CANADA'S FIGHTING FORCES GETS SOME MODERN WEAPONS

Men from various units of Canada's fighting forces, now training for manoeuvres at Camp Borden, Ont., are shown ABOVE, being instructed by officers in use of the modern Bren machine-gun, now used by Britain's armies. It can be used in infantry machine-gun work and also mounted to serve as an anti-aircraft gun.

Gold Strike May be One of the Biggest

Many Claims Staked in
Yellowknife Area.

(By Winston Norman of The
Globe and Mail)

Yellowknife, N.W.T., Aug. 14.—What may turn out to be one of the most spectacular gold strikes in Canadian history, made July 22 on a lake thirty miles east of Yellowknife, was today made public by Fred W. Thompson, veteran prospector of Halley Bay.

I visited the find by airplane several days ago and got the story from Thompson, under pledge of secrecy. I saw gold in seams and nuggets on quartz outcrops, and powerful quartz veins in the hitherto despised "hot" sediments.

Thompson, who came to the Yellowknife rush with his brother, Robert, last April, made the find in company with Roy Lundmark of Wabigoon, Ontario. They were put down at discovery. They were put down at discovery. They were put down at discovery.

Future Assured
Associated with Thompson are Glyn Burge and Murdoch Mosher of Toronto. Adjacent claims have been staked by Bert Airth of Toronto for Gypsy Yellowknife Syndicate. Other stakings in the immediate vicinity have been made by Alex C. Mosher and Henry Lajeunesse for Almo Syndicate; Dolan Exploration Trust; Chuck McLeod for Con West; Joe Rankin and Martin Shunsky for Lee Gold and Athona; International Mining Corporation; Prospectors' Airways, and others.

Found by Plane
Thompson made his original discovery from an airplane while flying over a desolate and weirdly folded area of rock. "I first saw veins from the air about six weeks ago," he told me, "and had been trying to get over here ever since. Miller brought Lundmark and me and put us down on this lake. We made a traverse, and two hours after we landed we found free gold a quarter of a mile from the lake, in one of three parallel veins each about five feet wide.

"We started staking right away. In the course of staking we ran into a number of other veins which panned. Since that time we have been averaging a discovery a day, either high grade gold or rock which pans."
Most important of all the veins uncovered by the Ontario prospector is "Treasure Island." On this little patch of rock and muskeg, surrounded by waters of the nameless lake, I saw a quartz vein exposed for sixty feet with thirty-five foot width. I saw free gold gleaming under two feet of water where the lake slime has been scrubbed away, and handfulls of uncrushed muck which leave a heavy tail in the pan, mixed with coarse gold.

Discovery on Island
On a larger island of some twenty acres, separated from Treasure Island by a fifty-foot narrows, the continuation of the wide vein yields even richer gold samples. I saw a grab sample of quartz weighing a quarter of a pound, shot through with free gold, one side showing a gold slab two inches long and half an inch wide, shaped like coral. Regarding the discovery of what he calls Treasure Island, Thompson said:

"When we began staking on July 22, we had no canoe. I got them to fly in a collapsible canoe for us. On July 26, paddling home from staking, we saw quartz on this little island. We went ashore, panned it, and got a good tail of gold. The following morning we went over and started picking up high grade. Then we got busy with the

scrub brush."
The course gold on the larger island, comparable to that found in the Mother Lode of California, was broken out on Aug. 7. Thompson's party had seen quartz there, but were too busy to investigate it until they "went over to see what the quartz was doing."

Englishman Discoverer
In many of the veins along two miles of high grade showings found so far, free gold occurs not only in the quartz, striking generally north-west-south-east, but also in the slate, schist, greywacke, and the wall rock of metasediments outside the quartz. How large a showing occurs on the lake bottom can only be guessed from the high grade veins on Treasure Island and the larger island.

