Announcing Seven Gold Survey Areas in Ontario

Hon. W. A. Gordon Gives Areas in Ontario Where Dominion Geological Parties are to Work This Summer Under New Plan.

Word from Ottawa on Monday night said that Hon. W. A. Gordon, Minister of Mines in the Dominion Government, that evening disclosed Ontario areas in which the Dominion's geological survey will hunt this summer for ground that may hide gold, silver, oil or gas. Funds for exploration parties were provided in the Supplementary Public Works Construction Act that earmarked \$1,000,000 for such work all over Canada.

The act authorized the Government to send 30 of its 180 geological parties into Ontario, but the minister's announcement made no mention of the exact number of groups that would be needed in the province.

The surveys will be conducted in seven areas of Northern Ontario where possibilities exist of finding gold, silver and other minerals that might be prospected with profit by private enterprise. Search for extension of the petroleum and natural gas areas of Southern Ontario will be conducted in the vicinity of London.

The most easterly area in which the parties will work will be at the headwaters of the Montreal River, the most westerly between Red Lake and Woman Lake.

The announcement recalled Ontario production of gold last year was worth \$71,000,000 and said "maintenance of production and employment requires that there must be no let-up in the search for new sources of ore." In arranging the program, it added, "areas have been selected that are conveniently situated for economic development."

The minister explained natural gas was significant to Ontario by drawing attention to an annual production averaging \$4,500,000.

The statement described the seven Northern Ontario exploration areas in considerable detail.

"Lying between previously mapped regions at Red Lake and Woman Lake," it said, "an area of about 2,500 square miles extending north to the Berens River and unknown geologically will be examined for extensions of the favourable rocks, Keewatin, volcanics and associated sediments, in which the new gold mines of the region are being developed."

"Southeast of Woman Lake and north of Sioux Lookout and Hudson, an area of similar character, centred along the Paponga River and comprising 1,500 square miles, will be investigated fully. On the Attawapiskat River a large

area not even mapped geographically will be the subject of a geological reconnaissance because of favourable rocks for gold found in the vicinity of Port Hope, which extend along the Albany River into the unmapped territory.

"Farther east there will be a large undertaking in the geological examination and mapping of rock outcrops in a section of the clay belt which lies north of Oba and extends to Hearst and Kapuskasing. About 5,000 square miles are included in the selected area and a number of sub-parties will be required in the painstaking search for rock outcrops to discover the prospecting possibilities of this district where promising rocks for gold deposition are known to occur along some of the water routes, notably the Missinabi River.

"An area of 500 square miles on the headwaters of the Montreal River has been included in the projects and 1,500 square miles on the Aux Sables River, west of Sudbury, an area that is a blank so far as geological knowledge is concerned. Promising formations for gold are known to intersect the margins of both areas.

"The silver area is centred about 30 miles southwest of Port Arthur and Fort William and extends to the international boundary at Pigeon River. This district, immediately south of a well-known former silver producing area, is known to have a number of veins of the silver-bearing type. The investigation is to assemble such geological information as may be of assistance either in tracing extensions of known deposits or in guiding the search for new discoveries."

There should be special interest in this area in one or two of the sections mentioned above. Of course, all of them are important to the North and all here will wish for all of them the greatest of success and the hope that the summer's work will lead to important new finds as it may well do in any or all of the cases. But apart from the general hope for good results there should be special interest in the "geological examination and mapping of rock outcrops in a section of the clay belt which lies north of Oba and extends to Hearst and Kapuskasing."

Apart from the excitement created by reported rich gold finds in the Kapuskasing area, the discovery of gold in commercial quantities or even potentialities along this line well authenticated

Died To-day

VISCOUNT BYNG of Vimy, whose death at London, England, was reported this morning.

would prove again that the proper route for the trans-Canada highway is west from Cochrane and Hearst and Oba. The development of the country around Hearst and Oba and westward would fully justify the route of the highway through that area. Those who know the country claim that the potentialities are there all right. Government examination of the country under a definite plan such as has been outlined by Hon. Mr. Gordon would no doubt do much to confirm the opinion of prospectors and others who have no present means of proving their judgment in the matter.

There will also be very general approval of the fact that further geological work is to be done in the Red Lake area. The work in this district by the government geological parties will no doubt be very valuable to the advancement of the area.

Mail and Empire.—After going on for two years the New Deal is found to be wrong. But there were some millions of Americans who found it out before the United States Supreme Court.

