Gold in Rocks Exposed by Carelessly Kicking Moss

The following from The Sudbury Star has a familiar sound, so far as kicking the moss is concerned, but it tells the story in interesting way:-

"A careless-booted piece of moss, along a lake shore in Osway township, west of Gogama, is credited with uncovering the gold-bearing rocks which have resulted in a prospectors' rush into that section of the country, according to reports current in Sudbury to-day. The moss was kicked aside by Bert Jerome, Mining Corporation field man, and the rock which he uncovered in this unconventional fashion is said to have developed into an ore-bearing vein, 18 feet wide in places.

"Prospecting parties are continuing to flock into the area, mid-way between the scene of the Three Duck Lake and Swayze rushes of six years ago. Jerome has nine claims recorded for Mining Corporation, it is stated, but other parties, already in the field, have not returned to Sudbury. The first of these parties is expected to record their claims Saturday.

three other parties of prospectors and mining engineers have flown into the Opeepeesway Lake country in the past two days, one going from Timmins for one of the larger gold-producing companies. Another company, specializing in development work, is reported to have a field man in the Osway township area, with instructions to from the animal kingdom. The weasel acquire ground and return, awaiting that preys on chickens, naturally general developments in the new field. A number of ground parties have left to survive. Gogama by canoe, heading westward and ostensibly bound for the new discovery.

"Jerome, original discoverer of the new find, is reported to have been in Osway township area for a number of weeks before coming across any encouraging signs. Travelling through a and their deadly enemies are coopers marshy swamp one day, he is reported to have kicked over a piece of heavy moss only to find the rock underneath. His curiosity piqued at finding rock in a marshy area, he investigated and unclaimed to have assayed up to \$70 per

Kerr-Addison Mill Now Treating 700 Ton per Day

Kerr-Addison's new gold mill is regularly treating 700 tons per day and operating costs have been reduced to the low figure of \$3.09 per ton. As millheads are holding close to \$8 per ton on the average, the splendid operating profit of between \$4 and \$5 per ton is being made in current operations. The mill has done 715 tons and eventually will probably work up to 750 tons daily

Unusually rich ore has been develop- used by the Kingsville naturalist to reed lately west of the shaft on the 500- fute the point recalls early days in foot level. One stretch 40 feet long North America, when 90 per cent. of

ran exceptionally high grade with as much coarse gold evident as seen anywhere else in the mine. This high grade is believed to connect up with the high grade ore cut from 530 to 750 feet

Underground operations have settled away now into a lengthy campaign of to justify doubling present mill capacity. This program will probably carry well into next year and if ore reserves can be doubled by that time, say to two and a half million tons, then decision can be given to installation of a dupli-

Miner Says: "Must Control Wild Life'

Canadian Nature Lover Gives his Views on Conservation.

(By Lance Connery)

Despite his love for wild life, a fundamental part of Jack Miner's philosophy is his belief in man's dominion over all. "Authoritative reports indicate that The Kingsville naturalist, now in his seventies, holds that man must control and protect useful birds and apimals, and sometimes kill the harmful ones.

The control and balance of Nature is largely left with man, he believes. Just as gardens must be weeded if their produce is to live, so must the undesirables be controlled or eliminated enough, must be killed if the fowl are

Birds Have Deadly Enemies

One of North America's greatest assets is its wild life, and if man expects it to remain so, he must control its enemies, says the naturalist. Mourning doves, native sparrows and similar birds are perhaps the most valuable, far country." (Proverbs, 25, 25). such feathered killers is absolutely essential, in Jack Miner's opinion.

Red-tailed deer have many foes principally wolves, who hunt every day covered the vein. Channel samples are of the year and observe no closed season. If the deer are to increase, the wolves must be killed. The argument of some is that the wolves are in themselves a natural controlling force, and that by interfering with this force man is only paving the way for such an increase in the number of deer that disease will eventually wipe them out

Naturalist Has One Answer To this Jack Miner has one answer. It is that, even if such were the case it would be far better to have excess deer killed by man for food than to have them ravaged by wolves and left to die, with no useful purpose served. Others use the same argument in respect to bird life. The illustration

birds on the continent were passenger pigeons, now extinct. If man is to depend on Nature preserving the balance, then the same percentage of the passenger pigeon's enemies should have Ashley disappeared with their extinction, he Base Metals holds. Instead they flourished, and are Big Missouri today preying on even more valuable Beattle

Control, Not Extermination "I never use the word 'extermination'." the naturalist observes, "but I believe in control, whether it is of insect, plant, bird or animal life." He uses Ida M. Thomas' poem, "Mak-

ing a Garden," as a fitting illustration of his philosophy. It reads: Man ploughs and plants and digs and

He works with hoe and spade; God sends the sun, the rain, the air; And thus a garden's made. He must be proud who tills the soil And turns the heavy sod. How wonderful a thing to be In partnership with God!

