## Visited at Iroquois Falls While in North

### Some Observations on Timmins and Iroquois Falls.

During the recent visit of the Ontario-Quebec division of the Canadian Weekly Newspapers Association to the North, B. H. Mortlock, The Bowmanville Statesman, visited Iroquois Falls on a side trip in connection with his prominent connection with the Boy Scout movement. The following is a section of Mr. Mortlock's account of the trip North:

"Last summer when we took the Gilwell Scout Leaders Training Course near Acton, four Scout Leaders from Iroquois Falls were among those taking the course. On the train going north we received a telegram informing us that we were expected in Iroquois Falls on Friday night and "we won't take no for an answer." And so at 5:45 p.m. Friday we took the train to Porquois Junction, where we were met by Scoutmaster C. H. Regimbal, of Iroquois Falls, who accompanied us on the bus to the Falls. We had looked forward to this side trip in the hopes of having a quiet visit with our friends and a good sleep. But our hopes were dashed to the ground when we arrived Iroquois Falls to find the Second Scout Troop all on parade to give us a royal Northern welcome. After addressing the lads we went with our Scoutmaster friend to his home and got comfortably settled in a big chesterfield chair when we were informed that the First Troop was awaiting our arrival over at the Anglican Church. And so we hiked over there and attended the meeting and addressed the boys briefly and then got prepared to get a night's sleep.

"However, Scoutmaster Ernie Frowe thought different. His good lady, he told us, was entertaining at his house for their distinguished (?) visitor from the south. And so on we went to a very pleasant evening with the Scout and Girl Guide Leaders (it's all right, we've already told the wife). We had a swell time. Those Northerners sure do know how to be hospitable. After a short but very sound sleep we took the bus back to Porquois Junction and met the newspaper party on their way south to Kirkland Lake.

