To Name 60 Justices of Peace for North

Attorney-General Says "Better Class of Men to be Appointed." Will be More on Line of British J.P.'s, he Says.

According to despatches from Toronto to last week the appointment of about sixty Justices of the Peace for Northern Ontario will be made in the next week or so. In the meantime the J.P.'s appointed in past years are carrying on as before. It may be noted that while there were 10,000 Justices of the Peace in the province, and this seems an unusually large number, there were not so many Justices in the North in proportion as in other places. Those in close touch with legal and criminal affairs are inclined to think that Timmins, for instance, has not had too many J.P.'s for the size of the community and the general conditions here. There seems to be little question on any side in regard to this but, of course, there is some difference of opinion as to the suitability of some of those appointed, though the great majority seem to be good men for the work. To suit the convenience and needs of the people in general and the special conditions here there should be three or four Justices of the Peace at least for the town, with others at Schumacher and South Porcupine to meet the needs there. The men already holding the appointments in this district are still legally entitled to act, none of them, as far as known, having received formal notice that they were retired. It is to be hoped that new men will be broken in to the work before the old ones are dispensed with.

According to the despatch from Toronto it is anticipated that in almost every centre of population a justice will be named. He will try infractions of the municipal by-laws, offences under the Highway Traffic Act and Liquor Control Act and minor offences in the Criminal Code which are not indictable. Until recently there were more than 10,000 Justices of the Peace in Ontario.

BACKACHE quickly disappears when the Liver and Kidneys are diseased by Dr. CHASE'S K&L PILLS

These were all dismissed by an order in council. The attorney-general will now appoint new justices of the peace and give the title only to those worthy of it, along the lines of English J.P.'s. "They will also have much wider powers than they have at the present time," said the attorney-general. The new justices of the peace will work on a fee basis, it was indicated, though there will not be any additional remuneration where a conviction is recorded.

Further Announcements by Newspapers About T. N. O.

One of the unsatisfactory things about the present administration is the number of announcements by the newspapers. In the majority of cases the newspapers are right in their forecasts, which makes it all the more unsatisfactory. One of the latest announcements was that Earl Hutchinson who gave up his seat as M.L.A. for Kenora to allow Hon. Peter Heenan into the Legislature, is to be appointed as one of the T. & N. O. commissioners.

In addition to his appointment to the commission Mr. Hutchinson will likely be given a post on the Workmen's Compensation Board. The latter position will be salaried, but Premier Hepburn announced that no salaries will be given members of the revised T. & N. O. commission.

Definite announcement that George W. Lee would be asked for his resignation at once as chairman of the T. & N. O. was made by the prime minister. "Mr. Lee has to go," said the premier. "Disclosures so far show that he is not a fit and proper person to carry on. The road is due for a complete overhauling."

