A WISE OLD OWL sat on an oak:
The more he saw, the less he spoke:
The less he spoke, the more he heard:
Just take a tip from this wise old bird:

Ten New Gold Mills to Start This Month

Young-Davidson, Paymaster, Munro Croesus, Among the Number Expected to be in Operation This Month.

Every month sees new gold mills turning over in Canada, says The Northern Miner last week, adding that higher gold price and well-directed effort is likely in the coming months to break all records for gold production in Canada.

The month of September will usher in ten new gold mills across Canada's gold mining front. Under the pervading influence of the higher gold price, the responsive Precambrian shield is yielding gold ore as never before, with the result that an unparalleled number of recovery plants are being installed this year. The Northern Miner computation for 1934 is 80 operating mills by the year end; it was 40 at the end of 1933 and 25 a year previous. In two years from the end of 1932 the number of production plants will have tripled.

The latest flock are of diversified sizes, treating diversified ore, occurring under entirely different conditions. It includes: McMillan, Paymaster, Croesus, Casey Summit, Lebel Oro, Young-Davidson, and North Shores in Ontario; McWatters and Thompson Cadillac in Quebec; Columario in British Columbia. No two are alike. In each case construction should be completed and the mill turned over according to official expectations at least by the end of September.

An impressive number of new mills have started up during the summer just past. They include: Central Patricia, 50 tons; Sullivan, 50 tons; Bidgood, 50 tons; Diana, 50 tons; Marbuan, 150 tons; J. M. Consolidated, 25 tons; St. Anthony, 125 tons; Montague, 75 tons; Island Lake, 50 tons.

An outstanding list of new mills have been officially announced and should be completed this fall or winter. They are Little Long Lac, Pickle-Crow, McKenzie Red Lake, Lamaque, Canadian Malartic, Ymir Yankee Girl, Matachewan Consolidated, Arntfield Gold, Dik Dik.

Young-Davidson

The Young-Davidson mill has a nominal capacity of 500 tons but till the metallurgy of the ore is actually experienced the true capacity will not be known; it may handle much more and it may handle less. The property is located in the Matachewan area and development has been due to the bold pioneer spirit of the Hollinger management, which company controls the project. An immense tonnage of the ore formation is available and it will be primarily a low cost operation. Thorough surface sampling across the big porphyry body yielded an average grade of around 11 oz. per ton, \$3.85 per ton at the \$35 gold price.

McWatters

The McWatters mill will have a 50-ton daily capacity for a couple of months then it will be stepped up to 100 tons daily. Over 50,000 tons is already blocked out according to the management above the first level and a grade of about \$20 per ton at present prices is looked for. The property is located in the south part of Rouyn township and it yielded on discovery one of the most spectacular surface shows in the north's history.

McMillan

The McMillan Gold Mines is breaking in a mill of 125 tons daily capacity. Official estimates show an indicated ore tonnage of 61,440 tons above the 625-ft. level with an average grade of 412 oz. per ton, \$14.40 at present gold prices. The estimate is considered conservative and if level exposures were assumed to go through to surface, a much larger tonnage would be indicated. Newer developments on the 625-ft. level are not included. The property is located 63 miles southwest of Sudbury.

Paymaster

The Paymaster mill will start off treating 100 tons daily at first. The property is located just west of the Dome and it has already produced over \$1,000,000 in gold in previous operations. The renewed work has resulted in developing ore at the Hetzke shaft to the extent of 32,000 tons of 21 oz. per ton grade. It does not include ore at the main West Dome shaft or in the old Paymaster ground.

Casey Summit

The Casey Summit at Casummit lake in the Patricia district is starting a 50-ton mill which is soon expected to reach 75 tons daily. Consistent ore has been drifted on two main levels, and a sub-level, together with surface exposure. A grade of ore approaching one ounce per ton is mentioned by the examining engineer. Raises are now being driven and a winze put down below the bottom level.

Thompson Cadillac

A 150-ton mill is being completed at Thompson Cadillac mine in Cadillac township Quebec. Official estimates outline 60,000 tons of ore with an average grade of 5 to 6 oz. per ton determined largely by bulk sampling and test runs. Work has been carried on the levels mainly to 600 ft. vertical depth.

Columario

The Columario mill of 75 tons capacity will be completed, with 100 tons possible with small additional cost. The management has estimated a grade of 80 oz. per ton and examining engineers have estimated 75,000 tons possible for development. Recent work has been done with this result that average grade was changed from 50 to 80 oz. per ton. The property is located near Usk in British Columbia.

