

GRAHAM'S

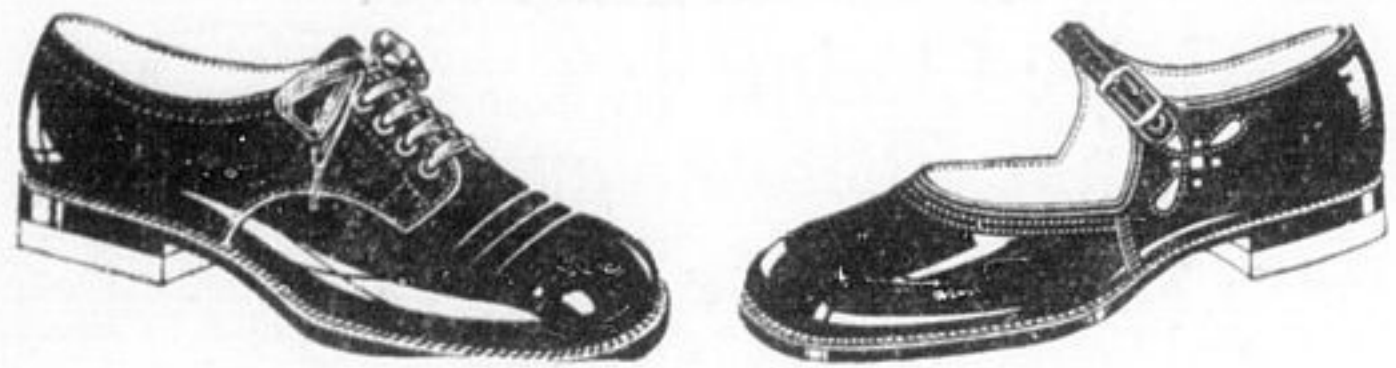

We Realize the Importance of fitting children correctly

Proper fitting shoes mean so much to your child's health and posture in later life that it is most unwise to take chances. Be sure their shoes fit perfectly - - - large enough to allow normal and healthy growth, yet snug enough to give proper support.

X-ray lets you see how they fit

Our special X-Ray machine, imported from England for this very purpose enables you to actually look right through the shoe and see exactly the position of the bones of the feet. This does away with all guess work and makes absolutely sure that your children's feet are perfectly cared for and comforted. There is no charge for this service.

To Refund Abitibi Hydro Power Bonds

Government Claims it will Save Four Millions by the Plan.

In the hope that a refunding operation can, during the next 15 and a half years, save the people of Ontario more than \$4,000,000 in interest payment, the Hydro-Electric Power Commission last week decided to call for redemption, April 1, 1937, the \$17,626,950 issue of Hydro bonds floated almost five years ago to purchase the Ontario Power Service Corporation bonds to the amount of \$20,000,000.

Hydro Chairman T. Stewart Lyon issued the following explanatory statement:

"The bonds issued on October 1, 1932, were for a period of 20 years, with a provision that the Commission shall be at liberty on any interest payment date to redeem the whole or any part of the debentures then outstanding at par plus accrued and unpaid interest upon giving at least three months' notice of redemption to the holders of the debentures to be redeemed.

"The Ontario Power Service bonds were issued to provide funds for the construction of the Abitibi Canyon

power development. The amount realized from them proved insufficient to complete that work, which thereafter was taken over by the province of Ontario, and the Hydro-Electric Power Commission of Ontario was appointed trustee to operate the property on behalf of the province.

"The Commission thereupon issued in its own name the debentures which are to be redeemed on April 1st next. The rate of interest upon these bonds was set at 3 1/2 per cent. from October 1, 1932, to October 1, 1937; 4 per cent. from October 1, 1937 to October 1, 1942; and 5 per cent. from October 1, 1942, to October 1, 1952. The total interest payment during this period would have been \$12,647,336.