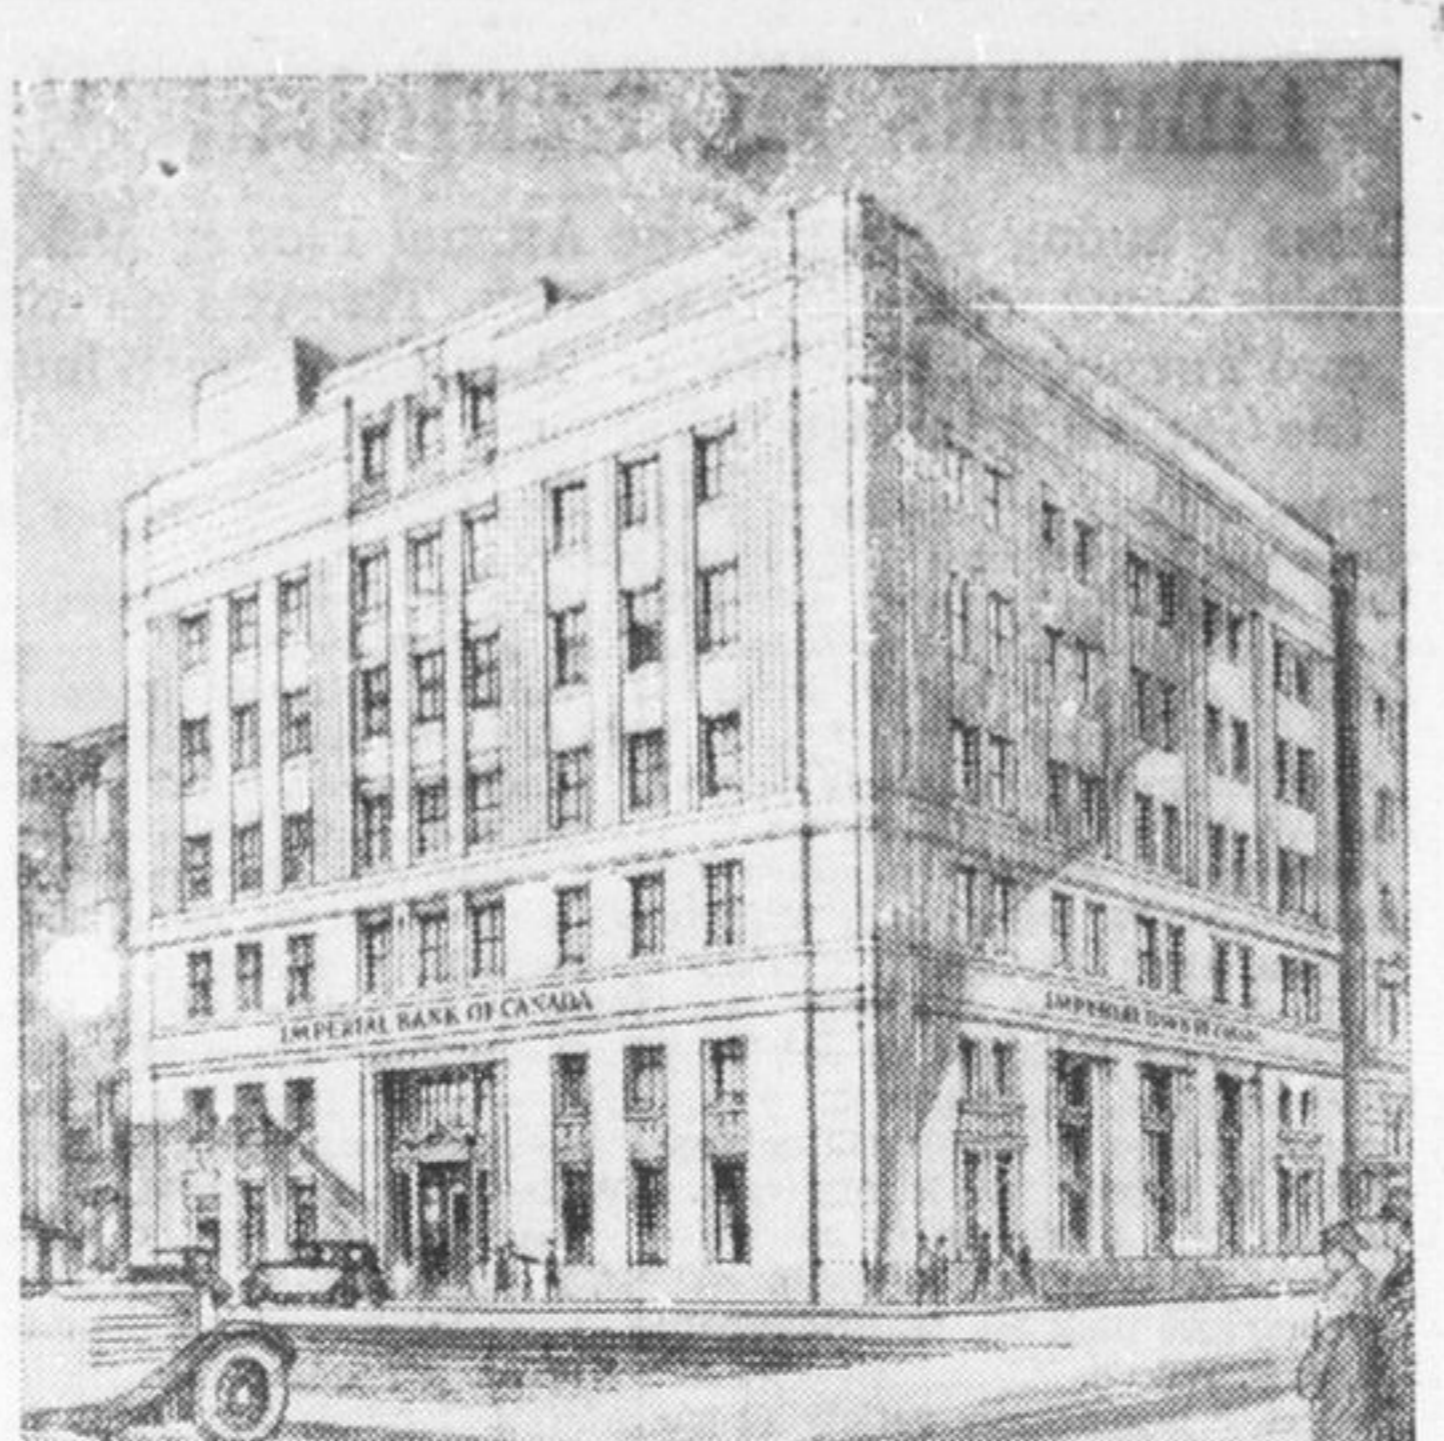

The premier said the hotel at Moosonee and the railway line from Cochrane to Moosonee would be closed, although the spur into Abitibi Canyon would be continued to bring supplies into the power plant.

"I don't know what will do with the hotel. The only thing I can think of would be to give it to the Indians," said Hon. Mr. Hepburn.

Questioned in regard to the appointment of Earl Hutchinson to the T. & N. O. the premier refused to either affirm or deny this report.

Mr. Hutchinson, like Hon. Peter Heenan, is a practical railroad man. When the legislature was not in session he drove a locomotive engine on

SHOWS CONFIDENCE IN THE FUTURE

Imperial Bank of Canada, through its general manager, A. E. Phipps, announce the construction of a new head office at King and Bay street, Toronto, replacing the present branch bank building on the southeast corner and the old building immediately east. The project has been mooted for some years and it was intimated proceeding with the work at this time was evidence that the directors are confident that economic uncertainties are now largely past.

The new building will have 100 feet frontage on King Street. The entrance to the main banking room will be on King Street, with entrance to elevators near the eastern end. A new feature in buildings of this type will be a complete air-conditioning system, which will maintain the proper temperature and humidity in every season of the year. The banking and office equipment, which will account for a substantial portion of the expenditure, will be the most modern that is consistent with sound practice. There will be pneumatic tubes connecting various departments and dictographs and telautographs will also be installed.

The main banking room will be a storey-and-a-half in height. Four upper floors will provide adequately for head office executive and staff. The sixth floor, of smaller area than the lower five floors, will be taken up with board room and ancillary space. Modern vaults and safety deposit equipment will be installed in the basement.

The C.P.R. from Fort William to Kenora. He was also prominent in the Railroad Brotherhood Union.