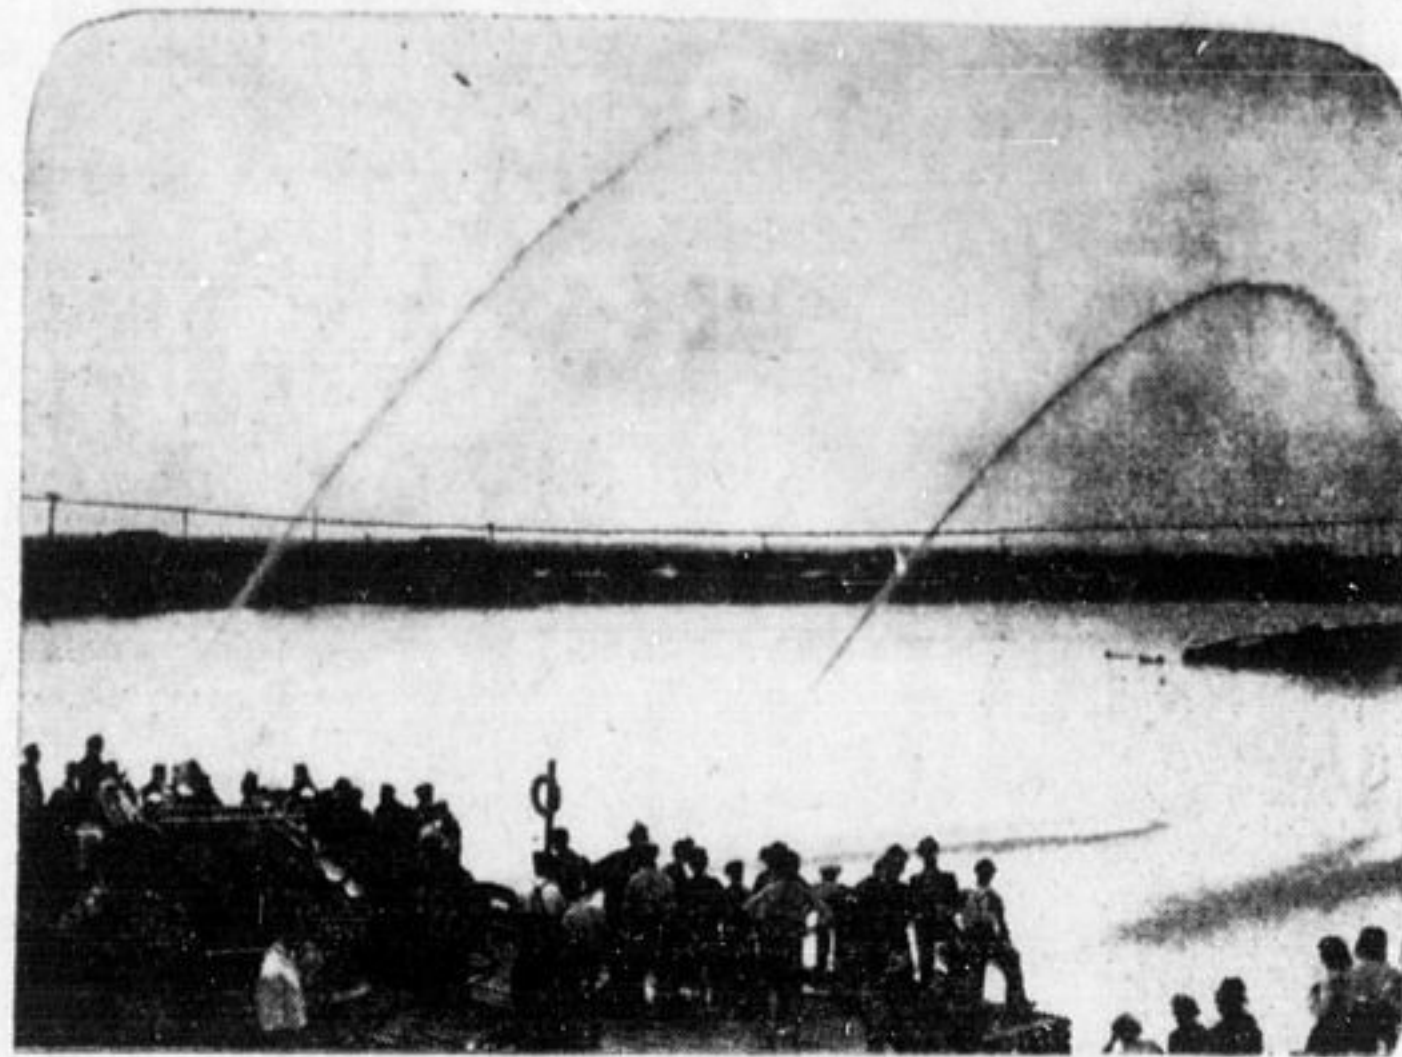

"Before leaving Iroquois Falls we would like to mention a few facts. Practically everyone works at the Abitibi Power & Paper Company plant. The company owns the whole town. Everybody rents houses from the company and they are white stucco, comfortable and roomy homes. The Falls is quite a contrast to Timmins. The whole town is neat and tidy without any shack residences so common in Timmins. The population is about 1,500, but Ansonville, another town only five minutes walk away, has 2,000 population.

"Now to close this Timmins portion of the trip with a few observations. Yes, it is true that the mines payroll is \$5,000,000 per year and that gold production at Hollinger is \$15,000,000 per year, but there are problems. The city has grown so fast that they have to build a school nearly every other year. There are few paved streets, and the roads in and around Timmins are terrible. True there is steady work for the miners, but they hang on to their jobs. Don't run away with the idea there's all kinds of work up there. There isn't. There's plenty of unemployment and want.

"The cost of living is very high. Taxes are even higher, and the next time you hear your government has decided to spend some money on Northern roads, or in special grants to northern school building programs, remember that the need is very great. Don't forget also that \$5,000,000 payroll at the Hollinger Mine means \$5,000,000 spent on supplies from Southern Ontario. Yes, it is very true—Northern prosperity is our prosperity, and unless the South will help the North now, when the need is very great, the north can never contribute all it would wish to contribute to our prosperity in the south."