"It is believed that a refunding issue can be made which, during the next 15 and a half years, will save the people of Ontario, whose agent in this matter is Hydro-Electric Power Commission of Ontario, slightly over \$4,000,000 in interest payments.

"Proper notice of redemption will be sent in due course to the holders of registered bonds individually, and by newspaper advertisements to the holders of unregistered bonds. These notices will be sent out at least three months prior to the date fixed for redemption."

Amalgamation of Larder Lake Claims

Fernland Gold Mines to Develop Promising Group of Mining Claims.

Under the name of Fernland Gold Mines, Ltd., an Ontario company capitalized at 3,000,000 shares of \$1.00 par value, a large group of patented claims in the Larder Lake mining area has been recently amalgamated. The property immediately adjoins the claims of Omega Gold Mines on the east. All of the claims were staked during the Larder Lake rush which preceded the discovery of Kirkland Lake area. Some of the recordings of the Fernland claims show the years 1906 and 1907 as the dates of staking. While considerable surface work was done by the various owners, the properties were not developed by shafts, but the present owners believe that the success of Omega in the typical conditions of the belt and the influence of \$35 gold have brought the properties into a most favourable position for development.

The amalgamation was effected after considerable negotiation by Howard J. Jewell, M.E., formerly field man for Noranda Mines Limited, which company conducted an extensive examination of the Omega and associated deposits. George Tough, who has been interested in one of the claim groups for a number of years and J. W. McKay, formerly of Cobalt, carried on negotiations with the heirs of Milton Carr, one of the first men in the North to send prospectors into the Larder Lake field.

The property consists of 444 acres or 13 claims in McVittie township, part of which is on the line of strike of the producing veins of Omega Gold Mines, and with the same geological conditions. Percy Hopkins, in his description of the area for the Ontario Department of Mines, mentions the vein on the Johnston claim. This is the most important find made to date on this group, surface work having disclosed a vein which averages between \$6 and \$7 (new price of gold) for five to seven feet in width. This vein has been traced for about 700 feet with a possible length on the property of 4000 feet. Several other veins or outcroppings of vein material have been found on the different claims belonging to this group in the early days of the Larder Lake section and these showed good values. These veins will be opened up and sampled as with the new price of gold some of these finds may be commercial grade.

The Kirkland Lake-Rouyn highway runs through the property as does the Nipissing Central Railway and the Hydro Electric Power lines. Power is available on contract at \$32.00 per horsepower.

The amalgamation involved claims owned by Johnston, Fernholm, Magnuson, Tough-Thib, Milton Carr estate, Ben Carr, Beauland and Jewell.

Preliminary surface work is proceeding under the direction of John Magnuson, one of the owners, who has had new camps erected on the Larder Lake road.

The permanent board of directors will be elected at an early date and will include a number of the present owners of the property.

Good Results from the Drilling at Golden Gate

Drifting on the 200-foot level at the Kirkland Lake property of Golden Gate Mining Company is making good progress according to official word from the North. The 202 drift has now advanced for a distance of approximately 60 feet with high values in gold persisting. The body of ore was previously intersected in a crosscut which is being driven to intersect a high-grade discovery opened up on surface some 200 feet from the mine opening. The crosscut to this vein is steadily progressing.

Officials further state that diamond drilling on the 350-foot level intersected favourable conditions and drilling will now be undertaken from the upper levels. It is proposed to put a drill hole out to determine the exact location of the indicated vein on the 200-foot horizon and drill additional holes to intersect other ore bodies.