The premier said the Moosonee extension cost the province \$13,000,000 and the government was determined to find out who was responsible for such expenditure.

Exterior of the new building will be natural gray stone. The old building on the inner side of the site will be razed, but the five storey structure at the corner, which is of modern fire-proof, steel and concrete construction, will be utilized in so far as its frame and floors are concerned. The terra cotta exterior will be removed so that the whole structure will be an architectural entity.

Total cost, including equipment, will be something less than \$1,000,000, it was stated. Canadian materials and workmanship will be used. The architects are Sproatt & Rolph, structural engineers are Harkness & Hertzberg and H. H. Angus is consultant for the mechanical engineering details.

"The object of the Imperial Bank is to provide an adequate head office," said Mr. Phipps following a meeting of the directors. "We have been cramped here on Wellington street for some years and while we believe the new building architecturally will compare favourably with the best, we have not sought to be pretentious."

"There is no doubt that many projects have been delayed in the last three or four years because of the uncertainty as to the future," Mr. Phipps added. "Many people now believe that the major uncertainties have been dispelled and it can be hoped that filling by the commercial world of legitimate building needs will of itself help further to lift the depression."

Contracts will be let immediately and construction will begin as soon as tenants, now under three-months' notice, have vacated. Banking will continue during construction in the King and Bay branch.

Annual Meeting of Co-operative Store

Reports for Year Show Consumers' Co-operative Society Limited to be Making Notable Progress. Directors Re-elected.

It was with a feeling of pride that the manager and directors of the Consumers' Co-operative Society Ltd., at the annual general meeting of the society, reported to the members on the affairs for the fiscal year ended June 30th, 1934.