Fred W. Thompson, the discoverer, was born in Crofton, England, served six years in the British Navy, started prospecting in Canada in 1908. He served four and a half years in the World War, going over as a private in the Borden Machine Gun Battery and returning as a captain in the Yukon Battery. He has a wife and three daughters in Noranda. He is planning now to get a small yacht and take up sailing again after thirty years, this time for pleasure.

Find Confirmed
The following statement was authorized last night by Murdoch C. Mosher: "With regard to our (the newspaper) reports of the new Yellowknife find, Mr. Murdoch C. Mosher, one of the prospectors who was on the ground when the staking was done, confirms that an important find has been made east of Sparrow Lake. He describes the discoveries as extensive and containing spectacular showings in some parts. No work has been done on the property. As yet there is no official information from the owners concerning the particulars or extent of the discoveries, except that there are a large number of parties interested."

As to rumors concerning Mosher Long Lac Gold Mines Limited, Mr. Mosher states that that company, of which he is the president, holds 12.73 per cent. interest in the original stakings.

(Signed) Murdoch C. Mosher,
Aug. 16, 1938.

Kirkland Woman's Death Due to Injury in Crash

North Bay, Ont., Aug. 17.—That Mrs. Philip Pearson, Kirkland Lake, came to her death, as a result of injuries in an accident while a passenger in the car of Norman Ruebottom, of Toronto was the verdict reached by Coroner Dr. D. A. Campbell, at the inquest held Tuesday afternoon.

The accident happened at the intersection of Ferguson street and First avenue here at about 12.20 o'clock a.m. on July 24 when Ruebottom's car was in collision with another, driven by Wilfred Johnson, Windsor. On August 7, Mrs. Pearson died from meningitis caused, Dr. S. W. Bromley testified, by a severe fracture of the skull.

Three eye-witnesses, O. N. Ginsberg, Syd. Cohen and Charles Gerencsich, all testified the Ruebottom car was travelling at an excessive rate of speed. All three said the Johnson car was partly out of the intersection when struck.

More British Money for Ontario Mines

Leading Industrialist Supplies Personal Funds for Shiningtree Mine.

(From Globe and Mail)

During the brief visit of Lord Davies of Llandnam, Montgomeryshire, Wales, last Friday, the finishing touches were given to an important mining deal in the Shining Tree area, by which the British industrialist acquired 60 per cent. of the capital stock of Ronda Gold Mines for sufficient personal funds with which to bring the property to production.

Lord Davies is one of the largest coal producers in Wales as head of Ocean Collieries, with mines in Glamorgan-shire and Monmouthshire in the Rhondda Valley, has sat for twenty-three years in the House of Commons; is a director of Great Western Railway and of the Midland Bank; President of University College of Wales at Aberystwyth; President of the National Libraries of Wales and founder and chairman of the New Commonwealth Society, working for European amity through the League of Nations.

It is our understanding that the Ronda investment is of a wholly personal nature, with funds to be supplied as necessary and the payment of a very substantial amount on Friday.

Equipment will immediately be ordered for a 125-ton straight cyanide plant and, according to President E. H. Dickenson, work of construction is to start immediately with the object of having the plant in running order before the first of next year.

Last October, when the writer visited the mine, the main shaft had been completed to the 300-foot level and a three-compartment internal shaft had been carried down from that level and was then at the 494-foot mark. Another level had been opened at the 425-foot horizon and a crosscut had reached the vein at about 40 feet from the shaft, showing between 4 and 5 feet of good-looking quartz.

Since then the internal shaft has been deepened to the 700-foot mark and a statten cut at the 550 level, where crosscut exposed the vein with width of 7 feet and average values running from \$10 to \$12 a ton, with some channel samples yielding as high as \$22 a ton. Statten has also been cut at the 675-foot level, and diamond drilling has shown that the vein will there be reached by crosscut in about 100 feet, as it is dipping at about 65 degrees to the southwest, or away from the shaft. This work will be carried on while the internal shaft is being holed through to surface.

The main work in hand now is raising from the 300-foot level to hole out the three-compartment internal shaft, which will then be equipped with a

new mining plant capable of use to great depth, and the shaft will then be used as the main entry.