Lebel Oro

The Lebel Oro mill has a daily capacity of 200 tons and it has been installed to treat tailings on the Long Lake property, eight miles southwest of Sudbury. The tailings, officially estimated to total 140,000 tons with an average grade of 09 oz. gold per ton, were left from previous production

From Girl to Boy

CLARA SCHRECKENGOST 20-year-old dwarf of Dayton, Pa., who has agreed to undergo an operation which surgeons believe will change her from a sickly girl to a normal, healthy boy.

operations which ceased in 1916. The property also has "ore in place" possibilities and exploratory work in that connection is proceeding.

Munro Croesus

The Croesus mill, now Munro Croesus with a daily capacity of 15 tons, has just started operating according to official report. No tonnage or grade estimates are available, but it will be recalled that very spectacular ore was encountered at this property, and it is generally regarded that some of it remains besides good chances for developing new measures. It has been variously credited with a gold production around \$500,000. The property is located in the Beatty-Munro area not far from the Talisman property, and possibly some ore from the latter will be treated in the Croesus mill.

North Shores

A 25-ton mill has been constructed on this property near Schreiber, Ontario. Some very high grade ore has been exposed in very narrow veins on surface and in adits. Shipments were made to smelters in 1932 totalling 149 tons of ore which yielded a value of \$14,167, computing gold at \$20.67 per ounce. Thorough channel and bulk sampling has been carried out both on surface and in the adits, so that officials feel this small mill is justified as a preliminary unit.

Good Progress Made at Central Temagami

Main Vein Traced Over 1000 Feet. Property Being Prepared for Proposed Drilling Campaign.

Officials of Temagami Gold Syndicate report that the four major veins located on its holdings comprising some 320 acres in the Temagami gold field, have been uncovered for a total length of 4,000 feet showing an average width of 32 feet. In view of the light overburden good progress has been experienced, revealing several well-mineralized ore bodies. Some few weeks ago it is said that a crew of men commenced operations on what will probably prove to be the main vein of the group, and it has been traced for over 1,000 feet and for a width of 30 feet. It is understood that considerable attention is being given to this find and to date it has been exposed for a substantial distance.

The property is said to be identical in nature to Manitoba and Eastern, Long Lac Adair and Cumpitau, which are all in close proximity and it is anticipated by officials that many important discoveries made on the adjacent groups will be extended to the Temagami holdings.

Assays from surface showings have given values up to \$3.50 on one of the major showings with heavily mineralized sulphides in evidence, and it is believed that this showing is a favorable sign of good ore values at depth. It is also reported that there are indications of an encouraging platinum content.

LIVES OF INJURED MINERS SAVED THROUGH PLANES

Aerial transport of sick and injured men to hospital plays an increasingly important part in the life of the Northern Quebec mining country, just as it has done in parts of Northern Ontario. Despite poor flying conditions, a trip to Blouin Lake and Siscoe was safely made by a Dominion Skyways plane recently, bringing to Youville hospital two miners who had been the victims of accidents. One of them had a broken ankle, the second was so severely injured that he was unconscious when picked up by plane, and it was only due to the prompt transport to the hospital that his life was saved.

Word this week from Thornloe, near New Liskeard, is to the effect that bears are molesting the cattle in that district.

District Officers of Health Required

Dismissal of These Officials Prove Hardship to the North and May be Cause of Serious Loss to Province.

The work of the District Medical Health Officers was not greatly advertised. They did their duty without blare of trumpets or unnecessary boasts. At the same time their dismissal points the fact that the present administration is jumping to conclusions without due consideration and investigation. When the dismissal of the District Health Officers was first mentioned, the excuse was made that they were not necessary, that municipalities had their own health officers and consequently the District Health Officers were no more than ornamental. The Advance pointed out that whatever the case might be in the South, the District Health Officers were very necessary for the North. Since then, however, there have been several complaints from Southern Ontario points in regard to the dismissal of the District Health Officers. Very evidently the officials in question were filling a need in the South just as they did in the North. It is likely that pressure will be brought to bear on the Government for the re-appointment of District Health Officers. It looks at present as if the Government would hold off for a while and then the appointments can be made of medical men favourable to the Hepburn administration. The advice may well be given the government not to delay the appointments too long or it may be that there will not be any medical men left who will be favourable to the Government. In the South it seems that the work of the District Health Officers has been worth more than it cost in the way of preventing general epidemics and dealing with unusual situations in regard to public health. Apart from a few of the larger cities the medical health officers are paid so little that they may be said to work for the community without fee. In case of any difficulty arising—a strange disease, the threat of an epidemic, etc.—the local medical health officers have had the District Health Officers to call upon for help and advice. In the South the dismissal of the District Health Officers has left a serious situation in many localities. It is not to the advantage of the public health. Indeed, it would appear that the dismissal of these officials has meant a big set-back to the progress of the movement for better public health and health protection.