The year's sales were \$250,788.67, an increase of 60 per cent. over the previous year. The net profit on these sales was \$10,303.17. At the meeting it was decided to divide this profit as follows:— 5 per cent. for educational purposes; 20 per cent. to be set up as a general reserve; 3 per cent. interest to be paid on capital stock; the balance of the surplus to be distributed to the members and non-members dealing with the society— 3 per cent. to members on their total yearly purchases from the store (half in cash and half in share capital) 11 to non-members on their purchases.

Election of directors for the coming year took place, the following being re-elected to office:—Matt Kautto, A. Matson, and A. Heino.

The membership in the society now runs into the hundreds. Each year shows an increase over the previous year, a fact which proves the interest shown in a co-operative store in this community.

Having such a large membership, naturally, the annual meeting is quite an interesting event. It is the one time at least when the voice of the members is supreme. This year was no exception to the rule, a large number attended, although many found it impossible to be there. It is hoped that when the time for the next meeting comes along even a larger body will turn up.

More Ducks Than Hunters Reported in the District

Duck-shooting season opened on Saturday but not as many went out on the opening days as usual. This may be due to the longer season now obtaining, the open season for wild ducks and geese being from Sept. 1st to Dec. 15th. The fact that all the ducks have not yet come down from the North on their annual migration south may also have had its effect in keeping many from getting out in the early days of the season. As it was however, a number went to Frederickhouse Lake and other duck shooting centres, and varied fortune is reported from those returning. Some are inclined to think that the ducks are not so plentiful this year as yet, while others say that unlike most other years, this year there were more ducks than hunters. Last year it was said that the hunters were so many that there were more hunters than ducks.

What You Should Know About Houses A Weekly Feature Service Supplied to The Advance by Home Builders' Service Bureau, 177 Jarvis Street, Toronto 2

The following is the week's article on home-building and equipping as supplied by the Home Builders' Service Bureau:—

HEATING The value of adequate heating in the home can not be stressed too strongly, particularly when we consider that in very few districts in Canada is it possible to reduce the heating season below the average of seven or eight months.

For that period it is essential to family health and comfort to maintain, say, an inside temperature of seventy degrees and, to do this economically, the home owner should devote the greatest thought to his selection of a heating system, since he is the one who will have to pay the bills for maintenance. There is practically no other unit in the completed home that can prove more costly than a heating system unwise selected—nor will any other unit return greater constant dividends in health and comfort than a system that is chosen for its efficiency and economy of operation.

To-day's Home Builder Is Fortunate During the comparatively slack sales periods of the past three years, manufacturers and heating engineers have had the opportunity of studying the improvement of certain types of heating systems and of introducing revolutionary systems with which most prospective home builders are not acquainted as yet.

Because of this fact, the home builder of to-day is fortunate in having at his command a variety of systems from which to choose and a wealth of highly valuable experience upon which to call.

An outline of the systems available is given here for the purpose of clarifying your conception of the different types of heating, so that you may appreciate more clearly just what to expect.

Consult Reliable Sources Perhaps no better advice could be given than this:

Consult a reliable heating contractor who can readily suggest one or two of the more eligible systems without prejudice. Do not be influenced too strongly by previous experience since in some cases a theoretically sound system becomes a liability in practice only because of careless installation.

If the house is worth building, it is worth building properly—and no house can be built properly if false economy is forced in one of the most vital units—the heating system.

Your heating contractor is a specialist. He knows his business. Therefore have confidence in him and in his advice. But at the same time be sure you understand clearly exactly what you will have when the job is completed.

Improvement in Warm Air Heating The bad name, once deservedly or

otherwise, associated with warm air heating has been successfully eliminated through the great progress accomplished by research and practical engineers within the past two or three years.

In some respects this has been brought about by the much greater scope afforded the warm air system with the introduction of air conditioning in the home, a subject that is dealt with more fully under that heading.

One of the outstanding advantages of warm air heating—apart from its adaptability to combined air conditioning—is its immediate response to drafts and checks and its flexibility under all conditions. The air, warmed in the furnace, is distributed instantly to the various rooms through the system of conductor pipes and registers.