Final steps toward erection of milling plant have been held up for some time while negotiations for extension of power line from Abitibi Canyon hydro-electric plant, about thirteen miles away, were concluded, and it was understood there is now every reason to expect that the connection will be made in time to actuate the new plant.

As Lord Davies is among the most important industrial figures in Great Britain, the deal is looked upon as one of great importance; possibly the forerunner of far heavier investments in this Dominion. We understand that the Ronda investment is by no means the first Lord Davies has made in Ontario, as he is reported to be a heavy holder of Lake Shere, Noranda and other leading mining issues, all acquired at far below the present levels.

Closing of the deal through Canadian Securities in Toronto on Friday means withdrawal of all treasury stock from the local market. Capital used in development of the mine since last November has been supplied by Lord Davies.

Drilling Campaign Commenced Today

Extensive Examination of
Presdor Porcupine Starts
—Holes Spotted Wednesday.

An extensive diamond drilling campaign was commenced to-day at Presdor Porcupine Mines on their property immediately adjacent to Preston East Dome. Drill holes were spotted on Wednesday by Hamlin B. Hatch, the company's consulting engineer. The drilling contract has been awarded to the Auric Diamond Drilling Company, of Toronto.

Continue Drive on Porphyry Contact

Work Proceeding at Gillies
Lake—Option on 50,000
Shares Not Taken Up.

Hamlin B. Hatch, consulting geologist at Gillies Lake Porcupine Mines announced to-day that the porphyry mass indicated some time ago by diamond drilling has been intersected by the new crosscut on the 500-foot level of the property. At the present time a drive is being made along the south contact of the porphyry.

John F. Conroy, Jr., of New York, hold an option on 50,000 shares of the company's stock at 17 1/2 cents per share due on August 12 but the option was not exercised and lapsed by default.

Baghdad-Larder to Resume Operations

Arrangements Made for Finances with President of Junior Golds Securities Corporation.

Baghdad-Larder Mines Ltd., announce the re-opening of the Walsh-Katrine property in Larder Lake which they purchased last year. Financial arrangements have been entered into with W. J. Lawson, President of Junior Golds Securities Corporation, Ltd., which when completed in full, would net the treasury over \$150,000 and would leave 1,000,000 shares in the treasury for further financing and mill construction.

During the past three years, Junior Golds Securities Corporation have successfully brought two mines through to production in the Kirkland Lake area. Former operators report the development of a considerable amount of commercial ore on the 140 ft., 250 ft., 375 ft. and 500 ft. levels at the Baghdad, while the main vein has been traced for over 1500 feet on the surface.

A new road is being constructed to the property and dewatering of the shaft and workings will be started as soon as the plant has been reconditioned.

Further development of Baghdad-Larder Mines will be under the direction of S. A. Pain, chief consulting engineer for Junior Golds Securities Corporation, Ltd.

Globe and Mail.—It is understood that the Japs have received assurances of Germany's sympathy. They can also count on Italy's. But the little brown brothers have not been sufficiently educated to accept this as a suitable substitute for military assistance. This resulted in the stakers asking for a fiat to go to court, which

ANNOUNCEMENT

BAGHDAD-LARDER TO RE-OPEN

This interesting property in the Larder Lake area,
was formerly known as the Walsh-Katrine.

Equipped with a complete mining plant, the shaft is down 525 feet with an excellent grade of commercial ore developed on the levels at 140'-250'-375' and 500'

S. A. Pain, M.E., has been retained as Consulting Engineer in control of operations. Mr. Pain successfully guided Bidgood Kirkland and Golden Gate through to production under the sponsorship of Junior Golds Securities Corporation Ltd. Baghdad-Larder Mines, Limited will be given the same concentration of effort for like objectives and achievements.

We recommend the immediate purchase of Baghdad-Larder at the market. This stock may be purchased through your own broker, banker or direct from us.
