

## Mascioli Theatre, Schumacher

FRIDAY AND SATURDAY, APRIL 17TH AND 18TH  
JACK BENNY and ELEANOR POWELL in  
"BROADWAY MELODY OF 1936"

Midnight Show—Sunday April 19th—Playing Preview on  
"RED SALUTE"

MONDAY and TUESDAY, APRIL 20th and 21st  
BARBARA STANWYCK and ROBERT YOUNG in  
"RED SALUTE"

WEDNESDAY and THURSDAY, APRIL 22nd and 23rd  
MARGARET SULLIVAN and JAMES STEWART in  
"NEXT TIME WE LOVE"

FRIDAY and SATURDAY, APRIL 24th and 25th  
MARX BROTHERS in  
"A NIGHT AT THE OPERA"

### Death of Child Near Rouyn Held to be Accidental

A verdict of accidental death was returned by a jury at an inquest held last Wednesday evening on little Marion Menard, aged two years and eight months, who died in Youville Hospital, Noranda, on April 6 as a result of being scalded through falling into a pail of hot water at her home in Rousseau Township on March 19. The evidence heard before Coroner Dr. J. L. Bouille was that the little girl was playing with her brothers and sisters in the kitchen where her mother had left the pail with the intention of washing the floor when the accident happened. Nurse Gagnon brought the child to Youville Hospital, Noranda, where it lingered for several days. The parents, Mr. and Mrs. Albert Menard, are living in a settler's camp about 26 miles from La Sarre, in the Township of Rousseau.

### Falls Forty Feet at the Siscoe Mine and Breaks Leg

John Twit suffered a broken leg with body and facial bruises when he fell a distance of 40 feet down a slope at the Siscoe Mine. After being attended by Dr. Hope, the mine doctor, he was brought in by plane to Youville Hospital, Noranda, a Skysway machine, the Fairchild 71 piloted by Arthur Sims, flying out to the mine from the Rouyn base to bring in the injured man at 6 o'clock Saturday morning. The victim of the accident, who was attended at the hospital by Dr. E. W. Linklater, is reported to be doing well.

Waterloo Chronicle.—The world is never going to get better until children are an improvement on their parents.

Hanna Herald.—Of course, we wish for what we haven't got. What else is there to wish for?

### HE STANDS ALONE AS THE GREATEST ENTERTAINER OF MODERN TIMES!

### AIR HEROINE CAN SMILE NOW

MISS NELLIE GRANGER

Paint semblance of a smile lights up the face of Miss Nellie Granger, the hostess who played the heroine role in the recent aeroplane crash of a luxury airliner, as she poses in a Uniontown, Pa., hospital for her first picture following the tragic crash. Miss Granger, completely recovered from her experience, was one of three persons who luckily escaped death in the wreck which took the lives of 11 others. The other two, however, were reported near death. Miss Granger will be promoted to hostess of a crack transcontinental air flyer.

## Special Easter Events at Schumacher Churches

Music Featured at the Churches at Schumacher. Successful Easter Tea at the Teachers' Residence on Saturday. Other Items of News from Schumacher.

Schumacher, April 14th, 1936. Special to The Advance.

Miss B. Eddey, of Aylmer, Quebec, is visiting at the home of Mr. and Mrs. H. Brownlee, Third avenue.

Miss Audrey Ward, of Englehart, is visiting the home of her grandparents, Mr. and Mrs. W. J. Ward, for the Easter vacation.

Mr. B. Sprague and children left last week for a vacation in Windsor before joining his husband in the Central Patria mining area.

Mr. Stan Denison spent the weekend visiting his wife in Haileybury.

Mrs. Frank Bran, of Iroquois Falls, visited at the home of her sister, Mrs. F. Fairhurst, last week.

Cecil Robinson, who has been in Toronto for the past few weeks receiving medical treatment, arrived home last week.

Born—Sunday, April 12th, 1936, to Mr. and Mrs. Cecil Grant, First avenue—a son.

Miss A. Coleman, of the public school staff, is spending Easter at the home of her parents in Forster Falls.

Miss Elsie Henderson, Reg. No., who has been spending the past two months visiting in California and the Southern States, arrived home on Wednesday.