The introduction of forced circulation overcomes the former objection to "cold pipes," while improvements in design and lay-out have succeeded in saving some of the basement room that was at one time monopolized by the pipes.

Modern methods of construction have eliminated the infiltration of coal gas and ash from the combustion chamber to the heating chamber and thence into the conductor pipes. To-day's warm air heating system is more efficient, more economical and cleaner than at any time in the past.

Improvement in Warm Air Heating The bad name, once deservedly or

Indians Subject to Fish and Game Laws

Hereafter Indians to be Dealt with in Same Way as White Men in Connection with Fish and Game Laws.

According to announcement made by D. J. Taylor, deputy minister of Game and Fisheries, Toronto, in future Indian offenders against the fish and game laws of Ontario will receive the same punishment as a white man would be given for the same offence. Up to the present Indians have been more or less given immunity in regard to breaches of the fish and game laws, at least, in this North Country, though it has been understood that fish or game taken by Indians was to be for their own use only and not to sell to dealers or others. The announcement at Toronto will be adhered to by all officials in the future in the attempt to halt the traffic in moose meat which is said to be carried on in the North.

The deputy minister of game and fisheries is quoted as saying that reports made to him stated that Indians were shooting moose out of season and were selling it to butchers. "The Indian will get a square deal from the department, but if he breaks the law and we can punish him, he will be punished like any ordinary offender," said the deputy minister. At a time like that described by the deputy minister it seems an odd moment to discharge all the game wardens. However, it is understood that pressure has been brought to bear on the department and some of the game wardens are to be re-appointed, or more likely, others put in their places. Some of these are understood to be in the North Country. It is to be hoped for the sake of the conservation of fish and game that in this part of the North the services of a game warden are not dispensed with. Previous trial shows that it is impossible for the provincial police to do this work on the plan suggested by the department. The work of the game warden requires qualifications not likely to be found in the ordinary police officer. One of the chief qualifications is a thorough knowledge and experience in the bush. Officers of the provincial police soon acquire the ability to travel the bush districts in the cause of their ordinary police work, but this is vastly different to the intimate knowledge of the bush and its inhabitants required for the ideal game warden.

About the Making of Cheap Copper at Anxox, in B.C.

One of the perennially youthful mines of this Dominion is, it appears, the Granby, at Anxox, B.C. The latest major move in adjusting the copper smelting practice at Anxox to keep it abreast of the times is to separate the particles of copper ore from the barren rock by flotation after fine grinding, thus avoiding the expense of melting the barren material. The concentrate of fine particles, rich in copper, presented, however, another problem, which was promptly solved by the company's metallurgists.

The September bulletin of the Canadian Institute of Mining & Metallurgy contains a paper entitled "Smelting Practice at Anxox," by T. W. Cavers, metallurgist. This tells how the copper concentrate in the form of dust, is converted cheaply into blocks of a size suitable for charging into the blast-furnaces. The fuel required is provided largely by burning the sulphur that occurs with the copper in the ore, and a little lime is added to help the particles to fuse more readily into a porous mass, thus making it possible to speed up the machines and to give them a greater daily capacity. By this and similar economies have the Granby metallurgists succeeded in keeping their plant in operation even when the price of copper was at its lowest.

San Francisco Argonaut:—We get terribly tired of voting for the lesser of two evils every time and some day we'd like to have the chance to vote for the greater of two goods.

KEEPING THE T. & N. O. OUT OF THE POLITICAL FIELD

An editorial note in The Sudbury Star last week says:—"Unofficial reports indicate that Earl Hutchinson is to be made chairman of the T. & N. O. Railway or head of the Workmen's Compensation Board. It was Mr. Hutchinson who resigned as M.L.A. for Kenora to allow Hon. Peter Heenan, minister of lands and forests to gain a seat in the legislature. No one expected Mr. Hutchinson was resigning for love. Thus is politics kept out of appointments when a new government comes into power."

Legion Plans Free Toys for Children

Takes up System Used Last Year by Turkey Stag to Secure Christmas Toys for the Youngsters.

