the debtor company and to the bankruptcy.

W. J. Hanley, appearing on behalf of Mrs. L. Theriau, a shareholder, spoke in support of the motion. He said he did not suggest there was anything wrong but it looked on the surface as if the shareholders were being ousted from their rights. Two of the inspectors of the assets, counsel believed, were interested as claimants.

The property, counsel continued, consisted of 270 acres in Siscoe area, near Sigma, Siscoe and Lamaque mines. A million shares had been sold to the public.

Justice McEvoy: "What can I do?" Counsel: "Direct that a meeting of shareholders be called."

"That's beyond my powers," said his lordship.

Benjamin Luxemburg, appearing for Guaranty Trust Co., said that a lot of unfair insinuations had been made and cited several paragraphs of the affidavit. The trustee-in-bankruptcy, he said, was willing to co-operate in any way provided that full duty to creditors be done.

Replying to the court, Mr. Porter said the company's debt was about \$40,000.

Pamour Expanding to 1500 Tons a Day

Splendid Profits Indicated for 1938.

(From Northern Miner)

Millheads at Pamour Porcupine Mines since the first of the year have averaged \$8 per ton. Gold production for all 1937 should readily exceed two million dollars in value. The Northern Miner can say after visiting this remarkable mine.

Recovery for the third quarter totalled \$574,305 from 72,400 tons. Mill tonnage averaged 787 tons daily and recovery ran \$7.93 per ton.

The mill is currently treating 800 tons daily on the average and extraction is up to over 92 per cent. In February the mill will be increased to 1,500 tons daily and all equipment for the increase except the ball mill will be ready in December.

The massive shaft headframe has been erected to a total height of 160 ft., housing an 850-ton ore bin and including 430 tons of structural steel.

The main conglomerate orebody has seven stopes at 225-ft. centres on the 400 level east of the shaft. This orebody takes 30 degrees east so the first two stopes do not show ore on the level. The ore is 50 to 60 ft. wide and the last two stopes are not as good grade as the others. The first four stopes are being mined, the fifth silled and the other two are not touched.

On the 600 level, the east drive is about 250 ft. into this orebody.

Surface diamond drilling west of the shaft has been completed at 200-ft. intervals over to the west boundary. Many ore sections have been cut, some very good, but no attempt has been made to correlate these indications into bodies. Two exploration drives have been driven some distance west on the 400 and 600 levels but exhaustive flat drilling has not started yet.

The big shaft has been sunk to 1,050 ft. depth on the way down to an ultimate objective of 1,600 ft. Intermediate levels will probably be made at 800, 1,200 and 1,600 ft. from which a large programme of depth drill exploration will be carried on. The shaft programme is a big job in itself as large stations, ore passes, loading pockets and crusher station have to be cut out on the way down.

Currently operating 45 drill machines, 22 on development and five in the shaft, work is being carried on a scale commensurate with double or three times the present production rate. Pamour has large areas to deal with, a mile east of the shaft and a mile and a quarter west, so big trunk drives are necessitated on each level in both directions. The property is being explored and developed with the thought of much greater production looking many years ahead.

The rapidity with which Pamour has come into being and become established on a profitable big tonnage basis, reflects great credit on the management staff and the sponsors, Noranda Mines. First milling started in May, 1936, and in less than two years production at 1,500 tons daily will have been established. Pamour is already a big gold mine carrying the promise of still greater future. Ore occurrence has been in-

terrupted at intervals clear across the property, two and a quarter miles from east to west. The giant programme of exploration and development planned on the new levels will decide how far production can be expanded beyond the 1938 rate.

Production has come so fast at Pamour that development has been far out of proportion to production, but at 1,500 tons daily a more reasonable balance will be given. All the costly work of shaft sinking and trunk drives are being absorbed in current operations.

When the mill is increased grade will probably come down somewhat as Pamour can make plenty of money in a balanced operation at 1,500 tons daily with recovery running between \$6 and \$7 per ton. Production so far has come largely from the main orebody and it would be expected that known lower grade orebodies will be developed and worked more intensively at the higher rating.

In the first half of the year operating costs averaged under \$4 per ton, which should be substantially improved next year. Pamour should make exceedingly good profits through 1938.

Under Life Sentence, but Given 6 Additional Months

Kingston, Nov. 30 (Special)—Already serving a life sentence for attempted murder, Pasquella Ferratti, 36-year-old Italian, today was sentenced to serve "six additional months" for getting drunk and assaulting a prison steward. "He did not knock me down, but my head rang for a week," Assistant Steward Frank Ellis told Magistrate Am-

brose Shea. Ellis, who is in charge of the vegetable cellar at the big prison, said he had found a pail of brewmast hidden among the potatoes and carrots. Ferratti considerably intoxicated, came along just as the discovery was made and swung at Ellis with a powerful right fist. Ferratti told the court he had obtained the "home brew from some one else," but that he had drunk "plenty"

Injunction Extended Against Trust Firm

Counsel Granted Until Today to Complete Examination in Gale Gold Mines Ltd. Case

Many in Timmins and district are directly or indirectly interested in Gale Gold Mines Ltd., and so will be interested in the following from The Toronto Star of Monday evening this week:—

Injunction Extended

Mr. Justice McEvoy, in bankruptcy court at Osgoode Hall, granted a motion of D. H. Porter for a continuance of an injunction to restrain the Guaranty Trust Co. of Canada, trustee in bankruptcy, from disposing of the assets of Gale Gold Mines Ltd. The stay was granted until Thursday to permit counsel for appellant, E. E. Sheppard, railway conductor at North Bay, to complete an examination of Albert Pelzer, Windsor, secretary-treasurer of Gale Gold Mines and Onesime Paquette, underwriter. It was the second extension of the injunction.

Mr. Porter placed before the court Sheppard's affidavit alleging interlocking interests of the mine directors and the mine's stock underwriters.

It alleged that part of the debt of the company consists of \$20,000, advanced by Victor Atto and that the advance was not made fully on his own behalf but that the advances were: John Blake, \$5000; Alfred J. Garska, \$5000; Jack Gagnon, \$5000, and Victor Atto, \$5000.

At the time the advances were made appellant claimed Blake, Garska and Mosso were directors of Gale Gold Mines Ltd., and at the same time were associated with Onesime Paquette, who undertook by agreement to underwrite a large block of the stock.

"I believe," the affidavit continues, "that an attempt is being made by persons who are directors of Gale Gold Mines Ltd., at the same time as being interested in the underwritings, and also in the largest creditor's claim, and who clearly have the control of the trustee-in-bankruptcy and the inspectors, to dispose of the mining claims of the said company at the expense of myself and other shareholders of the company."

"Unless the sales proceedings are delayed to give an opportunity for full investigation, I believe that the shareholders of Gale Gold Mines Ltd., including myself, will suffer serious loss."

"In order to make full inquiry into the matter referred to in this affidavit, I think that Pelzer and Paquette should both be fully examined on their knowledge of all matters pertaining to