George Leck of the Omega Mine, Larder Lake, spent Sunday at his home.

On Monday evening, April the 20th the Young People's Society have invited the debaters in the recent debate in the high school, "Was Mussolini Justified in His Action in Ethiopia?" This was a very interesting debate and those who missed hearing it two weeks ago, will again have the opportunity to do so.

Sybil Wong arrived home from Haileybury to attend the funeral of her brother, Alex Wong.

Miss A. Dube, of Blind River, is the guest of her sister, Miss L. Dube, this week.

Mr. W. S. Blake, principal of the High School, is in Toronto this week attending the O.E.S.

Mr. Howard MacDonald, of Revelstoke, British Columbia, is visiting at the home of Mr. and Mrs. F. Skeene, Fourth avenue.

On Sunday afternoon the Young People's Society and the Sunday school held a joint meeting to present Mrs. Eayers (formerly Evelyn Leck) with a linen dinner cloth and china cups and

### Broke Triangle

MRS. BETTY MARTIN

Throwing patrons of a gay, crowded Chicago night club into a wild scramble, Mrs. Betty Martin, 32-year-old blonde, fired a fusillade of shots at her husband, Andrew, who, she said, was there with another woman. He died soon after at a Chicago hospital. "I wanted to fix him so he wouldn't treat other girls as he did me," Mrs. Martin sobbed in explaining the shooting which climaxed a whirlwind courtship and marriage that lasted just four months.

sacred, in appreciation of her work in the organization.

Miss Scully, of the High School staff, left Tuesday for Larder Lake, where she will be the guest of Mrs. W. O'Connell.

Miss H. Miller, of North Bay, is visiting at the home of her brother and brother-in-law, Mr. Miller and Mrs. Barker.

Art Williams, of the Darwin Mine, Northwestern Ontario, is visiting his family in town.

Mrs. McKinley of Conlaurum Mines

returned from Toronto on Saturday where she had spent the winter with her daughter, Mrs. Green.

Aubrey Robinson spent the Easter vacation with Mrs. Philper and Mrs. Greer in Sudbury.

Production at the Dome  
Higher for Month of March

Dome Mines Limited reports recovery of \$614,921 from 41,312 tons milled during March, with grade averaging \$14.87. Recovery in February was \$587,255 from 48,700 tons milled, grade averaging \$12.14, while in January recovery was \$58,435 from 44,500 tons, with grade averaging \$12.77.

For the first quarter of 1936 recovery was \$1,750,211 (or a yearly basis of \$7,000,844) from 132,512 tons of ore milled, giving an average grade of \$13.20. For the whole of 1935 recovery was valued at \$6,939,988 from 549,100 tons, with grade averaging \$12.64.

Government Helps  
the Mining Industry

Ore Dressing and Metallurgy Branch of Ottawa Dept. of Mines of Great Assistance.

The practical character of Canadian Government assistance to the mineral industry is revealed in a recently-issued report by the Department of Mines, Ottawa, giving an account of its investigations in ore dressing and metallurgy during the half-year period ending December 31, 1934. The close connection between laboratory test work and plant operation is evidenced in the results which attended investigations during the period on Canadian gold ores. These investigations led to the erection of 11 gold milling plants, four in British Columbia, one in Manitoba, three in Ontario, two in Quebec, and one in Nova Scotia. In British Columbia, a 50-ton cyanide plant was built at the Island Mountain property; a 100-ton cyanide plant at the Queen mine, (Sheep Creek Gold Mines, Limited); a 50-ton amalgamation-concentration plant at the Big Slide mine (Grange Mines, Limited); and a 100-ton cyanide-concentration plant at the Hedley-Mascot mine. In Manitoba, God's Lake Gold Mines erected a 150-ton cyanide plant. In Ontario, plants were erected on the Fox Lake Gold, Tashota Goldfields, and Wendigo properties. In Quebec, two 150-ton cyanide plants have been erected, one on the Arnfield property, and the other on the Canadian Malartic property. Bluenose Gold Mining Company in Nova Scotia erected a 50-ton amalgamation-concentration plant.