Says Harry Oakes **Kicked Into Millions**

Romantic Story in London Kerr Addison Paper About Northern Mine Man.

Kirkland Lake, Aug. 4-(Special to The Advance)-So completely strapped financially that he could not pay his fare and was thrust forth forcibly from the train by a flint-hearted railwayman with a hidebound devotion to company rules and regulations, Harry in the shaft that averaged \$110 per ton. Oakes literally was booted into McWatters prosperity when he was ejected from the Mining Corporation cars right at the side of the famous developing and exploring sufficient ore Lake Shore gold mine, according to an exclusive story reaching Northern Ontario this week direct from ole Lunnon itself. Identity of this crude Colonial conductor-he must have attained that rank, although the ": ws" item terms him a guard in the best coaching traditions—is evidently a closely-kept secret Paymaster and efforts in the North to penetrate the veil to date have proved futile, but it is hoped that Colonel Malcolm Lang. chairman of the T. & N. O. Commission, and A. H. Cavanagh, the general manager of the Ontario Government road, can be persuaded to institute an enquiry with a view to solving this mystery. Neither official was available today, however.

The information, of a nature calculated to provoke some astonishment in mining circles, comes across the pond from no less an authority than a Fleet Street oracle, reinforced with the prestige of the daughter of an ancient Scottish Border house who has married into Royalty, and is carried on a page of The Over-Seas Daily Mail bearing for its motto a verse from the Old Testament. To any who may doubt its authenticity, they are referred without prejudice to page three of the issue of the publication already noted, and bearing as its date July 23, 1938. The contributor of this new chapter to Ontario's mining history describes himself as "One Wanderer Returned," although from where is not indicated and not far above the heading "Kicked Into Millions," which adorns his effua thirsty soul, so is good news from a

Canadian multi-millionaire, made his \$158,225, or \$4.29 a ton. richest gold fields in Canada. His income now is said to be close on 1,000, 000 pounds a year!"

That's all, and the story leaves the reader in the North in a dissatisfied state of mind because of its lack of further details. He is willing to over- ber, 1934, now stands at approximately lock the geographical discrepancy \$1,906,581. which locates Kirkland Lake on the main line of the Temiskaming and Says Mining Industry Has Northern Ontario Railway and south of Cobalt at that, but what he wants to know is how that railwayman who kicked away, perhaps, HIS fortune, was from the last issue of The Northern attired, for instance. Mill is 90 currently producing at approximately 52.00 | 1500 tons per day at a lower grade than 3.50 the first two quarters but still above 4.80 the average ore reserve figure of \$6.15 4.05 indicated in the last annual report. Shaft has been sunk from the 1000-47.00 foot level to the 1600 level and will 1.23 reach a depth of 1900 feet before the 81 end of the year. The ore-pass system 2.05 is being extended to a crusher station 1.87 on the 1000 level. New loading pocket

74.50 Development work still continues on 1.66 the 200, 400, 600 and 800-foot levels. 3.80 New dry house is under construction. 63 also a new office building and two staff 4.35 houses. Approximately \$270,000 has 53 been spent on development in the past 4.95 six months.

It is hoped that operating costs at-1.75 tained since tonnage was increased will 2.25 continue through the year.

1.24 Rare Riot Rocked Roc d'Or Recently

Puritan People Phoned Provincial Police Pronto.

(From Val d'Or News) Aftermath of the battle which took place in Roc d'Or Tuesday afternoon was the arrest by Provincial Police of fcur who were charged with vagrancy and later released on payment of fines of two dollars and costs. Police point out that a provincial detachment will soon be stationed at Malartic.

In the absence of all police control and in spite of repeated calls from Roc d'Or residents trying to locate Provincial Police officers in the district, the payday aftermath in the village Tuesday this week was a riot which raged for an hour around a shack, east of main street. Attackers smashed windows, broke in the doors, swung cord wood and eventually departed amid a barriage of beer bottles as the defenders of the shack collected reinforce-

One man was knocked cold with wound in his head and others left with bruises more or less serious.