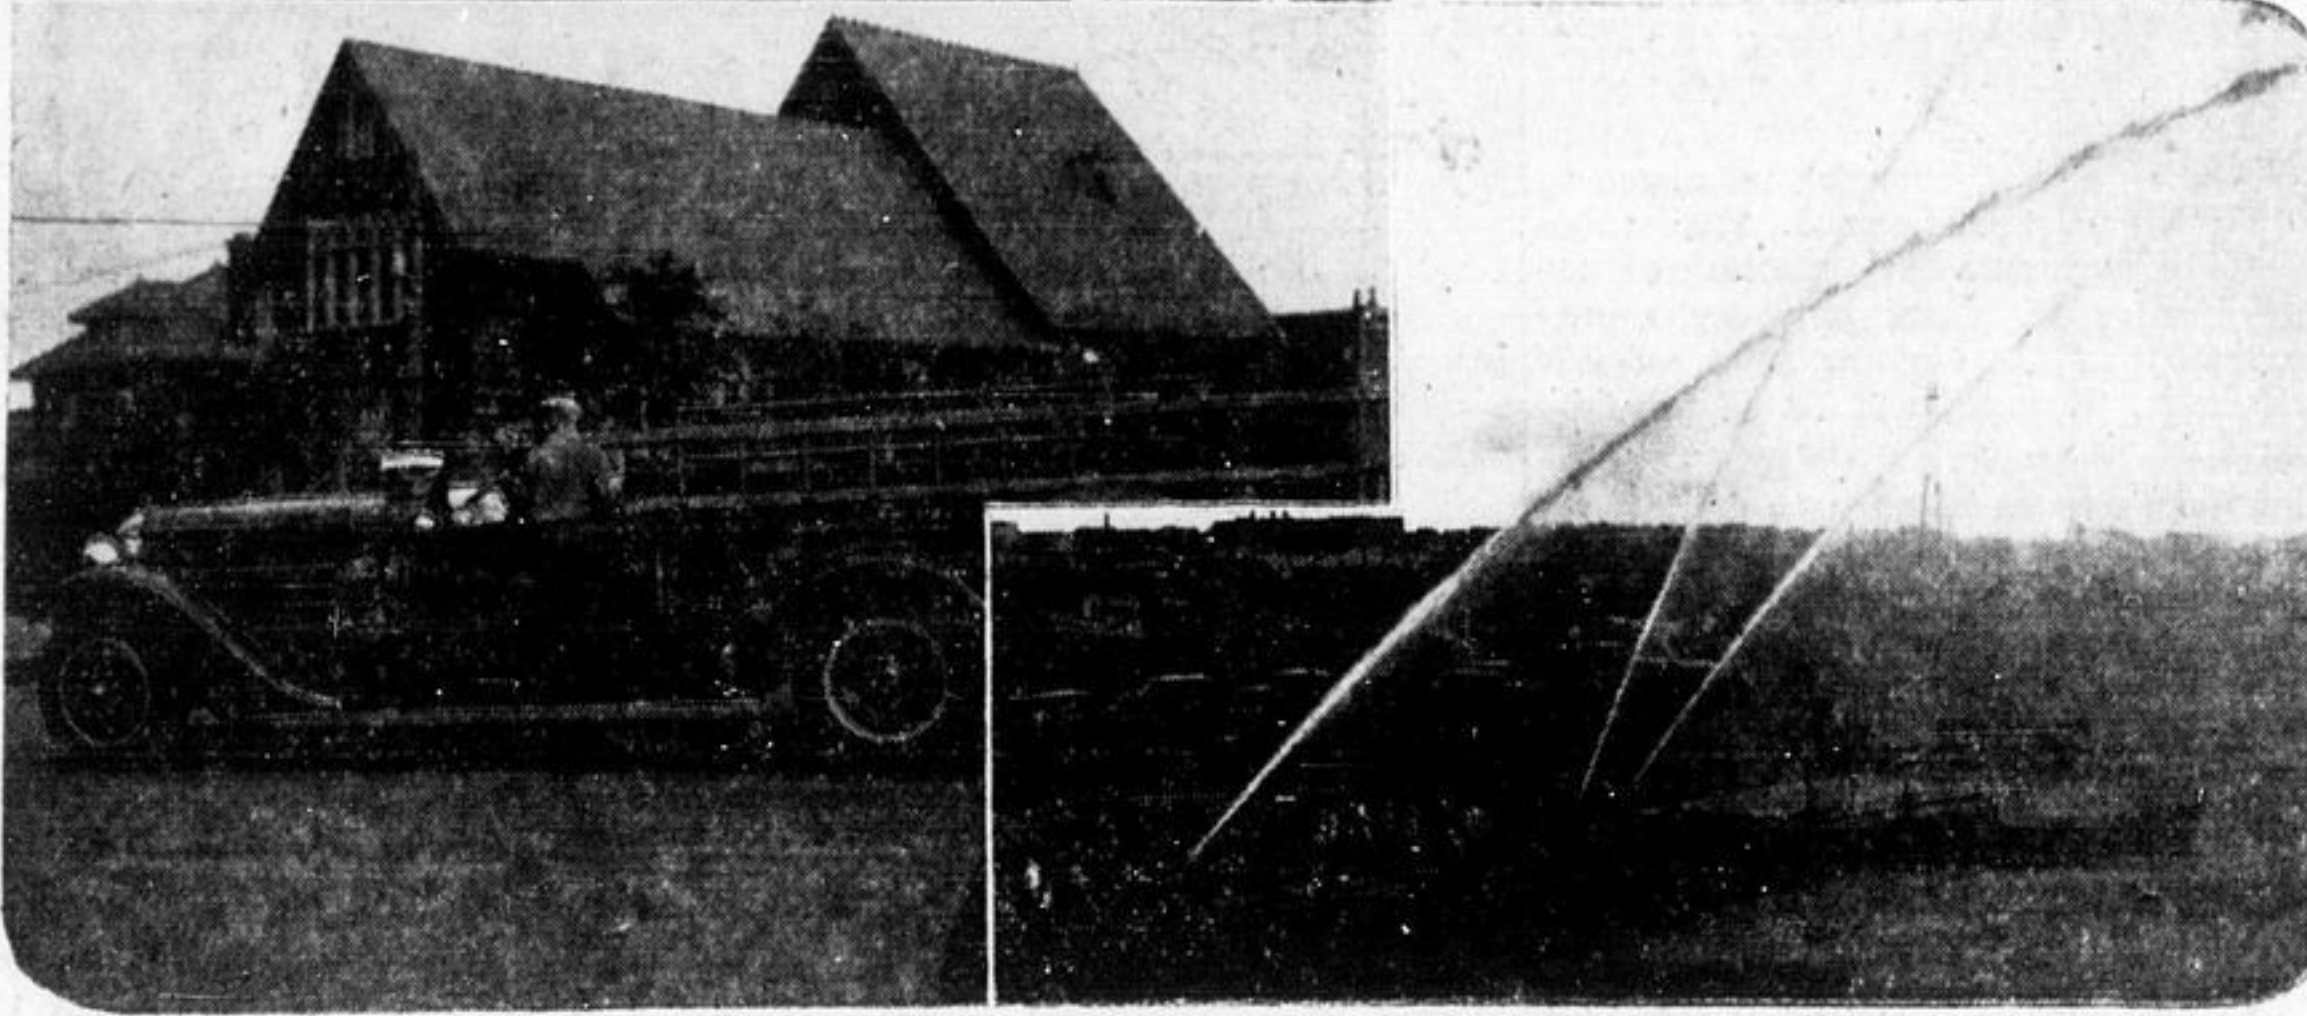

Port Arthur News-Chronicle: Celebration of Decoration Day in the United States, a holiday created for the purpose largely of decorating graves and holding services thereat, was to the accompaniment of 297 lives lost in violent mishaps. The cemeteries, thus probably, were visited by more people on Wednesday than on the Monday holiday.

## NEW TIMMINS FIRE PUMPER IS GIVEN TEST

Promptly on the day it was delivered, members of Timmins Fire Department under Chief Alex Borland, gave the new municipal fire pumper a rigid series of tests at the Mattagami River. A large crowd gathered to watch the firefighters in action and were much impressed with the exhibition. The new pumper, which cost \$15,000, is the last word in modern fire fighting equipment. It has a capacity of 1,000 gallons per minute and is powered with a 12-cylinder, 245-horsepower motor. In the accompanying layout the pumper may be seen in action during the demonstration at the river, while at the bottom left is a view of the powerful new piece of equipment standing on Fourth avenue. Two thousand feet of hose is carried on the rear of the truck, in addition to extinguishers and other apparatus.

## Dominion Mines Dept. to Have 58 Survey Parties

### Ontario Parties to Work in Port Arthur, Sudbury and Other Districts of Ontario. Important Field Work in Quebec and Other Provinces. About 300 Men to be in Dominion Parties.