Should Give Land-Clearing Bonus a Trial in North

An editorial last week in The Halleyburian considers the suggestion of The Advance that the government should replace the present direct relief to the settlers with a plan of land-clearing bonus similar to the one now in force in Quebec. The Halleyburian takes the question up in thoughtful way, the editorial in full being as follows:

"While the majority of citizens of the North are aware that there is a serious problem facing the settlers on farms, it is perhaps not generally known that there are at the present time three thousand heads of families, actually receiving relief from the government. This represents approximately 15,000 people who cannot take care of themselves, right in the districts of Temiskaming and Cochrane. The figures were supplied last week to The Porcupine Advance by T. B. Ryan, inspector for the Department of Welfare. These three thousand families are comparatively new settlers who have not had time or opportunity to bring their farm improvements to a stage where they can live without outside assistance. They receive regular assistance from the department, but it is claimed to be so small that a great many of them are losing hope of ever bettering their circumstances and are fast reaching the stage where they are ready to give up. Many authorities, including the newspaper which has supplied the figures are convinced that there is a remedy in a land-clearing bonus. This plan has been adopted in the neighbouring province of Quebec and has been advocated for Northern Ontario for a considerable period, but governments, both past and present, have fought shy of it. They have apparently been content to let matters slide, take care of those who are in danger of starvation and dodge the greater issue of what is to be the eventual outcome. The relief system makes no provision for the future, and so long as no substitute for it is found, just so long will a large percentage of our settlers on the land be forced to look upon themselves as objects of charity. The land-clearing bonus would, it is believed, gain two definite ends. It would eliminate the present relief system insofar as actual settlers are concerned, and it would at the same time provide the opportunity of making these settlers independent in the future. We do not know how long the bonus would be required, but it seems as though a definite amount of clearing could be decided on that would give the settler a sufficient start to become self-supporting. It is believed that it would cost no more than the present relief, and it is certain that it would prove a far more satisfactory system. It would give settlers a different viewpoint, something to strive for, and a welcome change from their present plight. It certainly should be given a trial."

Good Progress in Shaft Sinking at the Blue Star

Field advice is to the effect that with the surface plant at Blue Star Mines operating efficiently good progress is being made with shaft sinking to the immediate objective at 150 feet, where drifting is to be started on the Nos. 1 and 2 veins, which on the surface about 50 feet apart. Systematic sampling of these occurrences on surface yielded good gold values with some sections showing high-grade. Drifting on both veins will be commenced immediately following the establishing of the station at the above horizon. In addition there are four other parallel veins within a width of 500 feet in this section of the property.

High-Grade Zone at the Rahill Red Lake Mines

With one high-grade zone opened up on the southeast group of Rahill Red Lake and the extension of the Gold Eagle ore zone proven for at least 300 feet on the northwest group, officials of the company are completing plans for the immediate commencement of an advanced development campaign on both properties. Considerable surface exploration and diamond drilling has been carried out to date in addition to a thorough geological survey of the claims. Sufficient information has now been obtained, it is reported, to economically carry out the proposed advanced campaign of development work.

Red Lake Gold Shore Mine to Pour First Brick, Sept. 15

Pouring of the first gold brick at the Red Lake Gold Shore Mines is scheduled for September 15.

This was revealed by Dr. R. W. Breuls, secretary-treasurer of the company, after a visit to the property. He said that the tuning up of the mine's new mill is going forward smoothly.

While the mill is designed to handle 125 tons daily, it is expected that after the machinery has been sufficiently run in the plant it will be able to handle in excess of this figure. Official thought runs to 140 tons daily.

Slope preparation to ensure an uninterrupted flow of millfeed has progressed to the point where all levels have been box-holed, and are in shape to supply ore. Recently, in an effort to open up some lower grade ore to put through the mill during the tuning-up period, two box holes were cut at the north end of the 550-foot level drift. Instead of proving low grade as expected, the box-hole sampling showed ore running better than an ounce, and increased the known ore length by some 40 feet.

Literary Digest:—Sweep out—An ex-convict suspected of larceny, swept his way out of a Chicago jail by nonchalantly picking up a janitor's broom and using it. Watchmen thought he worked there.