It all started, according to witnesses when a crowd of about six who "had chviously been drinking" approached the shack and asked to be let in. The man on the door took stock of the situation, thought back rapidly to previous similar situations and said they couldn't

The would-be guests allowed that that was OK but that they were coming in anyway. They collected various weapons and soon had windows smashed in and began battering at the barred door. The door yielded just about the same time as the noise attracted friends or relatives of the beleagued inhabitants and open skirmishing around the shack ended with one man being slugged with a piece of cordwood and another going down with the butt end of a canthook. Others began sniping from the roof with beer bottles and it was not long before the attacking forces retreated across main street where they lined up and began hurling vitriolic "Encouraged by assurances from pro- epithets at the opposition which took a stand on the other side and waited

Record Rainfall at Iroquois Falls

July Rain Exceeds All Pre- panied the damaging rains. vious Records for Iroquois Falls District.

Iroquois Falls, Ont., August 3, 1938-(Special to The Advance)—Surpassing all previous records, rain fell in the Iroquois Falls vicinity during the month of July, 1938, to the total of 8.03

Never before in the history of the Government records being kept here has the figure been so high for one month, the nearest one being in July of 1917, when a total of 7.84 inches fell. September of 1921 was also a wet month, when 7.32 inches fell. October of 1932 has a heavy rainfall with 6.28 inches totalled.

Since 1915 the official records for this territory has been recorded here, and July struck a new high.

During July, as much as 2 inches of water fell in less than 2 hours of time. coming down in torrents, washing out everything before it. During the latter part of July, showers of hail accompanied the rain, but was not severe enough to do any great amount of damage to crops. Farmers, gardeners, and others have

been set back with the heavy down

High winds prevailed, as the low the province for the course.

heavy clouds passed overhead, and the sweeping rains prevented visibility farther than 50 feet ahead at the peak of the down pours. Thunderstorms and lightning pretty nearly always accom-

Depressing, discouraging and damaging, the weather is the worst in history here, with very little sunshine breaking through the ever prevalent clouds.

Youth Training Plan Again at Haileybury

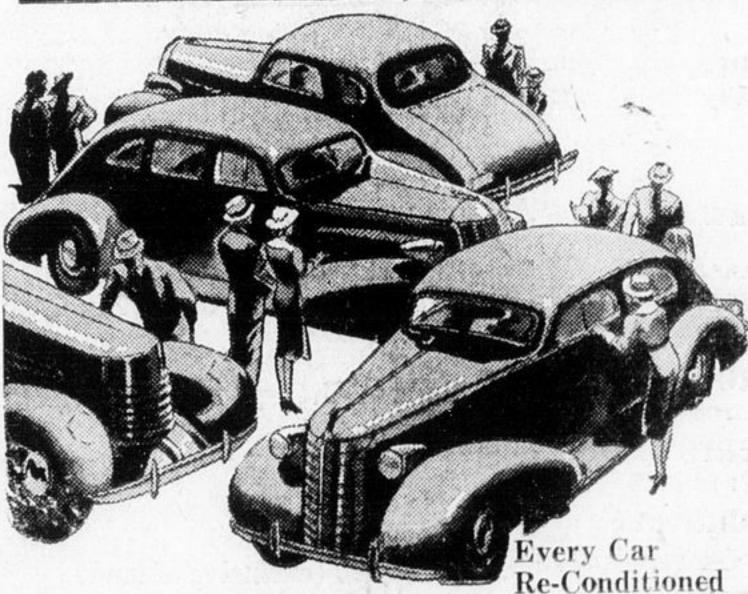

Course in Mining Starts in September at Haileyoury

Under the Dominion - Provincial Youth Training agreement, which was carried out during the fiscal year 1937-38 and is being repeated in 1938-39, a course in mining will be given at the Haileybury High and Technical School.

The course will begin in September and will last for approximately six months. Applicants for this course must be between the ages of 18 and 30 years, and must be in excellent physical condition. They must have their junior matriculation or its equivalent, with preference given to students who have standing in Upper School mathematics (including trigonometry)

This Youth-Training Project is intended especially for the unemployed. pours, not being able to harvest the Applications should be made at once abundant crops which still stand in the | to the Deputy Ministers of the Departfields.