If this is the case in the South, the situation is still more serious in the North. The Advance has been pointing out that only a few municipalities in the North have medical health officers. Even in these places the salary is so small that full attention can not be given the duties. In the North there is so much unorganized territory that the health of the whole North is endangered by the lack of medical supervision. Disease starting in unorganized territory is liable to cause epidemics that the organized municipalities will find difficulty in handling.

One such epidemic will wipe off many times the savings in money from the so-called economy of dismissing the District Health Officers. Add to that the danger to the lives of the people and there is no possible economy in having no District Health Officers.

The Advance has not been alone in protecting the dismissal of the District Health Officers. Other newspapers have taken similar stand, notably The North Bay Nugget and The Sudbury Star. To these may now be added The Sault Ste. Marie Star. The Sault Ste. Marie Star says that the elimination of the District Officers of Health throughout Northern Ontario can only be the result of entire ignorance of conditions there. In Algoma, for instance (and conditions are the same all through Northern Ontario), there is a great deal of unorganized territory, where there are no municipal councils, no board of health, no local medical health officers, no doctors. Even some towns lack doctors. East of the Sault there are six doctors and north of it two doctors. The rest of the district is without resident medical

men. True, doctors are called frequently to the outlying sections but in case of an epidemic of typhoid fever, of diphtheria, of measles, even of whooping cough, there is no one but the district officer of health to look after things. For the major portion of the district there is no one else to look after water supply and milk supply, always serious problems in unorganized sections.

The Latchford correspondent of The New Liskeard Speaker last week had the following item:—"Miss N. Graham, R.N., of New York, Miss F. Graham, R.N., of Timmins, and their brother, Ab Graham, of Schumacher, visited their cousin, T. Graham, and Mrs. Graham, recently."

WARRANT AUTHORIZING SALE OF LAND FOR TAXES

To the Treasurer of the Township of Whitney:
You are hereby commanded to levy upon the lands mentioned in the attached list for arrears of taxes due thereon, with your costs, pursuant to the provisions of the Assessment Act and Amendments, and according to law. For so doing this shall be your sufficient warrant and authority.

J. W. YOUNG,
Reeve, Township of Whitney
Dated at Porcupine this 18th day of July, 1934

New Settlers Making Good in Dugwal Area

Nine New Families Now Comfortably Settled in New Homes. Church Services Held at Dugwal.

Dugwal, Ont., Aug. 31st, 1934. Special to The Advance.

There are now nine settlers with their families comfortably settled in this new community. The last arrivals have been Mr. and Mrs. Winter, Mr. and Mrs. Wilson, Mr. and Mrs. Campbell, Mr. and Mrs. Hill, and Mr. and Mrs. Raymond. They are all putting forth an honest effort to make things go. At present they are gathering berries for winter use, and making the well-built log homes comfortable against winter. Having all come from Simcoe or Windsor, they are somewhat acquainted and working together in a very helpful and friendly way.

A first United Church service was held on Sunday, Aug. 26th, at 2.30 p.m., at the home of Mr. and Mrs. Barford, sixteen being present. During the service Rev. A. A. Jenner conducted the first baptismal service, the babe being James Craig Hill, son of Morgan P. Hill and Mrs. Hill, formerly of Simcoe. It is hoped a service may be arranged each second week. We wish these people every success.

Huntingdon Gleener:—If there is a grand championship for victims of auto accidents, George Hughey, Springfield, Mo., wants to lay claim to it. In the last five years George has been run over by cars five times, knocked down 17 times and struck by fenders or bumpers 30 times. Once he was "parked on" by a car. And yet he has not missed a day's work in all these five years. His day's work is painting street names on curbs for the city which exposes him to mishaps.

A Start to Success

A first step towards business success is a bank account. No business-like man or woman today can get along without a bank account.

Start with a savings account. Deposit a fixed proportion of income, however small, regularly and without fail, adjusting your expenses accordingly. This is a start to success, possibly to financial independence.

Interest is added to your savings on June 30th and December 31st in each year.