During the half year the results of 54 investigations were reported, 44 of which were on gold ore, four on non-metallic minerals, five on iron and steel products, and one on a special flotation agent. The latter investigation has resulted in the manufacture of the reagent, and its use by several gold properties operating flotation concentration plants. Twenty-seven reports were issued in printed form, which are included in the present report, and 27 typewritten reports were sent to those directly interested in the particular investigation. More than 12,000 chemical determinations were required for the 415 samples of ore, non-metallic minerals, and metallurgical test products resulting from the investigations.

Investigations on non-metallic minerals show that considerable work is being done on Canadian silica sands to extend their use for sand-blasting, the manufacture of glass, carbonium and other purposes.

Iron and steel investigations included special examinations and tests for the Department of National Defence and the Department of Public Works, and for the two railway companies.

The work in the ore dressing and metallurgical laboratories has proven of vital importance to mineral development in Canada and the present and past governments have spared no expense in providing the most up-to-date equipment. In the laboratories, ore treatment processes have been devised for practically 90 per cent of the gold milling plants that have entered production during the past quarter of a century. In addition, the work done on the ores of other metals and on non-metallic minerals has proven invaluable to the enterprises concerned. Company and consulting engineers are allowed full use of the laboratory facilities for the investigation of their problems. They have had the benefit of the knowledge and experience gained by the staff, by consultation, and by study of the reports issued. The milling plants are, therefore, designed for the most economical treatment of the ores.

Copies of the report, "Investigations in Ore Dressing and Metallurgy, July-December, 1934," which gives details of the various tests, may be obtained from the Director, Mines Branch, Department of Mines, Ottawa.

Kitchener Record.—The League of Nations should be given credit for bringing many of the international agreements and alliances out in the open. A thorough airing is good even for a living-room rug say the housewives.

## Northern Ontario Roads

### Protection During Spring 1936 Northern Development Area

Frost action in April and May causes road beds to get soft and readily subject to damage from traffic.

All trucks are limited to half loads and speed of 20 miles per hour. Horse-drawn vehicles capacity one ton, 250 lbs. per inch of tires.

The weight of loads and speed will be constantly checked.

Co-operation from truck and car owners is earnestly requested to prevent unlawful and unnecessary abuse of roads.

A. T. HAMER,  
Acting District Engineer

### That Body of Yours

By James W. Barton, M.D., Toronto

**Mastoiditis — Inflammation in the Bone Behind the Ear**

As youngsters, bragging about our fighting ability, the first asset was to have a big "muscle" on the upper right arm, and the second was to have a large "lump" of bone behind the ear. This lump, the sign of a good fighter, became known to us later as the "mastoid" bone. To it is attached the upper end of the large muscle you can see standing out on the neck when you turn your head; its lower end is attached to the bone forming upper part of chest. However this bone is not "solid" but is honeycombed with little cells or holes and when infection gets into these mastoid cells it is called mastoiditis or more commonly a mastoid. This is a very serious condition because these mastoid cells are very close to the brain. Thus when there is pain at the lower part or point of this bone, it is always a matter of deep concern to the physician.

In giving a simple explanation of the mastoid and mastoiditis, Dr. Louis T. Curry, Illinois Medical Society, in Hygeia makes these points:

1. The mastoid is the bony bump on the skull behind the ear.

2. In individuals who have not had ear disease, the mastoid is filled with cells or bony pockets. When there has been disease of the ear these pockets are blocked up.

3. The mastoid cells are part of the middle ear structure. Other parts of the middle ear are the tube running into it from the mouth to let air go against the inner side of the ear drum and the middle ear cavity inside the drum in which are located the three little bones which carry sound from the drum to the special part which receives the sound and carries it to the brain.

4. Mastoiditis is an inflammation of the mastoid cells and usually follows infection in the throat which infection has been carried up to the middle ear through the little tube above mentioned.

5. The seriousness of an infection of the mastoid arises from the fact that it lies close to large blood vessels and the brain itself.

6. Unless mastoiditis is relieved by surgery at the proper time it may extend to these blood vessels and to the brain and cause serious complication. Remember, then, that a physician should be called when there is pain behind the ear in cases where there has been throat and ear inflammation. (Registered in accordance with the Copyright Act.)