Specials for FRIDAY and SATURDAY

Sundries

- Hospital Cotton39c

Fish and Game Club Remarkable Pictures

(Continued From Page One)

ill recently and although now well on the way to complete recovery, he is taking a month's holiday out of town. Mr. Todd gave a short review of the association's activities, since its inception in 1933 as separate from the Rod and Gun Club. The dam at Fredericton has been their great objective but now that this is complete they find that there is much more work the association can do. Prime among the suggested activities is the admittance of junior members at a fee of 25 cents. This has been under consideration for some time by Mr. Cossor, who has a plan through which school principals will be able to work.

Each junior member will have a badge or pin of some sort designating his membership. The boys will be taught the necessity of protecting fish and game and will be asked to keep their eyes open for offenders against the laws.

The financial statement presented showed members' fees, \$123; donations for work on the dam, \$453; making total receipts of \$576. Expenses were \$474.75, leaving a bank balance of \$101.25. This statement was presented by Mr. Brady and the accounts had been audited by H. E. Waddle. The association was, Mr. Brady remarked, in very good shape to carry on any further work that might be suggested.

TROUT FRY COMING SOON
"Make it ten!" said several members of the association when the secretary said he would like to retire and stated that he had been secretary for nine years. He agreed in the end to carry on for another year. He suggested that Craft Creek be made a sanctuary by the provincial government so that trout could be raised there. Something like 200,000 speckled trout fry are expected soon from the department, since an application has been accepted for that number. Revenues of the association go towards paying for trucks and boats to get pickerel and trout fry to the lakes and streams when they are shipped in by train from the South.

Remarkable Hudson's Bay Pictures
The showing of motion pictures by J. R. Todd and Stan Kitchen occupied the latter part of the meeting. Taken all the way from Timmins to far up the east coast of Hudson's Bay, the show was a remarkable vista of the North Country.

The east coast of the Bay pictures are perhaps the only ones of their kind in existence. They showed mile after mile of flat, treeless country, with only waving grass and an occasional broad river to vary the scene. Large islands all the way up the coast protect it from heavy storms.

Speckled trout, large and numerous enough to warm the heart of even the most disinterested fisherman, are in the rivers and streams along the coast. Action photos of Mr. Todd and others in the act of landing big ones were sure proof of the great sport to be had in the region.

Wild ducks, with their flocks of little ones, were seen near their nesting grounds on Northern rivers and lakes. "Now," said Mr. Todd, "you can see why you aren't allowed to shoot them till September 15th."

Grow Potatoes on "Barrens"
Though it looks like a sort of barren spot in the grassy plains of the North, crops of potatoes were seen and the

audience was told that they grow just as well there as they do here.

A cabin at Moosonee, used by local hunters in the duck season, was an interesting feature. Despite the absence of trees, the logs from which the cabin was built were straight and solid. The mystery of where they came from was solved when a photo of a whole valley full of logs, drifted in by the tide, was shown. They had been tossed far inland so that they had completely dried out and made ideal firewood or building material.

An old Norwegian hulk, cast up on the shore of Hudson's Bay 20 years ago, was another high spot of the unique entertainment.

Kapuskasing, Smooth Rock Falls and lakes and streams of the Porcupine district made another interesting series of pictures.

A reel of colour pictures, taken by E. H. King on May 6th of the great parade in Timmins, was the last to be shown. It covers the whole parade and was taken from the roof of St. Mary's hospital. As a record of the May 6th celebration, it is unequalled. The photography was excellent.

Humorist, London, England:—Many Hollywood film-stars have doubles to perform difficult feats in a film. It is denied, however, that one actress has a permanent double to pronounce all words over three syllables.

Monday Next the Tenth Anniversary United Church

Monday next, June 10, marks the end of the first decade of church union in Canada. On June 10, 1925, the United Church of Canada was inaugurated. Writing of the ten years that have passed, Principal Edmund H. Oliver of Saskatoon says that the United Church's first achievement is its survival. Considering the vastness of the venture of union, this may be taken as a distinct achievement. Then too, the United Church has grown in unity and fellowship, and its membership has increased from 600,522 to 687,973.

Since the general union, 642 home mission fields have been merged or re-arranged, 460 have come up to self-support, 151 have been discontinued because of changing conditions in the localities served, 398 have been accepted which were formerly self-supporting, mainly in the dried-out area, and 291 new fields have been opened. This makes a decrease of 605 home missions, and in itself is highly significant.

Having developed its working organization, the United Church may be expected to show even greater missionary achievement in the next ten years. Meanwhile the United churches of this district are holding their celebrations and taking a thankoffering.
