## Hon. W. J. Asselstine Good Choice as Minister in B.C.

An editorial last week in The Penton Herald, of Penitonia, British Columbia, makes reference to the new Minister of Mines for the far west province. The new Minister, Hon. W. J. Asselstine, was in the Porcupine in the early days of the camp, and has many friends here among the old-timers. The Penton Herald says:—"No better choice could have been made by Premier T. D. Pattullo than W. J. Asselstine for B.C. minister of mines. The member for Atlin has had a wide experience in mining engineering and his work has taken him to many of the mineral fields of British Columbia. He is regarded as a man of firm, sensible views and will undoubtedly adopt policies designed to develop the mining industry, aid the prospector and legitimate claim owner yet put a stop to improper exploitation and skulduggery.

"Appointment of Mr. Asselstine to the portfolio of trade and commerce in addition to the post of head of the mines department may come as a slight surprise.

"It was assumed that Hon. Mr. Pearson, former mines minister, would hold the trades and commerce portfolio as well as that of labour, but Mr. Pearson now takes over railways from the premier, as well as continuing with fisheries. The premier is relieved of the detail of the railway department and Mr. Pearson, one of the best men of the

House, will handle it in addition to his important job of conducting labor matters.

"Hon. Mr. Asselstine, the new mines trade and commerce minister is no stranger to this part of the province. He recently installed a cyanide plant for the Osoyoos mine and had somewhat similar work for the Mascot and Gold Mountain mines at Hedley, as well as for the Minto and Vidette properties. We do not expect that the minister should give us favoured treatment merely because he knows us, but it helps a good deal when he understands the particular problems of this section of the province.

"Fruit growers should be interested in the fact that he is trade and commerce minister for B.C. He has been in the Southern Okanagan and Similkameen long enough to understand some of the difficulties of the fruit producers and may be expected to lend a sympathetic ear to their plans for increased marketing.

"As member for Atlin, which borders on the Yukon, he may play a considerable part if and when Yukon territory is joined to British Columbia. Such a union has some significance for the Okanagan, because before many years through B.C. from the United States to Alaska. Whether the official road starts from the Pacific highway at Blaine or proceeds north through the Interior, it is certain that will eventually be a tremendous flow of traffic up and down the Okanagan between Alaska and the United States. Mr. Asselstine, if he remains as a member of the B.C. government during the intervening years, may be expected to have a prominent share in development of this character. He is interested in the Far North and he is interested in the southern dry belt.

It is worthy of note that about three months ago the Similkameen Liberal Association adopted a resolution pressing for the appointment of Mr. Asselstine to a separate portfolio of mines. His worth had been recognized in this district.

## Commercial Production of Refined Antimony

The first commercial production of refined antimony in Canada will take place within the next few months, according to a despatch from the Department of Mines and Resources, Ottawa. The metal will be produced by Consolidated Mining and Smelting Company of Canada in its antimony refinery at Trail, B.C., the erection of which is nearing completion.

The despatch advises that small quantities occur in the silver-cobalt-nickel-arsenic ores, which are treated at Deloro, Ont., and are shipped abroad for further treatment, but that no payment is received for the metal. Other than this, except for small experimental shipments between 1925 and 1931, there has been no production of antimony in Canada since 1917 when there was an output of 361 tons of the ore, valued at \$22,000. Antimony ores, and refined antimony were produced intermittently in small lots in the Maritime provinces for several years prior to 1917.

The plant at Trail will treat fine dust residues from the company's silver refinery, and is designed to handle 10 tons of these residues daily. Stocked dust will comprise 60 per cent. of the charge until the piles have been depleted. Expectations are that in excess of 1,400 tons of refined antimony a year will be produced, which amount is about double that of Canada's annual imports of the metal. The development is timely owing to the difficulties that many countries are experiencing in obtaining adequate supplies of antimony from China, which in 1933 supplied 53 per cent. of the total world output of the metal.

Another company, incorporated recently in British Columbia, has made arrangements for the production of antimony from the gold-antimony ores of some of the properties in the Bridge River area in that province. However, details as to the company's plans are not available as yet.

## Veteran School Principal in Favour of Home Work

Halleybury, Jan. 6.—(Special to The Advance)—J. H. McFarlane, retired principal of Halleybury public school and a veteran of 50 years in the teaching profession, told fellow diners at a complimentary banquet tendered him here Monday night to commemorate his jubilee, that he did not altogether favour the present-day trend toward doing away with homework for pupils. In his opinion, a reasonable amount of such study helps "to preserve the link between the school and the home," and was always a benefit to the pupils themselves. The modern system of education in Ontario, Mr. McFarlane thought, was not all it might be and did not impress him as being an improvement over former methods.

