were passed authorizing the changing of street lights so as to equalize the lighting in certain blocks. Authority was given for the changing of the transformer on Balsam street to a more suitable pole.
Authority was given for the installation of another gas pump on Sixth avenue.
A property-owner wrote council explaining that he had not known that the regulations did not permit the use of wooden shingles for siding a house until after the shingles were bought and delivered. The shingles did not increase the risk as they were on the sides of the house and not on the roof. The house was set on the lot in such a way that it was a considerable distance from any other building. The matter was referred to the fire and light committee.

Reference was made to the applications received for the position of plumbing inspector. The matter had been discussed at a special meeting of the council some time ago and many of the councillors felt it would be to the benefit of the town from a health and safety standpoint to have such an official. Councillor Richardson outlined the provisions of the proposed by-law. \$100 would be charged for a permit to instal new plumbing, this to be paid by the contractor. Then \$50 per piece would be charged for plumbing installed, this to be paid by owner. From the revenue thus received enough would be realized to pay a plumbing inspector on a monthly basis. It would be a needed protection to public health. There were many cases where illness was caused by defective plumbing and where the installations were not properly made. The question was laid over for further consideration.

In reference to sanitary conditions in town Councillor Massie said that he had not seen the town in better condition so far as yards and general cleanliness and sanitation were concerned.

Information Given on Growing Roses

Secretary of Timmins Horticultural Society Writes on Growing Roses in the North Land. Lecture Here on June 20th.

The following letter is not only gladly published by The Advance, but readers are urged to read it for the valuable helps and hints it contains:—

Timmins, Ont., May 22rd, 1933

To the Editor of The Advance, Timmins.

Dear Sir:—Roses will stand cold weather, but in the North certain winter protection is necessary. The chief damage suffered by roses is caused in early spring if they are not protected. During a mild spell, if the ground is bare, the sap starts to flow in the cell tissue of the canes; then after a few days of mild weather comes severe frost; the sap ceases to flow, freezes, expands and bursts the cell walls, thus killing the tissue. The lack of this knowledge has caused many unnecessary losses, as well as causing people in the North to avoid planting some kinds of roses. With proper winter protection we can all enjoy the wonderful hybrid tea roses, as well as the hardier sorts. Bank to about ten inches with earth and then add two or three inches of leaves or straw. After the spring frosts are past, level the ground and prune bushes back severely to within six or eight inches from the ground. This applies to all types of roses with the exception of climbers, the long branches of which should be laid on the ground and covered well with straw or leaves. Climbers also should be pruned each spring. All wood more than two years old should be cut out and laterals on two-year-old wood only should be left. For all the time and trouble this care requires you will be amply repaid in finer and more abundant blooms each year.

John F. Clark, lecturer on horticulture, will give an illustrated address on Tuesday, June 20th. The subject will be "Continuous Bloom in the Garden," which will be fully illustrated. Be sure you do not miss this.

ALFRED E. TAYLOR,
Secretary-Treasurer,
Timmins Horticultural Society.

Fat Man Loses 63 lbs.

Kruschen and Walking
Overweight men who want to lose a few pounds can have the benefit of this man's experiences. He gives them to us for publication:—

"In a little over twelve months I have reduced my weight from 227 lbs. to 164 lbs., by taking a dose of Kruschen Salts every morning for six months, and taking walking exercise every day. This remarkable achievement is all the more interesting when one considers that I did not resort to any form of dieting."—G. L. B.

You can take off fat with Kruschen Salts if you will take one-half teaspoon in hot water every morning before breakfast, modify your diet, and exercise regularly.

While you are losing fat you will be gaining in energy—in endurance—in ambition. The old arm chair won't hold you any more—you'll want to be up and doing—you'll enjoy work and active recreation and you'll sleep like a top. You'll lose fat, and probably live years longer.