Electric Line Work at Polaris Finished

Field Work of Geological Survey Also Completed. Further Work in Progress

H. McMaster, resident engineer of Polaris Gold Mines (Canada) Limited, reported on Friday: "Field work of the geological survey of Polaris is now complete and the plans which were finished to-day will be forwarded immediately to the head office at Toronto of Mining Research Corporation, Limited, the managers of the property, for correlation of geological relationship, preparatory to further diamond drilling."

"It has not yet been decided whether dewatering of the shaft will be proceeded with previous to a further diamond drilling campaign but this will be decided shortly. Work on the electric line was completed to-day."

Special Excursion to the Ottawa Valley

Cent-a-Mile Rate from Timmins for the Week-end of Sept. 17th to 19th.

Back to the Valley—home to thousands of people in the North—will be possible at a low cost for the week-end of September 17th, 18th and 19th through a cent-a-mile excursion of the T. & N. O. and C.P.R.

Pembroke, Renfrew, Arnprior, Ottawa, Montreal, Quebec and all intermediate points are included in the announcement of the bargain rate trip. Passengers may leave here on the 1.30 train on Thursday and arrive here again at five o'clock Monday afternoon.

If YOU CAN IMAGINE.

the radiance of a dew drop animated by the rays of the early morning sun, you will partially know the exquisite brilliance that flames in a Bluebird Registered Diamond. These finest of diamonds, certified perfect, are now on display.

Espanola Tenants Sued by the Abitibi

Company Says Tenants Owe Over \$1,000. Defendants Hold "Everything was a Free" When They Were on Relief.

The Abitibi Power and Paper Co. is suing a number of tenants at Espanola for rent, water, light and merchandise arrears totalling thousands of dollars. The company says that the suits were only entered after all other methods of collection failed, and in cases only where the tenants made no attempt at all to settle. The company says it was ready to accept greatly reduced amounts in settlement, but that in the cases where no effort was made to settle there was nothing else to do but enter the suits. In the cases where a defence is entered the suits will be heard by Judge Proulx in district court in October. The contention of some of the tenants is that an agreement was made or understood between tenants and company that so long as the tenants were not working they would not be required to pay. The answer of the company is that they know of no such agreement, written or implied. Judgment has already been given in one case, the tenant failing to put in a defence and the company being awarded the full amount asked, \$1498. In another case, the tenant in his defence admits that he was working for 15 months of the period covered by the account. He holds, however, that an agreement made with a former superintendent of the Abitibi was to the effect that while tenants were not working and on relief they were not liable for rent, water or the use of electric power and light.

Ladies Begin Play for New Golf Trophy

Miss Joy Wookey Leads in First Week's Play for Cup Presented by Mrs. H. S. Robinson.

Low score in the first round of the Robinson Handicap trophy, played at the Timmins Golf club on Friday went to Miss Joy Wookey. The new trophy, presented to the club by Mrs. H. S. Robinson, of Schumacher, is to be won by the golfer having the best score in four weeks of medal play. A silver spoon competition, being run at the same time for those who play nine holes, was led on Friday by Mrs. N. J. Leaman. Sixteen are entered for the Robinson trophy and 12 in the 9-hole. A C.L.G.U. competition, also played on Friday, was won by Mrs. York in the first flight, Miss Wookey in the second flight and Mrs. Leaman in the nine-hole flight.

Good Scores Made at Timmins Gun Club

Approach of Duck Shooting Season Makes Interest Jeener in Weekly Competition.

As the duck shooting season approaches, interest at the Timmins Gun Club heightens. There's no better way of getting in practice than firing 50 shots or so on a Wednesday evening at the clay pigeons, the members believe. A number of good scores were turned in at last week's meet, and although Stanlak had 21 out of 25 in his first round, Charlie Surman did more consistent shooting, with an average of 18 for three rounds.

Following are the scores:

H. Herman	7	10	11
W. Booth	8	—	—
Taylor	9	10	—
C. Surman	18	19	17
Easterbrooke	14	—	—
P. Aylett	16	17	—
Starlake	21	13	18
A. Young	16	12	18