A total of 58 survey and exploratory parties, comprising a force of close to 300 men have been assigned to field work this year by the Mines and Geology Branch, Department of Mines and Resources, Ottawa. The parties, most of which have already left Ottawa, will map and investigate areas in every mineral producing province in the Dominion and in Yukon and the Northwest Territories.

There are 41 parties engaged in geological investigations and 17 in topographical mapping. Of the former, nine are in British Columbia, two in Alberta, four in Saskatchewan, five in Manitoba, four in Ontario, six in Quebec, three each in New Brunswick and Nova Scotia, two in Yukon, and one in the Northwest Territories. Additional to these, one party is engaged in the collection of mineral specimens in eastern Canada.

Three of the 17 topographical parties have been assigned to British Columbia, four to Alberta, one to Saskatchewan, three to Quebec, one to Nova Scotia, and three to the Northwest Territories. Along with these one party is engaged in physiographic studies in the Eastern Arctic.

The 10 parties being placed in the field by the National Museum of Canada will be engaged chiefly in the gathering of new information on Canadian fauna, flora, and native races, and in the collection of new specimens for the museum. The program includes biological and botanical investigations in archaeological studies in Ontario.

**Ontario**  
Field work in Ontario comprises the geological mapping of the Ignace area west of Port Arthur, and of a section of the province north of Lake Huron, along with oil and gas investigations in the vicinity of Brantford, and stratigraphic studies in the Ottawa-Cornwall area.

L. F. Kindle is completing the geological study and mapping of the 3,000-square mile Ignace area.

H. C. Cooke is commencing an examination of the geology and mineral deposits of a 6,000-square mile area north of Lake Huron and west of Sudbury.

J. F. Caley is making geological investigations of a 3,000-square mile area in the vicinity of Brantford with particular reference to petroleum and natural gas occurrences. A. E. Wilson is continuing stratigraphic studies in the Cornwall district.

**Quebec**  
Field work in Quebec includes detailed geological studies of important mineralized areas; the mapping and investigation of areas where discoveries have been made, or in which prospectors are showing interest; and ground control surveys for mapping from aerial photographs. Geological investigations will cover a total of 1,200 square miles.

H. C. Gunning is completing detailed investigations of the gold-bearing formations in the Bousquet-Joanene area, and B. C. Freeman is commencing a detailed geological study of Varson township.

G. W. H. Norman is completing the geological mapping of a 400-square mile area in the Opemiska district. Commenced in 1937, this work has already disclosed the features that have controlled mineralization, and has indicated areas where intensive prospecting is warranted.

Some 20 miles to the west H. H. Beach is completing the mapping of the Lamarq area; and G. Shaw is commencing an examination of the geology in the Wakanichi Lake area, north and east of the Opemiska area. Another party is completing the geological mapping, and a study of the mineral occurrences of the Clercy district, just east of Noranda.

Three topographical parties headed respectively by H. N. Spence, W. B. Dingle, and J. W. Spence, are engaged in carrying out ground control surveys for mapping from air photographs, in the St. Michele-Vermillion River area, west of the St. Maurice River; the Lake Dumoine area, north of the Ottawa River in the vicinity of Chalk River, and Pembroke, Ontario; and in the Gaspé area, between Matane and Matapedia.

Sudbury Star: An Italian authority justifies the murder of non-combatants by air bombs and says attacks on unfortified cities are necessary. That will give an inkling into what may be expected in the next European war.

North Bay Nugget: Just when Attorney-General Gordon Conant was planning to stop high-grading, \$41,000 in gold suddenly disappears. Was it defiance?

## Sunstroke "Victim" Gives Rescuers "The Run Around"

Would-be "Good Samaritans" who were bathing near the Mattagami bridge at the foot of Wilson avenue on Sunday are the subject of a lot of good-natured "kidding" by their friends this week. Emerging from the water they found a man lying on the bank who had apparently been the victim of sunstroke. Hurriedly procuring a quantity of ice the bathers were giving the man the most careful attention. Opening his eyes at last and giving them the once over the "victim" got up to his feet and staggered away, his only apparent defect being an overload of the "cup that cheers."

## Realizes the Problems Facing the North Land

(An editorial in The Bowmanville Statesman last week, following the visit here of the Ontario-Quebec division of the Canadian Newspaper Association.)