Mr. McFarlane retired from active work in his profession five years ago and since then has continued to make his home here. He began teaching, he told the gathering, on January 3, 1888, when 43 pupils turned out the first morning at the school in Elphin, Ont., where he received a salary of \$200 for his work the first year. On behalf of his friends here, Mr. McFarlane was presented with a silver tea set, H. A. Day, former town clerk of Halleybury, making the presentation on behalf of the assembled company.

Bowmanville Statesman: Resolve to say less. It is just as easy to talk like a philosopher as to act like a fool.

## Paymaster Output Makes New Record

Best Year Since the Start of Milling in 1934

Production at Paymaster Consolidated Mines, Porcupine district, for the year 1933, was the best since commencement of milling in 1934. Output was \$1,267,392 from treatment of 170,298 tons, an average recovery of \$7.44 per ton. In 1932 production was \$976,618 from treatment of 140,961 tons, for average recovery of \$6.92.

Company finished 1933 by establishing a new monthly production record in December, output being \$115,163 from 14,902 tons, an average recovery of \$7.72. This compares with production of \$111,929 from 15,415 tons, and average recovery of \$7.26 in November.

Total production since commencement of milling operations on Sept. 24, 1934, amounts to \$2,880,608 from treatment of 404,929 tons for average recovery of \$7.11.

## Signs Hopeful for the New Year in the Dominion

(From The Globe and Mail)

With such a picture as is portrayed in The Globe and Mail's Financial Survey, published today, Canadians will find it hard to doubt the immediate future. The progress recorded in varied line of activities has been of a stable character, with an absence of over-optimism or the artificial stimulation which brings reaction. Even the two industries which have failed to keep step with the general trend, agriculture and building, are by no means discouraging. Hon. James G. Gardiner is out in his review that while the value of 1937 crops has been 10 per cent. below that of 1936 it exceeded the returns for any previous year since 1930. Considering the effects of the Western drought, this is better than might have been expected. With fair Western crops, always to be anticipated, the railway situation would have been materially improved, and the Presidents of the two systems remain hopeful. MacLean's Building Reports shows that construction has gained 37.8 per cent. in the country and 35.6 in Ontario. The total value of contracts awarded, \$224,000,000, is substantial, although leaving much room for improvement.

Under favourable conditions the possibilities remaining here are great. It would be folly, of course, to make predictions, but the inherent vitality of major industries cannot be disregarded.

Hon. W. D. Euler, Minister of Trade and Commerce, has very properly emphasized the benefits from foreign trade, which, with mining activity, have been the mainstays of progress. "Mining," says Hon. T. A. Crerar, "gave evidence of leadership by establishing an output record." The Mines Minister foresees a rising gold output in 1938, "while base metal producers have demonstrated their ability to meet any conditions that may arise." Trade, partly a question of policy, depends also upon foreign conditions, and at present there are no indications of a setback.

Speaking for the Canadian Bankers' Association, the President, Mr. S. G. Detsion, states that the most encouraging feature in banking has been the increase in commercial loans, demonstrating increased domestic business and greater confidence. Mr. J. H. Gundy remarks on the continued confidence of investors in Canada's credit integrity, indicated by the general reception and heavy oversubscriptions for Dominion and Provincial offerings at a comparatively low interest rate.

Whether or not the general trend of 1937 will continue through the new year cannot be stated. Manifestly, however, there is no warrant for grave doubts. The symposium of fact and opinion in the Survey is enlightening, well worthy of careful perusal and retention for reference.

## Parties in Honour of Two Brides-to-Be

Miss Ann Scott and Miss Claire Halperin Entertained

Miss Ann Scott, who is to become the bride of Mr. John McClean Grady on January 15th, has been entertained at several delightful parties lately. On Tuesday afternoon, of last week, Miss Marion Ostrosser, of Hemlock street, held a tea in honour of Miss Scott, and Miss Claire Halperin, whose wedding will take place on January 16th. Many friends were present to wish both the brides-to-be a very happy future life.

On Thursday evening of last week, Miss Scott and Miss Halperin, were guests of honour at a dolly shower held by Mrs. A. Renton, at her home on Toke street, where again numerous friends gathered to shower both young ladies with lovely gifts and best wishes.

Mrs. George Drew, of Maple street, held a handkerchief shower in honour of Miss Scott, on Tuesday, January 4th, at which little Master Jack Drew, presented the guest of honour with a lovely parasol to which innumerable handkerchiefs were attached. All their friends in town wish to extend to Miss Scott and Miss Halperin their best wishes, and the students and staff at the Timmins High and Vocational Schools, where Miss Scott taught a few years, all join in wishing her "all the luck in the world" and "years and years of happiness."

Toronto Telegram:—Some of those who come before that commission appear to mistake Mr. Rowell for Santa Claus.