It will be remembered that last year "Lap" Laprairie, manager of the Turkey Stag, made arrangements with the Buckingham Tobacco Co. for the securing of a number of toys for children for Christmas to assure a happy time for the youngsters who otherwise would go without. A number of boxes were placed in prominent stores in the camp and into these boxes the covers of Buckingham cigarette packets were deposited. The Buckingham Co. gave toys in proportion to the number of covers deposited. While the tobacco company made the basis a very generous one, it was simply along the premium line, with the difference that instead of the smoker getting the premium himself he turned in his package covers so that the hearts of children were gladdened at Christmas time by the receipt of toys. The plan worked well with the Turkey Stag and a large number of toys of fine quality were received here. As a result of this effort and the good work of local people like the fire brigade, the lodges, societies and other organizations, it may be said that there was not a child in Timmins who missed Christmas joy.

This year the Canadian Legion has arranged with the Buckingham Co. to carry through the wrapper scheme and receive in return toys for the children. Smokers are asked to start now to save the wrappers and turn them in to the boxes that will be placed in prominent business places throughout the camp. This plan means the gladdening of the hearts of many children. Recent weather has been a reminder that winter is always in the offing and that Christmas never fails to come. Start now! Remember the Legion is in the plan now for supplying toys to youngsters at Christmas time, and do your part to help the Legion make the plan successful.

Sudbury Star:—Maybe a goldfish doesn't have any privacy, but is he any worse off than all the other fish, with Dr. Beebe scouting around?

Opening Smoker of Legion on Monday

Music to be a Feature with Al. Pierini's Orchestra in Attendance. Other Musical Numbers and All Other Usual Features.

Those returned men of the district who enjoy a real old soldiers' night will do well to drop in to the Oddfellows hall on Monday evening next, September 10th. It is the big opening night of the fall and winter season of the Timmins branch of the Canadian Legion.

All the members of the branch are asked to be in attendance, and to bring along their prospective members. It is said that all attending will have a real big time. Among the many items on a varied programme will be the first appearance of the fine musical aggregation of the district, namely Al. Pierini and his Vagabond Kings. This orchestra will render classical as well as dance selections. It is also expected that the members of the orchestra will give individual solos, etc. Another item said to be promised is the appearance of musicians not heard from before at these smokers. All the old Legion favourites will also be on hand. Smokes, etc., and crackers and cheese will be served during the evening.

It looks like a real good evening of musical enjoyment and all should try to be on hand to start the season right for the Canadian Legion in Timmins.

Ohio State Journal:—There isn't much practical advice to be given the hopeful young graduate this season, except to marry the first girl he finds who has a steady job.

REDUCING MADE HER LOOK YOUNGER

A Burden of Fat Gone

Here is another case where the trim, slim figure of youth has displaced the coarse, fat outline of middle age. It is a housekeeper writing. She says:—"I cannot say what weight I was but I was very fat—a burden to myself. I have taken three bottles of Kruschen Salts, and now I am quite slender. I am over 56, and people take me for 40. I am more than proud of myself. You can take it from me that every word of this is true. I took a teaspoonful of hot water every morning till I used three bottles. Now I only take half a teaspoonful each morning. I cannot recommend the Kruschen Salts enough for they are worth their weight in gold."—(Mrs.) A. H.

Kruschen Salts combat the cause of fat by assisting the internal organs to perform their functions properly—to throw off each day those waste products and poisons which, if allowed to accumulate, will be converted by the body's chemistry into fatty tissue.

TAKING YOUR Dollar TO MARKET EVERY year your family, and every family of your acquaintance, spends about 70 per cent. of its income just for living, exclusive of rent—so economic experts tell us. Think what this means—seven dollars out of every ten invested in food, clothing, household utilities and all the multitude of things that keep a family comfortable and happy. That part of spending is readily understood. But do you realize that every manufacturer and retailer of these necessities is planning how he can get your dollar? It's a big job to spend so much money wisely and well. It requires careful business methods to get the best possible returns from each dollar that leaves the family purse. The clever woman goes for help to the advertisements in her local paper. There she finds a directory of buying and selling. She learns about the offerings of merchants and business people. She compares values. She weighs quality and price. She takes this opportunity of judging and selecting almost everything she needs to feed, clothe, amuse, instruct and generally bring up her family. Do you read the advertisements? You will find them willing and able to serve you in the business of purchase. Advertisements are guardians of your pocketbook--read them carefully

FUN . . and health in every bottle The joys of school are enhanced a hundredfold when bodies are strong and minds are keen . . . MILK contains most of the health elements. Try— Timmins Dairy Phone 935 Timmins