**Serious Problems in Northern Ontario**  
It is difficult for those of us who live in Southern Ontario to really grasp the tremendous problems with which the municipalities of the mining region are faced. In Kirkland Lake for instance the population in one year from 1932 to 1933 increased nearly 4000. That meant the immediate creation of a township the size of Bowmanville, with its schools, streets, waterworks, sewers, homes, stores and other facilities in 12 months. Since 1933 the population has increased another 5,000 which has meant the same thing all over again. From 1932 to 1936 some 2,101 buildings were erected and there was evidence of a building boom while we were in the north.

To get some picture of the situation one must realize that the only industries are mines. Of the taxes paid by mines the federal government gets 64 per cent., the provincial government 28 per cent. and the municipality only eight per cent. Yet it is true that the greatest expense in connection with growth of these mining mushroom cities is on the shoulders of the municipality. It is to be hoped that both the federal and provincial government will see the need of the North and do the same for the North that we of the south would expect. If any southern town was faced with same immense problems it would naturally expect government aid. The population of the northern cities comes from all over Southern Ontario, and the whole province owes it as a duty to the North to aid in the erection of schools and the building of roads. Having been on the spot and having seen the need we have every sympathy with the problems faced by such cities as Kirkland Lake and Timmins.

## Many Applications For Kiwanis Camp

### Members of Club to Interview Boys and Select Most Deserving Cases

With accommodation available for 132 and applications to date totalling 365, the committee of the local Kiwanis Club are facing a difficult task with regard to their annual camp for boys. The question was discussed at some length at the regular weekly luncheon on Monday and members of the club will interview the various boys wishing to go to camp and pick the most deserving cases. The camp will be open during the months of July and August, with four separate camp periods of two weeks each. Charles Jolliffe, will be supervisor of the camp again this year.

At each camp a leader will be selected as a guide and example to the other boys in the carrying out of camp duties, general conduct, manliness and sportsmanship.

F. A. Burt, chairman of the carnival committee, also spoke at the meeting and discussed a number of matters in connection with organization for the big affair on Friday and Saturday of this week.

Two visitors, J. Lefcoe and H. E. Cohen, of Montreal, were introduced to the meeting by Sam Bucovetsky.

## Two Drunk Drivers Sentenced to Jail

### Oscar Korella Gets 30 Days and Harry MacLachlan 15 in South Porcupine

Pleading guilty to a charge of being drunk in charge of a car, Oscar Korella, of McDonald Hill, Deloro Township, was sentenced to thirty days in jail and his car was ordered impounded for a period of three months by Magistrate Atkinson in South Porcupine police court Tuesday morning. Evidence was to the effect that the accused had run into the ditch, injuring his wife and causing considerable damage to his car.

Harry A. MacLachlan of Golden City, was sentenced to fifteen days in jail on a similar charge and will also have his car impounded for three months. The accused was alleged to have collided with another car near Pamour during the heavy storm of last Saturday, causing damage estimated at \$123.

## Sioux Lookout Protests Abandonment of Railway

(From Sudbury Star)

In opposing the proposed abandonment of Canadian National Railways lines through the North Country, as part of the unification plan, the town of Sioux Lookout has presented a good case to the Senate committee which is inquiring into the railway situation.

Taking into account the extraordinary development of the mineral fields in Northern Ontario during the last decade, tearing up of the rails would mean a serious handicap to a great many of the new mining camps. Mayor John L. Moran, of Sioux Lookout, stresses the point that within a radius of 100 miles from that town there are no less than seven producing mines, of a market valuation of \$28,500,000, and in addition there are nine mines that will likely be brought to a producing stage, which have a total value of \$22,500,000. It is not difficult to visualize what it would mean to this growing industry to remove the railway service.

The lumbering and pulpwood industries and the communities that exist as result of their activities would be seriously hampered by the abandonment of rails, and in this sense the northwestern part of the province would be most adversely affected.

It is quite natural that those who have helped to build up the North, explore its rich resources and establish growing communities would oppose any retrograde step. It would appear that if the mining industry is to continue its expansion in the North Land, it can ill afford to do without the transportation facilities it now has.

St. Mary's Journal-Argus: Pretty Girl: "Can I see the manager?" Office Boy: "Oh, yes, the manager will always see pretty girls." P. G.: "Well, tell him his wife is here."