## New Record for Month by Buffalo-Ankerite Mine

Due to treatment of a much higher grade of ore, Buffalo Ankerite Gold Mines, Porcupine district, established a new monthly production record in December, when output was \$299,430 from treatment of 30,514 tons of ore, average recovery being \$9.81 per ton. This compares with production of \$245,300 from 29,307 tons and average recovery of \$8.37 in November.

Production for the year was \$2,823,271, from the treatment of 343,093 tons for average recovery of \$8.23. In 1936, production was \$1,888,829 from 271,736 tons for average recovery of \$6.95.

Total production since commencement of operations in 1926 is \$6,606,735. Tonnage figures for the first couple of years are not available.

## Secured Rich Haul While Woman Slept

Bold Burglars at Rouyn Steal Articles of Total Value of \$334.00.

Rouyn, Jan. 5.—Thieves made a big haul in jewellery and clothing when they entered the home of John Tushkevich at 397 Noranda street last Thursday night between 8.30 p.m. and 10 p.m. Articles to the total value of \$334.00 were taken including a white gold diamond ring worth \$150, 11 dresses amounting to \$78, a beaver coat, \$55, a lady's suit, \$12, a watch, \$35, and a blue leather purse, \$4.

The house was entered in the absence of Mr. Tushkevich, but his wife was sleeping in a room between the front room where the thieves took the jewellery and a back room where they secured the articles of clothing. Mrs. Tushkevich was sleeping with her bedroom door ajar which the robbers closed and then turned on the light to go about their work.

Chief Tissot was not notified of the robbery until about 7.15 the following morning, which lapse of time enabled the thieves to get out of town by the early train if they had so planned.

Another robbery which the police are inclined to connect with that of the Tushkevich home took place the same night at the Lake Shore apartments when the room occupied by Charles Steinberg, apartment No. 7, was entered by means of springing back the tongue of the Yale lock. Clothes to the value of about \$70 were taken, consisting of a man's brown suit, a windbreaker, a pair of breeches and a black leather coat. The hours over which the apartment was entered given by Mr. Steinberg were from 6 p.m. Thursday to 2 a.m. Friday.

### Annual Mining Review and Financial Survey

For many years the annual financial survey and mining review was a feature of The Toronto Globe each year about this time. In recent years The Mail and Empire presented its readers with a similar section. All interested—and that should mean everyone in Canada—will be pleased to note that The Globe and Mail is continuing this traditional service of the two newspapers. Tuesday's issue of The Globe and Mail had a 24-page section devoted to Canada's financial, commercial, industrial and mining interests. The issue is both informative and authoritative. It gives a clear and accurate picture of Canada's progress and stability. A front page article by Hon. Charles A. Dunning, Minister of Finance, suggests that Canada will resume in 1938 her upward climb, after, perhaps, a brief breathing spell. Hon. Mr. Dunning points out that were it not for factors outside Canada's borders there would be full grounds for the greatest optimism about the immediate future of Canada. The viewpoints of bankers, insurance men, merchants, industrialists, the stock exchanges, mining men, and others are comprehensively dealt with in the issue. Very proper emphasis is given to the importance of mining in Canada's prosperity and progress. Canada is well covered from coast to coast from all angles. Some of the special articles are republished in The Advance for the advantage of readers of this paper. The Globe and Mail is to be congratulated on the comprehensiveness and general value of its annual financial survey and mining review.

He is Charles Jenkinson, alias Jenkinson, who on December 18 walked into the Laurier Barber Shop on Main street and attempted to get away with a smoking stand, after breaking the showcase to obtain it. Mr. Desary, the proprietor, grabbed the man and held onto him until the police arrived. On being conveyed to the police station by Constables Picard and Charoux, he tried to escape from the car and again when in the cells made an attempt to break open the cell door. He pleaded not guilty before Justices of the Peace J. A. Forget and C. A. Huennergard, and was defended by D. Goulet. In addition to paying fine and costs he was ordered to defray expenses from damage to the show case which amounted to \$30. The prosecution was conducted by Leo Bureau. Jenkinson had a previous record according to information obtained from Ottawa.

Globe and Mail: Is there anything else that depreciates in value more than a Christmas tree after Dec. 25?

ENJOY YEAR 'ROUND COMFORT WITH

## GYPROC WOOL INSULATION

Insulation is not a luxury. It is a sound investment that gives year 'round comfort and at the same time pays big dividends in fuel saved. In a short time it actually pays for itself—yet it continues to give you genuine comfort for the entire life of the building.

Like a heavy blanket, Gyproc Wool is long fibred and retains its thickness permanently. It is absolutely sanitary and guaranteed fireproof. It protects you from outside heat during summer and stops heat leaking out during winter. Unless you have money to burn, insulate your home with Gyproc Wool. The cost is low.

Gyproc Wool is easily installed... either in a new building or your present one. Simply place the "bats" of Gyproc Wool above the ceiling, between the rafters or in the walls. Anyone can do it. Also comes in a granulated form that is just poured in.
